Hydrogen transfer experiments using Powhatan No. 5 bituminous coal (Pittsburgh Seam) and labeled solvents are complete. The liquefaction runs with d4-tetrain were made at temperatures of 300 to 4500 C and at run times of 0, 10 and 30 min; additional runs were made with d12-tetralin at 400 and 4500 C. Product samples were examined by (2)H-NMR to observe the site of deuterium transfer. The relative distribution of deuterium was primarily influenced by reaction temperature and not run time in spite of a major change in the absolute amount of hydrogen transfer with run time. Much of bituminous coal liquefaction occurs during the reactor heat-up time even though a low level of hydrogen transfer occurs. Therefore, the subsequent hydrogen (deuterium) distribution is strongly influenced by up-grading type reactions that occur. Hydrogen/deuterium exchange occurs to a sizable level at the severe conditions of coal liquefaction; this strongly affects the distribution of deuterium in the products. This exchange is enhanced by the pressure of heavy aromatic species and by mineral matter and unconverted coal solids. DOE

DEVELOPMENT AND APPLICATION OF ANALYTICAL TECHNIQUES TO CHEMISTRY OF DONOR SOLVENT LIQUEFACTION Quarterly Progress Report, Jan. - Mar. 1981
H. C. Dorn and L. T. Taylor Jul. 1981 20 p refs
(Contract DE-AC22-80PC-30041)
(DE81-025961; DOE/PC-30041/T5) Avail: NTIS HC A02/MF A01

The operation of modern superconducting magnet based spectrometers in the liquid chromatography-proton nuclear magnetic resonance spectroscopy (LC-(1)H) NMR mode is fairly simple. In light of the considerable improvements made in this technique, LC-(1)H NMR has shown itself to be quite useful in fuel analysis. The limits of detection are now sufficiently low to be near that of the refractive index detector. Improvements in resolution (both chromatographic and spectroscopic) have made speciation within a class possible. The LC-(1)H NMR technique increases the convenience and reliability of determining the average degree of substitution. Results are reported of runs made on a jet fuel and a model mixture which was prepared by mixing n-butylbenene, m-xylene, tetralin, naphthalene, dodecane, isooctane, n-hexane, nonane, hexadecane and n-pentane. CATALYST AND REACTOR DEVELOPMENT FOR A LIQUID-PHASE FISCHER-TROPSCH PROCESS Quarterly Technical Progress Report, 1 Jan. - 31 Mar. 1981
J. W. Brockington, Paul N. Dyer, Ronald Pierantozzi, Barry W. Brian, and Jeffrey V. Bauer Apr. 1981 47 p refs
(Contract DE-AC22-80PC-30021)
(DE81-028209; DOE/PC-30021/T4) Avail: NTIS HC A03/MF A01

The computerized literature search of Fischer-Tropsch literature was continued, refinements in analytical procedures were implemented, the first 300 mL slurry reactor was completed, and catalyst screening tests were begun in the 15 mL gas-phase tubular reactor. Two of ten modified conventional slurry catalysts were prepared. Two batches of one of these catalysts, representing different pretreatment procedures, and a baseline Fischer-Tropsch catalyst were tested in the gas phase reactor. Eight metal cluster catalysts were screened in a gas phase reactor. Construction of the cold flow reactor simulator was completed and initial experiments begun. The persistant foaming problem associated with the use of kerosene as a cold flow liquid was overcome by using a C (9)-C11 isoparaffin mixture instead of kerosene. DOE

(DE81-028474; ANL-81-30) Avail: NTIS HC A03/MF A01

Microprobe studies of reaction layers on refractories exposed to a high (20 wt percent) iron oxide acidic coal slag suggest that the amount of iron oxide in the reaction layer immediately adjacent to the slag increases significantly as the chromia content in the refractory increases. Waveguides were installed at the SRC pilot plant to monitor erosive wear. Installation of the ANL-designed erosion scanner at the Exxon Coal Liquefaction Pilot Plant was completed. Nondestructive tests of the HYGAS high-pressure cyclone separator showed that the cyclone internal cone has eroded through in some areas. Evaluation of wear of the METC tar-separator cyclones and solids-separator cyclone continued; the addition of B4C hardfacing has reduced the wear rate in one of the tar cyclones. Preliminary tests were conducted on the capability of an electromagnetic acoustic transducers to measure wall thickness. Work on passive acoustic methods to detect leaks in block valves continued. Work continued to evaluate the effect of combustion gas stoichiometry and deposits on the corrosion behavior of air and steam heat-exchanger tubes. Results indicate that high-chromium alloys such as Type 310 stainless steel exhibit a protective Cr oxide layer in the absence of a deposit. DOE

MANUAL OF ANALYTICAL QUALITY CONTROL FOR PESTICIDES AND RELATED COMPOUNDS IN HUMAN AND ENVIRONMENTAL SAMPLES
Joseph Sherma Apr. 1981 468 p refs
(Contract EPA-68-02-2474)
(PB81-222721; EPA-600/2-81-059) Avail: NTIS HC A20/MF A01 CSCL 07D

A systematic protocol for the quality control of analytical procedures and the problems that arise in the analysis of human or environmental media is provided, as well as a guide to the latest and most reliable methodology available for the analysis of pesticide residues in these and other sample matrices. Inter- and intra-laboratory quality control, the evaluation and standardization of materials used, and the operation of the gas chromatograph are highlighted. Many aspects of the problem areas involved in extraction and isolation techniques for pesticides in various types of samples are discussed. Techniques for confirming the presence or absence of pesticides in sample materials are treated. Gas chromatograph servicing and troubleshooting is covered. The value and need for systematic training programs for pesticide chemists is discussed. GRA

MASS SPECTROMETRIC STUDIES OF MHD SLAG THERMOCHEMISTRY Interim Report
J. W. Hastie and E. R. Plante Jun. 1981 36 p refs
(PB81-221434; NBSIR-81-2293) Avail: NTIS HC A03/MF A01 CSCL 07D

The following potassium-containing systems were studied: binary mixtures of K2O with SiO2, Al2O3, Fe2O3, and ZrO2; a series of more complex synthetic slags containing K2O, SiO2, CaO, MgO, Al2O3, and Fe2O3; and MHD channel slag (Illinois No. 6 coal); and several slag-NaCl mixtures. Data were obtained over a sufficiently wide range of component-type, composition and temperature to reveal systematic trends in slag activities from which empirical predictions are possible. However, anomalous behavior was also noted, mainly in the form of nonequilibrium effects. Application of the vaporization and activity data to plasma-slag interaction and to the recovery of potassium seed from slag is also considered. GRA

RESPONSE OF PORTABLE VOC ANALYZERS TO CHEMICAL MIXTURES Final Report, Dec. 1980 - May 1981
D. A. DuBose, G. E. Brown, and G. E. Harris Jun. 1981 61 p refs
(Contract EPA-68-02-3171-28)
(PB81-234262; EPA-600/2-81-110) Avail: NTIS HC A04/MF A01 CSCL 14B

The responses of two types of portable volatile organic compounds analyzers, calibrated with methane and used to measure a variety of chemical vapor mixtures, instrument response data for both binary and ternary mixtures of selected chemicals are presented. Various empirical models were evaluated to determine an appropriate method of estimating mixture concentration based, on instrument response. The evaluation concludes that the instrument response for a mixture falls between the response expected for the pure compounds in the mixture. Thus, an interpolation or weighted average model is used to predict the response for mixtures based on known responses for individual chemicals. Both linear and logarithmic weighted average models are applied to the data and present with estimates of accuracy. In general, these models predict the instrument response to within 30% of the observed value. GRA

DETECTION OF OIL IN WATER BY A FLAME EMISSION TECHNIQUE Final Report
Manfred Prager and Dennis Stainken Jul. 1981 52 p refs
(Contract EPA-68-02-0205)
(PB81-226185; EPA-600/14) Avail: NTIS HC A04/MF A01 CSCL 14B

A flame emission technique and basic instrument design is presented for measuring low concentrations of oil in oil-contaminated water. The flame emission instrument developed would be used as a detector for petroleum oils. The flame emission technique utilizes the selectivity of the hydrocarbon emission signal (at 431 nm) and oil detection is a function of the total

hydrocarbon concentration. Interference of metal ions is avoided by employing steam distillation and condensation techniques to vaporize oil from sample solutions. The prototype instrument successfully detected oil concentrations down to 10 ppm for oils with vapor pressure equal to or higher than No. 4 fuel oils.

(NASA-TM-76620) Avail: NTIS HC A02/MF A01 CSCL 11F

The changes in electronic structure related to transport processes occurring during the alloying of he alloy Ni_3Mn with iron and cobalt, and the ordering of the ternary alloys thus formed are presented. The Hall effect, the absolute thermal emf, the internal saturation induction, the Nernst-Ettingshausen constant, and the electrical resistivity were measured. Results show a decrease in the contribution of hole sections of the Fermi surface to the transport process occurs together with a considerable increase in the contribution of electron sections. In this case, the mobility of 3 dimensional holes decreases and the mobility of 4s electrons increases considerably. S.L.

FLAW GROWTH OF 7075, 7475, 7050 AND 7049 ALUMINUM ALLOY PLATE IN STRESS CORROSION ENVIRONMENTS: 4-YEAR MARINE ATMOSPHERE RESULTS Interim Report

K. R. Hasse and R. C. Dorward 13 Oct. 1981 63 p refs
(Contract NAS8-30890)
(NASA-CR-161887; CFT-RR-81-15) Avail: NTIS HC A04/MF A01 CSCL 11F

After nearly 53 months of exposure to marine atmosphere, crack growth in SL DCB specimens from 7075, 7475, 7050, and 7049-T7X plate has slowed to the arbitrary 10 to the -10 power m/sec used to define threshold stress intensity. Because some specimens appear to be approaching crack arrest, the importance of self-loading from corrosion product wedging as a significant driving force for crack propagation in overaged materials is questioned. Crack length-time data were analyzed using a computer curve fitting program which minimized the effects of normal data scatter, and provided a clearer picture of material performance. Precracked specimen data are supported by the results of smooth specimen tests. Transgranular stress corrosion cracking was observed in TL DCB specimens from all four alloys. This process is extremely slow and is characterized by a striated surface morphology. A.R.H.

UNIVERSAL BINDING ENERGY RELATIONS IN METALLIC ADHESION

J. Ferrante, J. R. Smith (General Motors Research Lab.), and J. H. Rose (Ames Lab.) 1981 16 p refs Presented at the Conf. on Aspects Microscopiques de l'Adhesion et de la Lubrication, Paris, 14-18 Sep. 1981
(NASA-TM-82706; E-993) Avail: NTIS HC A02/MF A01 CSCL 11F

Scaling relations which map metallic adhesive binding energy onto a single universal binding energy curve are discussed in relation to adhesion, friction, and wear in metals. The scaling involved normalizing the energy to the maximum binding energy and normalizing distances by a suitable comination of Thomas-Fermi screening lengths. The universal curve was found to be accurately represented by $E^*(A^*) = -(1+\mathrm{beta}\ A)\ \exp\ (-\mathrm{Beta}\ A^*)$ where E^* is the normalized binding energy, A^* is the normalized separation, and beta is the normalized decay constant. The calculated cohesive energies of potassium, barium, copper, molybdenum, and samarium were also found to scale by similar relations, suggesting that the universal relation may be more general than for the simple free electron metals. R.J.F.

FAILURE ANALYSIS OF A TOOL STEEL TORQUE SHAFT

John R. Reagan 1981 12 p Presented at the Conf. on Deformation, Fracture, Wear and Nondestructive Evaluation of Mater., New Orleans, 23-24 Nov. 1981; sponsored by Am. Phys. Soc. and Nat. Bureau of Standards
(NASA-TM-82758; E-1077; DOE/NASA/1011-35) Avail: NTIS HC A02/MF A01 CSCL 11F

A low design load drive shaft used to deliver power from an experimental exhaust heat recovery system to the crankshaft of an experimental diesel truck engine failed during highway testing. An independent testing laboratory analyzed the failure by routine metallography and attributed the failure to fatigue induced by a banded microstructure. Visual examination by NASA of the failed shaft plus the knowledge of the torsional load that it carried pointed to a 100 percent ductile failure with no evidence of fatigue. Scanning electron microscopy confirmed this. Torsional test specimens were produced from pieces of the failed shaft and torsional overload testing produced identical failures to that which had occurred in the truck engine. This pointed to a failure caused by a high overload and although the microstructure was defective it was not the cause of the failure. A.R.H.

LIQUID AND SOLID METAL EMBRITTLEMENT

Norman S. Stoloff 5 Sep. 1981 32 p refs
(Contract N00014-79-C-0583)
(AD-A103048; TR-3) Avail: NTIS HC A03/MF A01 CSCL 11/6

The recent literature on embrittlement induced by solid or liquid metal environments is critically reviewed. Evidence in support of an enhanced shear model of embrittlement is provided for amorphous metals, while decohesion is shown to be a viable concept for crystalline metals. The usefulness of the concept of specificity of embrittlement is questioned on the basis of evidence for new embrittlement couples as the range of experimental conditions is varied. In particular, strain rate and temperture are shown to have extremely important effects on the degree of embrittlement. Author (GRA)

FATIGUE CHARACTERISTICS AND MICROSTRUCTURAL ANALYSIS OF THERMOMECHANICALLY-PROCESSED, HIGH-MAGNESIUM ALUMINUM-MAGNESIUM ALLOY M.S. Thesis

Charles A. Cadwell, Jr. Jun. 1981 70 p refs
(AD-A104589) Avail: NTIS HC A04/MF A01 CSCL 20/11

Particular emphasis was placed on study of the microstructural changes which occur during cyclic loading. The study was conducted utilizing a simple binary alloy, Al-10.2 wt pct Mg, and a ternary Al-8.14 wt pct Mg-0.40 wt pct Cu alloy. Both alloys were given similar processing; in particular, both alloys were examined for two rates of quenching to determine the effect of cooling rate from the homogenization temperature on the tensile properties and fatigue characteristics of the alloys. The primary strengthening mechanism in the high-magnesium aluminum-magnesium alloys was determined to be the dislocation substructure developed during warm rolling. In fatigue, the Al-10.2 wt pct Mg alloy appears to exhibit an endurance limit, with a fatigue strength to yield strength ratio in excess of 0.6 in the oil quenched condition. Microstructural refinement achieved through more rapid quenching or through alloying additions was found to degrade the fatigue response although providing improved strength and ductility. EFFECT OF MECHANICAL CLEANING ON SEAWATER CORROSION OF CANDIDATE OTEC HEAT EXCHANGER MATERIALS. PART 2: TESTS WITH AMERTAP SPONGE RUBBER BALLS

D. G. Tipton Jun. 1981 32 p refs
(Contract W-31-109-eng-38)
(DE81-029953; ANL/OTEC-BCM-018-Pt-2) Avail: NTIS HC A03/MF A01

Corrosion evaluations were conducted on 3003 Alclad, C70600 copper-nickel, and commercially-pure titanium in natural seawater under simulated OTEC heat exchanger conditions to investigate the erosion-corrosion effects of mechanical tube cleaning under aggressive over-cleaning conditions. Test conditions for 3003 Alclad included Amertap soft sponge ball cleaning with and without chlorination, Amertap abrasive sponge ball cleaning with and without chlorination, and no mechanical cleaning as a control. C70600 was exposed to Amertap soft sponge ball cleaning with and without chlorination and with no mechanical cleaning as a control. Titanium was cleaned by abrasive Amertap sponge balls with and without chlorination and compared to no mechanical cleaning as a control. Test exposures of 8, 16, 30, 60, 90 and 180 days were made. The sequence of Amertap sponge ball cleaning utilized in the present tests significantly accelerated corrosion of 3003 Alclad. Chlorination brought about a further acceleration of erosion-corrosion of Alclad. Amertap soft sponge ball cleaning of C70600 caused significant acceleration of corrosion under these over-cleaning conditions. Chlorination somewhat decreased erosion corrosion of C70600. Titanium showed no substantial effect of Amertap abrasive sponge ball cleaning on corrosion, although measurable weight losses were incurred. Chlorination had no measurable effect on erosion-corrosion of titanium. DOE

IRRADIATION-INDUCED SWELLING IN COMMERCIAL ALLOYS

J. F. Bates and R. W. Powell Oct. 1980 38 p refs
(Contract DE-AC14-76FF-02170)
(DE81-029755;* HEDL-SA-2257-FP) Avail: NTIS HC A03/MF A01

Examination of a wide range of commercial alloys indicates that a minimum in swelling occurs at 40 to 50% nickel. Swelling in these alloys was measured after irradiation to peak fluences of 14.7 x 10(22) n/cm(22) (E > 0.1 MeV) at temperatures ranging from 400 C to 6500 C. The minimum in swelling extends over the full range of irradiation test temperatures. Swelling in the alloys appears to be more sensitive to preirradiation aging treatments than to relative position on the Fe-Cr-Ni ternary diagram. Preirradiation aging of an alloy removes swelling inhibitors from the matrix with a consequent increase in swelling. One of the more important swelling inhibitors removed is carbon. Carbon in solution in the configuration of atomic complexes, which may contain both lattice defects and carbon atoms, can reduce swelling by screening of the dislocation stress fields and hence cause a reduction in the dislocation-interstitial bias factor.

A reduction in swelling with increasing equivalent chromium content was also observed. DOE

N82-11192# California Univ., Berkeley. Lawrence Berkeley Lab. Materials and Molecular Research Div.
MICROSTRUCTURE AND PROPERTIES OF DUAL-PHASE STEELS CONTAINING FINE PRECIPITATES
J. S. Gau, J. Y. Koo, A. Nakagawa, and G. Thomas Jul. 1981 19 p refs Sponsored in part by Exxon Research and Engineering Company, Linden, N.J.
(Contract W-7405-eng-48)
(DE81-029946; LBL-12177) Avail: NTIS HC A02/MF A01

Very fine particles (carbides or carbonitrides) of the order of 20 A were extensively examined in the ferrite regions of dual-phase steels subjected to intercritical annealing followed by fast quenching to room temperature. These particles are probably formed during quenching after intercritical annealing. The driving force for the precipitation reaction may arise from the supersaturation of carbon (or nitrogen) in the ferrite phase. These precipitates in certain alloy compositions cause a deviation from the generally observed two phase mixture rule in that the strength of the dual-phase steels having a higher volume fraction of martensite is lower than that having a lower volume fraction of martensite. Thus, the influence of such precipitates must be considered in the structure-property relations of dual-phase steels when fast quenching is employed after intercritical annealing. DOE

DEPOSITION AND CORROSION PHENOMENA ON ALUMINUM SURFACES UNDER DELUGED DRY COOLING-TOWER CONDITIONS Interim Report
K. P. Wheeler, R. P. May, J. G. Douglas, and J. H. Tylczak Jul. 1981 88 p refs Sponsored in part by Electric Power Research Inst.
(Contract DE-AC06-76RL-01830; EPRI Proj. 422-3)
(DE81-025483; EPRI-CS-1926) Avail: NTIS HC A05/MF A01

Laboratory simulation shows that heat exchanger deposition buildup is linearly dependent on concentration factor and number of wet/dry cycles in the advanced concepts test (ACT) demonstration cooling tower. Deionized water rising after deluge reduced rate of deposition is examined. Technology transferable to ACT shows that deposition from supersaturated solution can be effectively controlled by attention to water chemistry, pH, water conditioning, and good heat transfer design. The additional mechanism of deposition by water film evaporation is effectively managed by soft water rising and uniform surface wetting. Exposure of a model TRANE surface (the ACT wet/dry exchanger) produced short-term deposition extrapolating to 0.011 mm buildup in three years. Studies continue to verify 4X as maximum cycles of concentration through control of water chemistry and rinsing after deluge. Deluge water used at ACT facility is sufficiently aggressive to warrant use of Alclad to extend tube service life. DOE

SPECIATION OF LABILE AND QUASI-LABILE METAL COMPLEX SYSTEMS USING THE KALMAN FILTER
Teri F. Brown, Donna M. Caster, and Steven D. Brown May 1981 8 p refs Presented at DOE/NBS Workshop on Environ. Speciation and Monitoring Needs, Gaithersburg, Md., 18 May 1981
(Contract W-7405-eng-48)
(DE81-025678; LBL-12625) Avail: NTIS HC A02/MF A01

Electrochemical techniques used to measure metal complex species have the advantage of sensitivity and specificity, but suffer a number of limitations. For voltammetric techniques, these include requirements of excess ligand and rapid kinetics. An approach to voltammetric studies of metal complexes is introduced which uses the Kalman filter, a recursive, linear, digital filter, to model overlapped electrochemical peaks arising from parallel reduction paths, including the situation where two or more complexes undergo slow exchange. Stability constants are calculated from the individual electrochemical responses extracted by the filter. This approach was applied to studies of the complexation of NTA with various trace metals. The model is described and results for the systems are discussed. DOE

ADSORPTION OF HYDROGEN ON IRON AND THE HYDROGEN EMBRITTLEMENT OF STEEL
K. Sieradzki and P. J. Ficalora (ORNL) 1981 13 p refs Presented at Intern. Conf. on Environ. Degradation of Engr. Mater., Blacksburg, Va., 21 Sep. 1981
(Contract DE-AC02-76CH-00016)
(DE81-025164; BNL-29672; CONF-810913-4) Avail: NTIS HC A02/MF A01

A model for the chemisorption of hydrogen on iron was developed and the calculated energies of the adsorbed states agree well with observed experimental values. The model is used to explain some of the experimental observations associated with the hydrogen embrittlement of steels. For example, the observed temperature dependence of crack growth rates can be readily interpreted within the framework of the model. The indications are that adsorption may be the key step in the embrittlement process. DOE

HYDROGEN DAMAGE IN STAINLESS STEEL
G. R. Caskey, Jr. 1981 32 p refs Presented at Second Intern. Conf. on Environ. Degradation of Engr. Mater., Blacksburg, Va., 21-23 Sep. 1981
(Contract DE-AC09-76SR-00001)
(DP-MS-81-31; CONF-810913-1) Avail: NTIS HC A03/MF A01

Both internal and external hydrogen damage were evaluated by ductility or J-integral under rising tensile loads and by fractography. Analysis of the data emphasized the potential effects of strain-induced martensite on hydrogen damage. Strain-induced martensite was neither necessary nor sufficient for hydrogen damage in the alloys studied. Neither ductility loss nor fracture-mode change correlated generally with martensite formation. Alloy composition, particularly nickel and nitrogen contents, was the primary factor in resistance to hydrogen damage. Thermomechanical processing, however, could alter the degree of hydrogen damage in an alloy and was critical for optimizing resistance to hydrogen damage. DOE

CONTRIBUTION TO THE CHARACTERIZATION OF THE ANELASTIC PROPERTIES OF MULTI-PHASE SYSTEMS
F. M. Mazzolai (Ist. di Acustica O. M. Corbino, Rome) 1981 12 p refs Presented at the Intern. Conf. on Internal Friction and Acoustic Attenuation of Solids, Lausanne, Switzerland, Jun. 1981
(Contract DE-AC02-76ER-01198)
(DE81-025581; DOE/ER-01198/1356; CONF-8106105-2) Avail: NTIS HC A02/MF A01

The various kinds of acoustical effects associated with phase transformations were characterized. It is shown that useful distinction can be made between intrinsic and extrinsic effects and that phase transformations involving compositional changes usually involve extrinsic effects. Results described in conference papers are summarized as follows: (1) the structural mechanism of internal friction in Al-Ag (Ic) and Al-Zn (11c) was further clarified; (2) new effects were phenomenologically characterized even if not completely understood; (3) information of physical interest was found on atomic mobilities in alpha-CuZnNi, and on recrystallization of Al-Mg alloys; (4) technologically important results were obtained on temper-embrittlement of alloying steels, on lattice disruption and precipitation characteristics of hydrides in Nb and V precipitation, on high properties of Al-Zn and of grey cast iron, as well as on the phase separations in (Al2O3)n MgO. DOE

ACTIVITY AND DIFFUSION OF METALS IN BINARY ALUMINUM ALLOYS M.S. Thesis
Chiang Seng Jao Dec. 1980 77 p refs
(Contract DE-AS02-77ER-04445)
(DE81-025535; DOE/ER-04445/T2) Avail: NTIS HC A05/MF A01

To determine the activity of zinc in Zn-Al alloys, the electromotive force (emf) of the cell: Zn/ZnCl2-KCl(eut)/Zn,Al was measured at temperatures between 569.5 K (296.5C) and 649.5 K(376.5C). The applicability of a two-suffix Margules equation was demonstrated, in good agreement with theoretical expectations. The diffusion coefficient of Zn in Al determined from a planar diffusion model for the experimental data was about 3 x 10 to the -10 power sqcm/sec to 2 x 10 to the -9 power sq cm/sec in the range of temperature studied. This is higher than that found in the literature. The most plausible reason appears to be the high alumina concentration in the working electrode because of partial oxidation. Oxidation of the alloying metals was the primary cause of poor alloying between calcium/or zinc and aluminum, thereby frustrating similar measurements at a Ca-Al/or Zn-Al alloy. The literature on the activity of calcium and zinc with aluminum is reviewed. DOE

TRAPPING AND SURFACE PERMEATION OF DEUTERIUM IN Fe, Ni AND STAINLESS STEEL: AN ION-BEAM STUDY
S. M. Myers 1981 20 p refs Presented at the Intern. Conf. on Environmental Degradation of Eng. Mater., Blacksburg, Va., 21 Sep. 1981
(Contract DE-AC04-76DP-00789)
(DE81-023303; SAND-81-1335C; CONF-810913-2) Avail: NTIS HC A02/MF A01

In He-implanted Fe containing approximately 1 nm He bubbles, D was trapped with an enthalpy of 0.75 + - 0.07 eV, referenced to a solution site. The proposed trapping mechanism is chemisorption on the walls of the bubbles. Deuterium was also bound to implantation defects, hypothesized to be vacancies and vacancy clusters, with enthalpies of 0.5 and 0.7 eV respectively. The permeability of the electropolished and air-exposed Fe surface was characterized by a recombination coefficient of K/sub L/ = to the -14 + - 0.7th power mm to the 4th power/s at a temperature of 500 K. Trapping of D was also observed in Ni and 304 stainless steel implanted with He, the measured binding enthalpy being about 0.5 eV in both cases. Bubble traps similar to those observed in Fe are presumed responsible. No surface-barrier effect was detected for Ni. In contrast, for electropolished and air exposed stainless steel, K/sub L/ < or = 10 to the -19th power mm to the 4th power/s at approximately 500 K. DOE

CRACK ARREST PROPERTIES OF A 9 PERCENT NICKEL CRYOGENIC STEELS Final Report, Jul. 1980 - Feb. 1981
R. D. Stout and A. W. Pense 1 May 1981 88 p refs
(Contract GRI-5080-352-0322)
(PB81-227993; GRI-80/0037) Avail: NTIS HC A05/MF A01 CSCL 11F

A review and analysis of the literature on the fracture toughness of 9% nickel steels with emphasis on the crack arrest properties of these steels applicable to LNG storage vessels is presented. The concept of crack arrest is examined and the merits of the various tests that have been developed to measure crack arrest capability are discussed. The gaps in present knowledge are pointed out and four research programs are suggested to remedy these gaps: (1) the significance of the weld heat-affected zone to crack arrest, (2) correlation of crack initiation and crack arrest tests, (3) characterization of the fracture toughness of modern 9% nickel steels, and (4) the effect of fabrication defects on crack initiaton in 9% nickel steel. A bibliography is included. GRA

EFFECTS OF IONIZING RADIATION ON THE CHEMICAL STRUCTURE, CRYSTALLINE CONTENT AND MOLECULAR WEIGHT DISTRIBUTION OF VARIOUS TEFLON RESINS Ph.D. Thesis
William Keith Fisher 1981 155 p
Avail: Univ. Microfilms Order No. 8121144

Changes in the chemical composition, crystalline content and structure, flow properties and molecular weight distribution in polytetrafluoroethylene (PTFE) after exposure to ionizing radiation are described. The radiation used was 0.8 MeV electrons. The effects of post irradiation annealing on the chemical composition and crystalline content are also analyzed. Radiation induced changes in the chemical composition and the role of oxygen and water vapor in these changes were determined by infrared spectroscopy of PTFE irradiated in ambient air, wet and dry oxygen atmosphere and under vacuum. It was found that when the irradiations are carried out in the presence of oxygen, acid fluoride endgroups are formed and that upon exposure to water vapor, these endgroups undergo hydrolysis to form carboxylic acid endgroups. Infrared absorption bands at 1730 and 1715 cm, which appear most strongly when PTFE is irradiated in a vacuum, were attributed to branch and crosslink formation. Dissert. Abstr.

EPITAXIAL MORPHOLOGIES AND DEPOSITION ENERGETICS OF POLYOXYMETHYLENE Ph.D. Thesis
Charles Maurice Balik 1981 109 p
Avail: Univ. Microfilms Order No. 8118613

Epitaxial crystallization of polyoxymethylene (POM; Delrin D-900) from iodobenzene solution was carried out between 150 C and 165 C on 11 different inorganic substrates. The most interesting results were found on mica, which yielded two different epitaxial morphologies. In one structure, the polymer forms epitaxial rodlike lamellae which exhibit preferential orientation in three directions spaced 60 deg apart. These lamellae are nearly identical with the epitaxial crystals grown on (001) alkali halide substrate surfces, where the chain axis is known to be parallel to the surface and perpendicular to the long axis of the lamellae. The same molecular geometry is assumed to exist for the rodlike epitaxy on mica. Large differences in the nucleation density of rodlike epitaxial crystals, observed over the various substrates are explained in terms of varying degrees of solvent substrate interaction. Results suggest that preferential solvent absorption may account for low polymer nucleation densities on higher surface energy substrates. Dissert. Abstr.

THE EFFECT OF SURFACE TREATMENT OF CARBON FIBRES ON THE STRENGTH PROPERTIES OF CARBON-REINFORCED PLASTICS

G. M. Gunyaev et al Sep. 1980 9 p refs Transl. into ENGLISH from Mekh. Kompozitnykh Materialov (USSR), no. 4, 1979 p 603-606
(RAE-Lib-Trans-2052; BR77976) Copyright. Avail: Issuing Activity

The effect of silicon carbide coating on the shear, bending, stretching, and compression strengths of carbon fibers and epoxy resin 5-211B carbon composites is evaluated. The distribution of the silicon carbide coating over the surface was studies by electron microscopy techniques. It was observed that the surface structure of the original carbon fiber determined the morphology and the strength properties of the material. The inner surface of the SiC film reproduced the characters of the carbon fiber surface while a dense coating was formed along the perimeter of the fiber. There was no change in the dynamic modulus of elasticity of the coated fiber but the strength was dependent on the film thickness. The twisting and the shear characteristics of the carbon fiber increased uniformly with the increase in the thickness of a well bonded film. There was no effect of the SiC coating on the compression strength 5-211B carbon fiber composite for a film of 10 to 30 nm but optimum shear strengths were obtained for a film thickness of 10 to 15 nm. THE STABILITY OF NEW TRANSPARENT POLYMERIC MATERIALS: THE EPOXY TRIMETHOXYBOROXINE SYSTEM. PART 1: THE PREPARATION, CHARACTERIZATION AND CURING OF EPOXY RESINS AND THEIR COPOLYMERS Final Report

Eli Pearce and S. C. Lin [1981] 58 p refs
(Grant NsG-2182)
(NASA-CR-164951) Avail: NTIS HC A04/MF A01 CSCL 11G

The effects of resin composition, curing conditions fillers, and flame retardant additives on the flammability of diglycidyl ether of bisphenol-A (DGEBA) as measured by the oxygen index is examined. The oxygen index of DGEBA cured with various curing agents was between 0.198 to 0.238. Fillers and flame retardant additives can increase the oxygen index dependent on the material and the amount used. Changes in the basic cured resin properties can be anticipated with the addition of noncompatible additives. High flame resistant epoxy resins with good stability and mechanical properties are investigated. S.L.

FRACTURE MECHANICS OF CELLULAR GLASS

J. G. Zwissler and M. A. Adams 1 Feb. 1981 53 p refs
(Contracts NAS7-100; DE-AI01-81ET-20307)
(NASA-CR-164959; JPL-Pub-81-16) Avail: NTIS HC A04/MF A01 CSCL 11A

The fracture mechanics of cellular glasses (for the structural substrate of mirrored glass for solr concentrator reflecting panels) are discussed. Commercial and developmental cellular glasses were tested and analyzed using standard testing techniques and models developed from linear fracture mechanics. Two models describing the fracture behavior of these materials were developed. Slow crack growth behavior in cellular glass was found to be more complex than that encountered in dense glasses or ceramics. The crack velocity was found to be strongly dependent upon water vapor transport to the tip of the moving crack. The existence of a static fatigue limit was not conclusively established, however, it is speculated that slow crack growth behavior in Region 1 may be slower, by orders of magnitude, than that found in dense glasses. CASTABLE HIGH TEMPERATURE FRACTORY MATERIALS Patent Application

Isidor Zaplatynsky, inventor (to NASA) Filed 13 Oct. 1981 5 p
(NASA-Case-LEW-13080-2; US-Patent-Appl-SN-310713) Avail: NTIS HC A02/MF A01 CSCL 11B

The fabrication of chemically inert ceramic bodies that are both high refractory and porous is disclosed. A paste is formed by mixing alumina grain having a uniform particle size with colloidal silica that is stabilized with ammonia. This paste is then cast without forming a compact and dried without pressing. After drying, the cast body was sufficient green strength to be handled, and it is transferred to a furnance for curing. A green body prepared in accordance with the invention does not undergo shrinkage during either curing or prolonged subsequent heating. NASA

MECHANISM OF MONURON-ACCELERATED DICYANDIAMIDE CURE OF EPOXY RESINS Final Report
Bernard R. LaLiberte and Joseph Bornstein Jul. 1981 13 p refs
(DA Proj. 1L1-62105-AH-84)
(AD-A104658; AMMRC-TR-81-34) Avail: NTIS HC A02/MF A01 CSCL 11/9

A very interesting and practical property of trisubstituted ureas such as Monuron, is the ability of this class of aryl ureas to accelerate the dicyandiamide (Dicy) cure of epoxy resins. Earlier workers had proposed that the in situ formation of dimethylamine from Monuron was an important factor in explaining the mechanism of the Monuron-accelerated dicyandiamide cure of epoxy resins. The main source of dimethylamine did not appear to us to be that which had been previously described. We have found that the amine is generated by a cyclocondensation reaction between the aryl urea and the resin to form a 2-oxazolidone. During this study, it was found that the effectiveness with which dimethylamine activates Dicy, especially when compared to other materials such as trimethylamine, made this amine unique. It is postulated that dimethylamine has a strong proclivity to remove a proton from Dicy, thereby creating a highly active nucleophilic species. This enhancement of the nucleophilic nature of the hardening agent (DICY) would account for the increased reactivity of Dicy toward epoxy resins. Author (GRA)

MICROSTRUCTURE OF AMORPHOUS AND SEMI-CRYSTALLINE POLYMERS Final Report, Feb. 1977 - Oct. 1980
Donald R. Uhlmann 7 Jun. 1981 86 p refs
(Grant AF-AFOSR-3226-77; AF Proj. 2303)
(AD-A102853; AFOSR-81-0629TR) Avail: NTIS HC A05/MF A01 CSCL 11/9

Work which was carried out under this grant has led to the development of a technique for scanning transmission electron microscope of polymers which seems to offer outstanding promise for the characterization of their structures. When applied to amorphous thermoplastics, the structures are found to be homogeneous down to the limit of resolution to the microscope, with no evidence found for the presence of nodular features or other structures characteristic of regions of local order in the materials. This finding is in accord with the results of small angle neutron scattering studies of same materials. Based on the combined results of these studies, it is suggested that the nodular hypothesis be laid to rest and that the structure of flexible chain amorphous polymers be represented by models such as the random coil. The technique of microtoming bulk samples followed by staining with heavy metal atoms and viewing with Z contrast in the scanning transmission electron microscope has also been used with success to characterize the structures of epoxy and polyimide resins. Commercial polyimide films have been shown to be homogeneous on a scale of 50-200 Angstroms with the scale and form of the heterogeneities varying through the thickness of the film. The structure of epoxy resins presents a more complicated issue. GRA

DESIGN OF REFRACTORIES FOR RESISTANCE TO HIGH-TEMPERATURE EROSION-CORROSION Final Report
C. A. Andersson, A. Y. Ranadive, and T. Vojnovich Jul. 1981 149 p refs Sponsored in part by EPRI
(EPRI Proj. 625-2)
(DE81-904208; EPRI-AP-1955) Avail: NTIS HC A07/MF A01

A theory describing erosion of refractory walls in pneumatic flow was developed. Measurements of particle/wall collisions, wall erosion rates and particle attrition in pneumatic transport of solids were taken. A model was formulated that relates the kinetic energies of striking particles to the fracture energies of wall materials using three failure criteria. Test measurements of the erosion rates of eight refractories with various eroding particle materials, at room temperature and at high temperatures were performed. Results of the erosion tests provided the unknown coefficients in the erosion model and identified the mode of particle attrition in pneumatic flow. DOE

MICROSTRUCTURE OF EXPLOSIVELY COMPACTED ALUMINUM NITRIDE CERAMIC

W. H. Gourdin, C. J. Echer, C. F. Cline, and L. E. Tanner (California Univ., Berkeley. Lawrence Berkeley Lab.) 1 May 1981 12 p refs Presented at the 7th Intern. Conf. on High Energy Fabric., Leeds, England, 15 Sep. 1981
(Contract W-7405-eng-48)
(UCRL-85274; CONF-810910-1) Avail: NTIS HC A02/MF A01

Observations are reported of the microstructure of aluminum nitride (AlN) ceramic produced by explosive consolidation of the powder. Similarities between the grain structure of the compact and the starting powders are striking. Grain growth does not occur during densification and the 0.1 mu particle size of the powder is retained, although considerable deformation is introduced into individual grains. Of particular interest is an intergranular phase which appears throughout the compact. Observations in the transmission electron microscope indicate that this phase is amorphous. The influence of this glassy intergranular phase on bonding is discussed. DOE

TRAP ACTIVATION MODEL FOR HYDROGEN RETENTION AND ISOTOPE EXCHANGE IN SOME REFRACTORY MATERIALS

D. K. Brice and B. L. Doyle 1981 5 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract DE-AC04-76DP-00789)
(DE81-025995; SAND-81-0295C; CONF-810831-2) Avail: NTIS HC A02/MF A01

Our recently developed Local Mixing Model (LMM) has been successful in describing and predicting the properties of hydrogen retention and isotope exchange for a variety of refractory materials. For some materials, however, the detailed predictions of the LMM are not observed. A Trap Activation Model (TAM) is proposed here to account for the observed departures from the LMM. DOE

INNOVATIVE TECHNOLOGY FOR FABRICATION OF CERAMICS: EDS RAPID SOLIDIFICATION PROCESS APPLICATION TO SPECIALIZED MATERIALS Final Report, 30 Jun. 1975 - 30 Sep. 1980

Della M. Roy, Rustum Roy, and T. P. Holleran 15 Nov. 1980 53 p refs
(Grant DI-BM-GO-155191)
(PB81-214868; BM-OFR-66-81) Avail: NTIS HC A04/MF A01 CSCL 11B

A rapid solidification technology method to produce fine ceramic powders of many compositions with unique properties is examined. The process uses salt solutions and includes two steps, the first to evaporate the liquid and the second to very rapidly decompose the salt to a very fine powder. The process was demonstrated in terms of the following material applications: aluminates, ferrites, phosphors, ionic conductors, and cements. This technique of producing ceramic powders offers a number of potential advantages over existing methods such as ability to produce complex compositions, lower energy requirements, and improved properties. The recovery of hydrogen from such metal hydrides as LiH, MgH2, TiH2, CaH2 and FeTiH compounds is studied, with the aim of evaluating the viability of the technique for the storage of hydrogen fuel. The pressure-temperature dependence of the reactions, enthalpies of formation, the kinetics of the hydrogen absorption and desorption, and the mechanical and chemical stability of the metal hydrides are taken into account in the evaluation. Economic aspects are considered. Development of portable metal hydride hydrogen storage reservoirs is also mentioned. Author

EXPERIMENTAL STUDY OF FUEL HEATING AT LOW TEMPERATURES IN A WING TANK MODEL, VOLUME 1 Final Report

Francis J. Stockemer Aug. 1981 75 p refs
(Contract NAS3-21977)
(NASA-CR-165391; LR-29935-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 21D

Scale model fuel heating systems for use with aviation hydrocarbon fuel at low temperatures were investigated. The effectiveness of the heating systems in providing flowability and pumpability at extreme low temperature when some freezing of the fuel would otherwise occur is evaluated. The test tank simulated a section of an outer wing tank, and was chilled on the upper and lower surfaces. Turbine engine lubricating oil was heated, and recirculating fuel transferred the heat. Fuels included: a commercial Jet A; an intermediate freeze point distillate; a higher freeze point distillate blended according to Experimental Referee Broadened Specification guidelines; and a higher freeze point paraffinic distillate used in a preceding investigation. Each fuel was chilled to selected temperature to evaluate unpumpable solid formation (holdup). Tests simulating extreme cold weather flight, without heating, provided baseline fuel holdup data. Heating and recirculating fuel increased bulk temperature significantly; it had a relativley small effect on temperature near the bottom of the tank. Methods which increased penetration of heated fuel into the lower boundary layer improved the capability for reducing holdup. S.L.

THE EFFECTS OF GASEOUS ATMOSPHERES ON THE PERFORMANCE CHARACTERISTICS OF ALUMINUM-SODIUM NITRATE FLARES
Patricia L. Farnell, Francis R. Taylor, and Anthony J. Beardell Aug. 1981 31 p refs
(AD-A104383; AD-E400687; ARLCD-TR-81026) Avail: NTIS HC A03/MF A01 CSCL 19/1

The burning rates and the light outputs produced by burning binary mixtures of aluminum and sodium nitrate have been studied as a function of composition and of atmospheric content. Also studied were the effects of loading pressure upon the combustion process. The gaseous atmospheres investigated were mixtures of oxygen and nitrogen, argon, or helium. For all systems except those in which the composition was pressed at high loading pressure, the burning rate was unaffected as oxygen concentration was changed, indicating that heat and radiation feedback from the flame have only a minor influence on the burning rate. Consequently, it is hypothesized that the burning rate is essentially controlled by the exothermic processes occurring at or very near to the burning surface. For all systems, the burning composition produced low light output when oxygen was excluded from the atmosphere. With increasing oxygen content, the light output increased by a large factor. This indicates that at low oxygen concentrations much of the metal escaped from the flame unburned. For compositions with low metal content, propagation is very difficult. It is believed that the decomposition of excess sodium nitrate removes heat from the burning surface. This heat loss reduces the rate of vaporization of the metal, causing this vaporization to become the rate controlling step. At the point at which the vaporization rate becomes considerably lower than the rate of oxidation of the metal, the flame will be quenched due to lack of fuel.

JET FUEL LOCKS TO SHALE OIL: THE 1980 TECHNOLOGY REVIEW
Herbert R. Lander May 1981 156 p refs Proceedings of Conf. held at Cincinnatti, 19-20 Nov. 1980
(AF Proj. 2480)
(AD-A104414; AFWAL-TR-81-2063) Avail: NTIS HC A08/MF A01 CSCL 11/4

The progress of several Air Force shale oil related programs is reported. Three shale oil processing studies evaluating the yield, cost, and quality of JP-4 and JP-8 turbine fuel produced from whole crude shale oil are discussed. Details of a fourth program that produced 11,300 gallons of specification JP-4 from Geokinetics shale oil are reported. Some of this jet fuel was tested in Air Force Fuel Mainburner/Turbine Effects Programs and was shown to behave very similar to petroleum derived JP-4. An additional study concentrated on developing hydrotreating catalysts that would more efficiently convert shale oil into aviation turbine fuel.

OPTOACOUSTIC SPECTROSCOPY TO DETECT HYDRAZINE FUELS Final Report, 1 May 1979 - 1 Feb. 1980
Edward S. Kolesar, Jr. Jul. 1981 74 p refs
(AF Proj. 7930)
(AD-A104675; SAM-TR-81-15) Avail: NTIS HC A04/MF A01 CSCL 14/2

This analysis has presented the basic theory of optoacoustic spectroscopy oriented toward designing a specific system to measure the hydrazine fuels. The fundamental goal in designing this system has been to measure absorption with the greatest possible sensitivity and, thus, maximize the signal-to-noise ratio. In this analysis, all vital components have been selected from commercially available sources and integrated into a system design. A word of caution is due, however, because only the fundamental sources of noise have been considered. In any real system, additional noise sources may further degrade performance. Some commonly encountered problems are extraneous acoustic noise, vibration-induced noise, and unwanted signals generated by absorption of laser beam energy, by sample cell walls and windows. To fine-tune a specific system, each of these practical problems would have to be resolved. For such purposes, experimentation has yielded the best results in the past, and would be expected to do so in the future.

AN ASSESSMENT OF THE USE OF ANTIMISTING FUEL IN TURBOFAN ENGINES Final Report, Sep. 1979 - Nov. 1980
A. Fiorentino, R. DeSaro, and T. Franz Jun. 1981 53 p refs
(Contract NAS3-22045)
(NASA-CR-165258; AD-A104673; PWA-5697-29; FAA-CT-81-58) Avail: NTIS HC A04/MF A01 CSCL 21/4

An evaluation was made on the effects of using antimisting kerosene (AMK) on the performane of the components from the fuel system and the combustor of a current in-service JT8D aircraft engine. The objectives were to identify problems associated with using antimisting kerosene and to determine the extent of shearing or degradation required to allow the engine components to achieve satisfactory operation. The program consisted of a literature survey and a test program which evaluated the antimisting kerosene fuel in laboratory and bench component testing, and assessed the performance of the combustor in a high pressure facility and in an atitude relight/cold ignition facility. Performance of the fuel pump and control system was evaluated in an open loop simulation. Thus far, results of the program would not preclude the use of antimisting kerosene in a jet engine application.

OUTGASSING OF TWO SYNTHETIC FUELS Final Report
Peter Demas Sep. 1981 25 p refs
(ZF43451001)
(AD-A104580; DTNSRDC/SME-80/46) Avail: NTIS HC A02/MF A01 CSCL 21/4

The outgassing characteristics of two synthetic fuels proposed for Navy use were investigated to determine whether potentially toxic gases could be released into ships' atmospheres. The synthetic fuels studied were: (1) shale diesel fuel W-375 prepared to conform to MIL-F-16884G and (2) shale jet fuel W-383 prepared to conform to MIL-T-5624K. These outgassing characteristics of the synthetic fuels were compared to the outgassing characteristics of a conventional petroleum fuel conforming to MIL-16884G obtained from USS PONCE (LPD 15). Single samples of each fuel were sequentially exposed to temperatures of 50, 150, and 250 C for 3 hours at each temperature, and the types and amounts of the outgassed products were determined. Carbon monoxide, hydrocarbons, aldehydes, nitrogen oxides, and sulfur dioxide were outgassed. Of these, only the amount of carbon monoxide produced by diesel fuel W-375 and the amount of aldehydes produced by the conventional diesel fuel were relatively significant since each exceeded the Threshold Limit Value for these constituents by a factor of about 13. Some decomposition was evidenced when fuel W-375 was heated up to 245 C. It is recommended that similar studies be

performed with more types of synthetic fuels as these develop and become available in order to establish a better comparison of outgassing between these fuels and the conventional fuels.

AN INVESTIGATION OF THE COMBUSTION PROCESS IN SOLID FUEL RAMJETS M.S. Thesis
William Vernon Goodwin Jun. 1981 58 p refs
(AD-A104603) Avail: NTIS HC A04/MF A01 CSCL 21/4

An experimental investigation was conducted into four areas of the solid fuel ramjet combustion process: (1) the effects of near-wall turbulent mixing and equivalence ratio on combustion efficiency, (2) the effects of bypass air on combustion efficiency, (3) the combustion process in a cylindrically perforated fuel grain with a twin side-dump/dome configuration, and (4) the comparison of experimental radial temperature profiles to computer generated radial profiles. Polymethylmethacrylate fuel grains were burned in a ramjet motor and a thrust stand. Combustion efficiencies were determined and compared for different configurations. It was found to be insensitive to variations in the mixture ratio and to near-wall mixing. Bypass air was found to adversely affect the combustion efficiency both in stable and unstable combustion environments. The twin side-dump/dome configuration was unable to sustain combustion for all conditions investigated. Theoretical radial temperature profiles were found to have larger near wall gradients than were measured experimentally.

ALTERNATIVE FUEL FOR THE STEEL INDUSTRY OF NORTHERN INDIANA: A PREFEASIBILITY STUDY OF A CENTRAL COAL GASIFICATION PROJECT
May 1981 275 p refs Sponsored in part by Northern Indiana Public Service Co.
(Contract DE-FG01-80RA-50146)
(DE81-029314; DOE/RA-50146/1) Avail: NTIS HC A12/MF A01

A survey of the demand for natural gas indicates a wide variation, from a low of 220 billion Btu per day to a high of 387 billion Btu per day. After an examination of the market demand, it was concluded that the synthetic fuels plant should be sized to produce 120 billion Btu per day of gas. Due to the costs of installing additional gas distribution systems and modifying fuel burning equipment, it was concluded that a medium Btu gas should be produced that would have special properties to meet the requirements of existing equipment. The Lurgi and Texaco gasification processes were chosen as the basis for the study. The most significant environmental constraint will be air quality. Although the use of either process is feasible, NIPSCO selected the Texaco case for the development of the economics. A cash flow analysis indicates that the price of medium Btu gas required to yield a 15 percent DCF return on equity is $5.67 per million Btu in 1981 dollars. This is approximately equal to the current price of imported oil. It is based on a 20 year financial analysis using a 3:1 debt to equity ratio and assumes an annual escalation in cost and gas price of 10 percent. DOE

CATTAIL RHIZOME-DERIVED ALCOHOL Interim Report
J. E. Gabrielson 30 May 1981 22 p refs
(Contract DE-FG02-81AF-92016)
(DE81-028307; DOE/AF-92016/T1) Avail: NTIS HC A02/MF A01

Over 600 pounds of chizomes, weighted wet and dirty were harvested and air dried. Average yields, on low land, were 1.9 tons/acre. Yields from areas in ponds may have been higher but it is difficult to estimate the areas. Sixteen fermentations were made. The results show that the chizomes do not ferment well unless they are finely ground, and saccharified with acid, malt, or enzymes. Grinding and screening so the feed passes a 40 mash screen and then saccharifying with two enzymes produced the best results. Over 50% of the solids were converted to alcohol and carbon dioxide, 25% yield of alcohol based on dry weight of solids. Based on the maximum land harvest rate and the best alcohol yield production of 285 gallons of alcohol/acre of cattails are projected.

DEVELOPMENT OF A SMALL-SCALE COMMERCIAL ALCOHOL DEHYDRATION 190 TO 200 PROOF Final Report
1981 5 p refs
(Contract DE-FG02-81AF-92005)
(DE81-030158; DOE/AF-92005/T1) Avail: NTIS HC A02/MF A01

A small scale farm sized commercial unit to produce anhydrous 200 proof ethanol from 190 proof source of locally produced grain alcohol (ETOH) was investigated. The approach is to investigate a low pressure process to efficiently separate water from 190 proof alcohol, with and without the use of a third component to break the azeotrope of water and alcohol formed during atmospheric conditions. Results from this experiment show that a vacuum shell is not sufficient in design to effect wet alcohol to the anhydrous state.

COAL HYDROGENATION VIA BONDING OF METALLIC COMPOUNDS TO COAL, PART 1. SOLUBILIZATION OF ILLINOIS BITUMINOUS COAL - THE CRITICAL IMPORTANCE OF METHYLENE GROUP CLEAVAGE, PART 2 Final Report
Milton Orchin 1981 23 p refs
(Contracts DE-AS01-76ET-10517; EF-76-01-2308-10)
(DE81-027562; DOE/ET-10517/T1) Avail: NTIS HC A02/MF A01

Data for the hydrogenation of Elkhorn coal at 390 C with the initial pressure of 13.8 MPa hydrogen and with various catalysts (stannous chloride and complexes of cobalt and tin), and solvents (decalin and tetralin) are presented in tabular form and results are discussed. Model compounds of coal, polystyrene beads were tin-bonded and tin-impregnated, then hydrogenated under various temperatures, pressures, and with either decalin or tetralin. Results show both hydrogen and the tin catalyst are necessary for liquefaction at 390 C, and under comparable conditions, bonded tin gave greater liquefaction than impregnated tin but with considerably greater hydrogen consumption. In the coal solubilization study, solubilization by hydroliquefaction and by chemical reduction with potassium in tetrahydrofuran seems to indicate that initial degradation of coal by both techniques proceeds by ether cleavage and that further degradation is achieved in both cases by methylene bridge attack. The nuclear magnetic resonance studies on hydroliquefaction products indicate that Illinois bituminous coal is structurally quiet homogeneous.

CONCEPTUAL DESIGN FOR A MULTI-USER MEDIUM BTU COAL GASIFICATION COMPLEX. VOLUME 1: EXECUTIVE SUMMARY
Sep. 1980 106 p

(Contract DE-FG01-80RA-50135)
(DE81-027139; DOE/FE-50135/2) Avail: NTIS HC A06/MF A01

On the basis of fuel requirements, a gasifier to produce immediate Btu gas (250 Btu/SCF) at a scale of 8.3 million Btu/day was designed. The basic conclusion, based upon the $6.45/MM Btu required selling price of IFG for this project, was that the facility, as designed, does not present a viable business opportunity. Still existing are the customer's need for long term, stable supplies of clean energy with high fuel utilization load factors. The failure to produce a viable business opportunity does not condemn the process or the project. Even at $6.45/MM Btu, the economic attractiveness of the project was not so poor as originally perceived. When the recent volatile energy price variations are coupled with current rates of inflation and proposed deregulation of natural gas, the long-term attractiveness of IFG is visible. The hurdle here is convincing management that the risks of accepting a higher, yet secure cost of energy now is more than off-set by future savings. Various financial incentives are considered. DOE

LABORATORY STUDY FOR REMOVAL OF ORGANIC SULFUR FROM COAL Final Report
1 Jul. 1981 210 p refs
(Contract DE-AC22-80PC-30141)
(DE81-025132; DOE/PC-30141/T4) Avail: NTIS HC A10/MF A01

A description of laboratory experimental equipment and a detailed discussion of the results is presented. Initial and concluding engineering design and cost estimations are also presented and the last two sections contain recommendations for future work and an appendix of laboratory data. The TRW Gravimelt Process involves the treatment of mine-cleaned coal with molten potassium and or sodium hydroxide to chemically extract both organic and pyritic sulfur into the molten alkali. The coal mineral content is broken down to forms insoluble in water but soluble in a second liquid, usually dilute sulfuric acid. The high density of the melt causes the desulfurized coal to float to the surface, where it is skimmed off. The coal is then washed with water to completely recover the alkali metal and the coal is dried. If the coal is next washed with a second liquid, almost all of the mineral matter is extracted into the solution. DOE

ADVANCED SYSTEM EXPERIMENTAL FACILITY: SOLID WASTE TO METHANE GAS. BACKGROUND AND PROCESS DESCRIPTION
R. Isaacson and J. Pfeiffer Mar. 1981 15 p refs
(Contract W-31-109-eng-38)
(DE81-030198; ANL/CNSV-22) Avail: NTIS HC A02/MF A01

The Refuse Conversion to Methane Facility in Pompano Beach, Florida, a 100-ton/day experimental plant to convert municipal solid waste (MSW) to methane for fuel was designed to assess the technical merit of anaerobic digestion of the MSW process. Approximately 40 ton/day of volatile solids are fed to the digesters; of this, about 25 ton/day will be converted to gases. For each pound of volatile solids destroyed, 6.6 std. cu ft of methane gas and 6.6 std. cu ft of CO2 will be produced. Thus, the plant will yield approximately 330,000 std. cu ft/day each of methane and CO2. The most important process variables are to be tested allowing judgments to be made on scale up considerations. DOE

NEAR-TERM GOALS FOR ALCOHOL FUELS FROM BIOMASS: AN OVERVIEW OF RESOURCE REQUIREMENTS, LAND USE, ENVIRONMENTAL, AND SOCIOECONOMIC IMPACTS
J. Halsey, D. Hazard, K. Kawaoka, K. Stephens, and G. DAlessio (DOE) Argonne, Ill. Argonne Natl. Lab. Dec. 1980 111 p refs

(Contract W-31-109-eng-38)
(DE81-029987; ANL/EES-TM-149) Avail: NTIS
HC A06/MF A01

The biomass resources needed to meet national alcohol production goals are examined, available technologies for utilizing agricultural products and byproducts are reviewed, and potential environmental and socioeconomic impacts of near-term alcohol production are identified. Near-term (1985 to 1986) land resource requirements and impacts are emphasized with particular attention to the major corn producing states. Results indicate that: (1) the grain availability for ethanol production does not appear to be limiting for these near-term production capacity goals; (2) major expansion of acreage planted in corn should not result from these goals; (3) environmental impacts on and from farm lands should not increase significantly; (4) food prices may increase due to the near-term goals, but farmers should benefit overall; and (5) the expansion of alcohol production in the longer term (1986 to 2000 and beyond) will necessitate the use of additional biomass feedstocks and residues. DOE

PRODUCTION AND UTILIZATION OF METHANE FROM ANAEROBIC SLUDGE DIGESTION IN U.S. WASTEWATER-TREATMENT PLANTS

Jul. 1981 109 p refs
(Contract DE-AC01-76CS-20300)
(DE81-029958; DOE/CS-20300/3) Avail: NTIS
HC A06/MF A01

Three generic onsite uses were selected for energy and cost accounting analysis: heat generation, mechanical energy generation, and electrical energy generation. Of the gas utilization methods analyzed, the most energy efficient and cost effective was found to be the direct production of mechanical energy to drive aerators and pumps. Between 50 and 80 percent of the mechanical energy required for wastewater treatment can be provided by digester gas. In addition, waste heat can be recovered from the engines to aid in heating the digesters and buildings. Total energy costs for the mechanical energy generation scheme averaged around $30/million gallons treated, compared to $34/million gallons and $45/million gallons for the electrical energy generation and heat generation schemes, respectively. DOE

SOLAR COAL-GASIFICATION REACTOR FOR HYDROCARBON-FREE SYNTHESIS GAS

W. R. Aiman Jun. 1981 10 p Presented at the STTF Users Assoc. Ann. Meeting, Pasadena, Calif., 23 Apr. 1981
(Contract W-7405-eng-48)
(DE81-026600; UCRL-86260; CONF-810469-3) Avail: NTIS
HC A02/MF A01

The products from a coal gasification process are discussed. In synthesis gas production, the end product is a high Btu gas composed of methane and higher hydrocarbons. Furthermore, the liquid hydrocarbons can be even more valuable as feedstocks for other processes. In other applications such as methanol production, the hydrocarbon content of the synthesis gas is a non-reactive diluent that must be bled away from the product synthesis area to keep its concentration from building up. In addition to the above benefits, this reactor requires substantially less steam in the coal gasification process. The reactor is able to produce hydrocarbon-free synthesis gas because it withdraws the pyrolysis gases from the reactor as they are formed and reinjects them above the char gasification zone where they are steam reformed into CO, CO2, and H2. Since almost all of the hydrocarbons released in coal gasification come off with the pyrolysis gases, the reactor will produce nearly hydrocarbon-free gas. DOE

N82-11248# California Univ., Livermore. Lawrence Livermore Lab.

CONTROLLED RETRACTING INJECTION POINT (CRIP) SYSTEM: A MODIFIED-STREAM METHOD FOR IN SITU COAL GASIFICATION

R. W. Hill and M. J. Shannon 15 Apr. 1981 10 p refs Presented at the 7th Underground Coal Conversion Symp., Fallen Leaf Lake, Calif., 8-11 Sep. 1981
(Contract W-7405-eng-48)
(DE81-026477; UCRL-85852; CONF-810923-2) Avail: NTIS
HC A02/MF A01

The principle of moving the injection point (where the combustion-supporting air or oxygen from the surface is fed into the coal seam) to new areas of unburned coal as the burn progresses in coal gasification is investigated. The controlled retracting injection joint or CRIP system is designed to keep the injection point on the bottom of the coal seam and to move it backwards away from the collapse zone into fresh, solid coal. The principle of controlled retraction allows the operator to choose the optimum time and distance to move the injection point, and consequently the burn zone, to get the best possible performance from the gasifier. Although this system will work with coal seams of any thickness, it is particularly well suited to thick coal seams where the cavity grows by coal collapse as well as combustion. Placement of the production channel at the top of the seam, above the injection well ensures isolation from the effects of collapse and reduces the risk of plugging the production well. DOE

ASSESSMENT OF OIL-SHALE TECHNOLOGY IN BRAZIL Final Technical Report, 27 Oct. 1980 - 27 Jul. 1981

27 Jul. 1981 143 p refs
(Contract DE-AC01-80ER-30010)
(DE81-027574; DOE/ER-30010/1) Avail: NTIS
HC A07/MF A01

This assessment investigates whether US oil shale developers might benefit from the experience gained by the Brazilians in the operation of their Usina Prototipo do Irati oil shale demonstration plant at Sao Mateus do Sul, and from the data generated from their oil shale research and development programs. A chapter providing background information on Brazil and the Brazilian oil shale deposits is followed by an examination of the potential recovery processes applicable to Brazilian oil shale. The evolution of the Brazilian retorting system is reviewed and compared with the mining and retorting proposed for US shales. Factors impacting on the economics of shale oil production in Brazil are reviewed and compared to economic analyses of oil shale production in the US. Chapters examining the consequences of shale development in terms of impact on the physical environment and the oil shale worker complete the report. DOE

PREIGNITION VOLATILE YIELD AS RELATED TO COAL CHARACTERISTICS Quarterly Report, Apr. - Jun. 1981

Jul. 1981 16 p ref
(Contract DE-AC22-80PC30290)
(DE81-027584; DOE/PC-30290/T3; FE-30290-3Q) Avail: NTIS HC A02/MF A01

Twelve coals are currently being characterized regarding their proximate and ultimate analysis, reflectance, surface area, and petrographic composition. Devolatilization experiments were completed at two temperature levels for nine of the twelve coals. In addition the effect of particle size on preignition volatile yield was been investigated for Illinois No. 6 coal. The relation between preignition volatile yield and such coal characteristics as: (1) carbon content; (2) hydrogen to carbon ratio; (3) volatile matter; (4) reflectance; (5) surface area; and (6) various functions of the petrographic composition was studied. From the coals tested thus far the most direct relation is between the volatile yield and carbon content. The AERL coal combustion model modified to allow exploration of the effect of preignition volatile yields on flame stability in a swirl burner. DOE

SOLVENT-REFINED COAL-1 DEMONSTRATION PROJECT. FINAL ENVIRONMENTAL IMPACT STATEMENT, VOLUME 1 OF 2 Final Report
Jul. 1981 700 p refs
(DE81-025983; DOE/EIS-0073-Vol-1) Avail: NTIS HC A99/MF A01

The potential environmental impacts associated with the construction and operation of a 6000-tpsd-capacity coal liquefaction facility at Newman, Kentucky which will demonstrate the technical operability, economic viability, and environmental acceptability of an SRC-I process are assessed. Impacts assessed include the following: effects of the project on occupational and public health resulting from the production and use of SRC products; potential impacts on terrestrial and aquatic ecology; potential and expected impacts on land use; withdrawal and alteration of prime agricultural land; projected effects on flood-plain and wetland areas; potential impacts on surface water and groundwater; potential impacts on ambient air quality; potential change of the cultural landscape; potential impacts on sites of archaeological significance; and changes to existing economic and social characteristics of the site area. Long-range and cumulative impacts of a future commercial expansion of the proposed facility at the proposed site to an approximately 30,000-tpsd capacity are also addressed. A construction and operational monitoring plan to assess the effectiveness of the planned mitigatory measures for the duration of the demonstration phase is presented. DOE

SURFACE COAL GASIFICATION
Oct. 1980 48 p refs
(DE81-030183; DOE/METC-SP-110) Avail: NTIS HC A03/MF A01

The successful commercial application of surface gasification of coal could enable the United States to use from its vast deposits of coal to produce a wide variety of energy products and chemical feedstocks. The technology base is well developed and extremely flexible for converting coal into alternate products suitable for the demands of a broad and heterogeneous market and a wide array of users/owners. To meet the defined program objectives, several pilot plant and process-development operations are being conducted. Four of these operations are described: (1) combustion engineering low-Btu entrained-bed gasifier; (2) bi-gas high-Btu entrained-bed gasifier; (3) ash-agglomerating fluid-bed gasifier; and (4) the short-residence time high-Btu hydrogasifier. Gasification technology-crosscut conclusions and results of technical problems and issues common to the four pilot plants are discussed. DOE

N82-11254# Department of Energy, Morgantown, W. Va.
ADVANCED-GASIFICATION PROCESSES
Dec. 1980 66 p refs
(DE81-030184; DOE/METC-SP-183) Avail: NTIS HC A04/MF A01

An analysis of the needs for commercial gasification reveals the following principal categories of information gaps that can be filled by programs already in progress or those readily initiated. The gaps are technology base need required for successful commercialization of both currently available and advanced-gasification processes. The needs are defined further in Table 2-1, which shows the current status of the technology data base. The need areas are classified as follows: Coal Preparation/Feeding/Fine Management, Reactor Design/Performance, Gas Cleaning/Cooling, Acid Gas Removal/Gas Shift and Conversion Data Base on State-of-the-Art and Advaced Technologies, Components/Materials/Instrument Development, Health/Environmental/Safety, and General. It is anticipated that solutions to many of the problems associated with the demonstration plants, the alternative fuel plants, and the Synthetic Fuel Corporation endeavors will not be available during the design and construction phases. However, during the operating and optimization phases of most of these projects prior to commercialization, where additional will have provided the additional data base needed to correct deficiencies and/or to advance the state of the art. DOE

TRANSPORT CHARACTERISTICS OF ALTERNATE SLURRY FUELS Quarterly Technical Progress Report, Apr. - Jun. 1981
1981 5 p Sponsored by DOE
(DE81-028580; DOE/TIC-1028580) Avail: NTIS HC A02/MF A01

Progress is reported in an effort to develop flow data for various alternate fuels, such as coal/water mixtures, in a pump loop which accurately simulates fuel feed systems found in boiler and furnace applications. Instruments and procedures were selected for the measurement and correlation of pressure loss as a function of slurry characteristics and system design. An existing loop was redesigned by lengthening both the vertical and horizontal straight sections and by simplifying the tank discharge/pump suction inlet section to eliminate unnecessary bends or elbows. Locations were selected for the pressure measurements, temperature measurements, flow measurements, and grab sample ports. A data acquisition system was defined. DOE

HYDROGEN PRODUCTION FROM THE PHOTOSYNTHETIC BACTERIUM RHODOPSEUDOMONAS SPHAEROIDES Ph.D. Thesis
B. A. Macler Jun. 1981 147 p refs
(Contract W-7405-eng-48)
(DE81-025831; LBL-12877) Avail: NTIS HC A07/MF A01

Rhodopseudomonas sphaeroides can produce H2 gas under certain conditions when supplied with an appropriate reduced carbon source. It was determined that the enzyme nitrogenase is responsible for this activity. Maximum rates of H2 biosynthesis were achieved when the organism was grown anaerobically in the light in a medium containing minimal amounts of reduced nitrogen. An atmosphere low in N2 also increased H2 yields. The organism can utilize lactate, malate, fructose or sucrose to produce H2. Ammonium ion completely inhibited H2 production completely and irreversibly in vivo when present above 8% in the atmosphere. N2 did not completely suppress H2 production at any level. Carbon monoxide at 10% in the atmosphere did not affect metabolism or inhibit H2 production. Monofluoroacetate inhibited H2 production from 10 to 70% depending on the strain and the carbon compound used for substrate. DOE

TRANSPORTATION FUELS FROM SYNTHETIC GAS
E. G. Baker and R. Cuello Aug. 1981 25 p refs
(Contract DE-AC06-76RL-01830)
(DE81-029614; PNL-3951) Avail: NTIS HC A02/MF A01

Twenty-five experimental Fischer-Tropsch synthesis runs were made with 14 different catalysts or combinations of catalysts using a Berty reactor system. Two catalysts showed increased selectivity to transportation fuels compared to typical Fischer-Tropsch catalysts. With a catalyst consisting of 5 wt percent ruthenium impregnated on a Y zeolite (run number 24), 63 to 70 wt percent of the hydrocarbon product was in the gasoline boiling range. Using a 0.5 wt percent ruthenium on alumina catalyst (run number 22), 64 to 78 wt percent of the hydrocarbon product was in the diesel fuel boiling range. Not enough sample was produced to determine the octane number of the gasoline from run number 24, but it is probably somewhat better than typical Fischer-Tropsch gasoline (approx. 50) and less than unleaded gasoline (approx. 88). The diesel fuel produced in run number 22 consisted of mostly straight chained paraffins and should be an excellent transportation fuel without further refining. The yield of transportation fuels from biomass via gasification and the Fischer-Tropsch synthesis with the ruthenium catalysts is somewhat less, on a Btu basis, than methanol (via gasification) and wood oil (PERC and LBL processes) yields from biomass.

CHEMISTRY AND CATALYSIS OF COAL LIQUEFACTION: CATALYTIC AND THERMAL UPGRADING OF COAL LIQUID AND HYDROGENATION OF CO TO PRODUCE FUELS

Quarterly Progress Report, Oct. - Dec. 1979

W. H. Wiser Aug. 1980 73 p refs
(Contract DE-AC01-79ET-14700)
(DOE/ET-14700/1) Avail: NTIS HC A04/MF A01

Studies of the chemistry and catalysis of coal hydrogenation have been initiated with the construction of a flow reactor for extraction of coal and the development of analytical techniques. Work was initiated on the design of a rotor for (13)C nuclear magnetic resonance of solid coal and extracted coal. Studies on momentum, heat and mass transfer in a fluidized bed simulated conditions for coal hydrogenation and were used to investigate effects of particle size and solids loading. The catalytic upgrading of coal-derived liquids is investigated by studies of the catalytic denitrogenation, desulfurization, deoxygenation and cracking of model compounds. Aging of Co-Mo catalysts was found to reduce the number of active sites but not the nature of the sites. A Raney catalyst is being developed for the hydrogenation of carbon monoxide. Temperature programmed desorption was used to study the properties of an iron manganese oxide catalyst previously shown to give high yields of C2-C10 hydrocarbons. DOE

N82-11260# Utah Univ., Salt Lake City. Dept. of Mining and Fuels Engineering.

CHEMISTRY AND CATALYSIS OF COAL LIQUEFACTION: CATALYTIC AND THERMAL UPGRADING OF COAL LIQUID AND HYDROGENATION OF CO TO PRODUCE FUELS

Quarterly Progress Report, Jan. - Mar. 1980

Wendell H. Wiser Aug. 1980 70 p refs
(Contract DE-AC22-70ET-14700)
(DOE/ET-14700/2) Avail: NTIS HC A04/MF A01

Analysis of a group of coal liquids produced by catalytic hydrogenation of Utah coals with ZnCl2 catalyst was begun. Carbon-13 nuclear magnetic resonance and liquid chromatography techniques will be used to correlate chemical properties with hydrogenation reactivity. Equipment previously used for downflow measurements of heat and momentum transfer in a gas-coal suspension was modified for upflow measurements. The catalytic hydrodeoxygenation of methyl benzoate has been studied to elucidate the reactions of ester during upgrading of coal-derived liquids. The kinetics of hydrogenation of phenanthrene have also been determined. The catalytic cracking mechanism of octahydroanthracene is reported in detail. Studies of the hydrodesulfurization of thiophene indicate that some thiophene is strongly adsorbed as a hydrogen-deficient polymer on cobalt-molybdate catalyst. Part of the polymer can be desorbed as thiophene by hydrogenation. Poisoning of the catalyst inhibits the hydrosulfurization activity to a greater degree than the hydrogenation activity. Iron-manganese catalysts for carbon monoxide hydrogenation is studied to determine the role of iron carbide formation on selectivity. Pure iron catalyst forms a Hagg iron carbide phase unde reaction conditions. DOE

HYDROGEN STORAGE-BED DESIGN FOR TRITIUM SYSTEMS TEST ASSEMBLY

Hatice S. Cullingford, Michael G. Wheeler, and John W. McMullen 1981 18 p refs Presented at the Intern. Symp. on Metal-Hydrogen Systems, Miami Beach, Fla., 13-15 Apr. 1981
(Contract W-7405-eng-36)
(DE81-025336; LA-UR-81-1906; CONF-810497-1) Avail: NTIS HC A02/MF A01

The Los Alamos National Laboratory complete the design of a hydrogen storage bed for the Tritium Systems Test Assembly (TSTA). Our objective is to store hydrogen isotopes as uranium hydrides and recover them by dehydriding. The specific use of the storage bed is to store DT gas as U(D,T)3 when it is required for the TSTA. The hydrogen storage bed consists of a primary container in which uranium powder is stored and a secondary container for a second level of safety in gas confinement. The primary container, inlet and outlet gas lines, cartridge heaters, and instrumentation are assembled in the secondary container. The design of the hydrogen storage bed is presented, along with the modeling and analysis of the bed behavior during hydriding-dehydriding cycles. DOE

CORRELATION OF SHOCK-INITIATION TESTS FOR EXPLOSIVES AND PROPELLANTS

A. M. Weston, J. R. Walton, E. James, E. Lee, and L. G. Green Jul. 1981 84 p refs Presented a the 7th Intern. Symp. on Detonation, Annapolis, 16-19 Jun. 1981
(DE81-026533; UCRL-85614; CONF-810602-31) Avail: NTIS HC A05/MF A01

Comparison among the shock initiation tests most commonly in use for evaluating explosives and propellants reveal a strong correlation of the results. Lagrange hydrodynamic calculations of the tests are employed to establish the precise nature of the correlation, but we also show how relatively simple approximations to the hydrodynamic results can be used to evaluate shock initiation thresholds. The results of this study provide both an equivalence relationship between the standard tests and a basis for evaluating shock initiation thresholds for hazard conditions in general. The correlations are quite reliably applied to propellants and explosives prepared at a near maximum density. Our analysis of available data shows that the correlation for porous materials is still uncertain. DOE

HOT-SPOT INITIATION OF HETEROGENEOUS EXPLOSIVES
M. E. Kipp, J. W. Nonziato, R. E. Setchell, and E. K. Walsh (Florida Univ., Gainesville) 1981 11 p refs Presented at 7th Symp. on Detonation, Annapolis, 19 Jun. 1981
(Contract DE-AC04-76DP-00789; Grant NSF ENG-76-19677)
(DE81-027801; SAND-80-2438C) Avail: NTIS HC A02/MF A01

It is generally accepted that the shock initiation of heterogeneous explosives begins with the formation of hot spots in the vicinity of microstructural defects such as voids, grain boundaries, and phase boundaries where three can be significant localized deformation as a result of material viscosity, plastic work, and intergranular friction. This phenomenon is described in the context of a recently developed theory of chemically reacting, multiphase mixtures. In particular, we consider a granular explosive with an energetic binder (e.g. PBX-9404) and represent it as a three-phase, saturated mixture consisting of the granular reactant, the binder, phase, and the product gases. Under dynamic loading, viscous dissipation results in high temperatures in the binder phase which subsequently thermally explodes to form product gases. Decomposition of the granular reactant is achieved by laminar grain burning. This model was incorporated into a 1-D Lagrangian finite-difference code (WONDY) and a evolution of compressive shock and acceleration (ramp) waves were calculated for PBX-9404. DOE

LLNL UNDERGROUND COAL GASIFICATION PROJECT Quarterly Progress Report, Jan. - Mar. 1981
D. U. Olness, ed. and Wallace Clements, ed. 27 Apr. 1981 42 p refs
(Contract W-7405-eng-48)
(DE81-030634; UCRL-50026-81-1) Avail: NTIS HC A02/MF A01

Laboratory studies of forward gasification through drilled holes in small blocks of coal, approximately 1 foot on a side were conducted. Such studies give insight into cavity growth mechanisms and particulate production. However, because of the small dimensions involved, the information these tests provide is necessarily limited to aspects of cavity growth at very early times. The preliminary process design of the Tono No. 1 field experiment in Washington was completed. The experimental plan and operational strategy was developed to ensure that the injection point remains near the bottom of the coal seam and that the experiment continues at least until a period of stable operation is reached and sustained for a time. A mathematical model for the small coal block experiments in order to further our understanding of the physical and chemical processes governing the burning of the coal and the growth of the cavity within the block is being developed. Groundwater samples from wells located at distances of a few feet to several hundred feet from the gasification cavities were collected before, during, and after each of the Hoe Creek tests. The analysis of the groundwater contamination data pertinent to the Hoe Creek No. 3 test was completed. DOE

AC FIRING ABILITY OF DETONATION Final Report
V. Arasu, P. Satyavratan, and R. Vedam 14 Dec. 1980 21 p refs Presented at the CMRS Silver Jubilee Symp. on Appl. of Electron. and Instrumentation for Mines, Tunnels and Dams, Dhanbad, India, 14 Dec. 1980
(PB81-216053; IDL/R/D-80) Avail: NTIS HC A02/MF A01 CSCL 19A

The series firing ability of detonators when subjected to AC mains voltage is analyzed. The analysis and conclusions are made based on actual experiments conducted with the help of a custom built electronic firing system. At lower currents there exists a narrow band of critical starting angles of which misfires occur. This critical zone is explained based on a hypothesis of desensitization of the fusehead by the current flowing during the falling slope region. This phenomena is less severe at higher currents which eliminates misfires under AC mains voltage firing. GRA

A series of fixed-bed coal gasification and pyrolysis tests were performed in a laboratory scale reactor of 6.6 cm inside diameter. Chemical analyses were conducted on the product gas, the aqueous condensate, the tar, and the solid residue from the tests. The effects of process variables, such as feed mode, catalytic treatment, pressure, mesh size, and coal type, upon byproduct and pollutant yields are described. The production of gaseous sulfur compounds, benezene and derivatives (BTX), phenolics (phenol, cresols, and xylenols), and tar were measured, and the fate of trace elements such as arsenic, selenium, and lead were determined. Byproduct production associated with the pyrolysis phase of gasification was investigated with emphasis on the effects of particle size, residence time, and atmosphere. Continuous operation was found to result in greatly reduced tar and phenolic production. GRA

Federal environmental regulations affecting gas supply technologies are reviewed. The technological and environmental state of the art of each gas supply technology was analyzed with the help of a series of experts, in gas supply technology. Based on regulatory requirements technology status, and current environmental knowledge, the environmental issues associated with each technology area were identified. Environmental research being performed by government, industry and educational institutions was identified by computerized literature search and reviewed applicability recommended research activities for GRI funding were developed and a suitable prioritization methodology was devised. This is the third of five region-specific feasibility studies on regional production of ethanol. It was found that deproteinized whey resources in this region of New York could support ethanol production in amounts ranging from about 1.5 million to 5 million gallons a year while also producing a high-protein, high-mineral animal feed. Ethanol is an octane booster which can be used as a gasoline extender to produce gashol. GRA

R. D. Shaffer, J. T. McCluskey, S. Gulkis, M. Klein, and T. Kuiper *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 1-3 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 03A

A K-band reflected-wave ruby maser was used on the 64-meter (DSS-43) antenna at the Tidbinbilla Tracking Station, near Canberra, Australia. Spectral line observations were carried out near 22 GHz for water vapor sources and near 24 GHz for ammonia sources. The water vapor observations were made in the direction of known southern OH and H2O maser sources. All of the previously detected water line sources examined were detected. In addition, two new water vapor maser sources were discovered, G301.1+1.1and G308.9+0.1. The spectrum of G301.0+1.1 is presented six ammonia sources were found: G291.3-0.7, G305.4+0.2, G322.2+0.6, G327.3-0.5, G333.6-0.2, and G268.4-0.8. Spectra of two of these sources, G291.3-0.7 (RCW 57) and G305.4+0.2, are presented. Both show clearly the presence of the quadrupole splitting satellite lines that will allow the determination of NH3 optical depths in these clouds. J.M.S.

NETWORKS CONSOLIDATION PROGRAM c14

M. L. Yeater and D. T. Herrman *In its* The Telecommun. and Data Acquisiton Rept. 15 Oct. 1981 p 19-24 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 22D

A single consolidated network of ground tracking stations to replace the present two ground-based spacecraft tracking networks is proposed. The proposed consolidated network uses facilities that are now included in the Ground Spaceflight Tracking and Data Network (GSTDN), operated by Goddard Space Flight (GSFC), as well as the existing Deep Space Network (DSN), operated by Jet Propulsion Laboratory (JPL). These facilities are combined and modified to provide a consolidated network managed and operated by JPL and capable of supporting the set of planetary and Highly Elliptical Earth Orbiter (HEEO) missions planned for the Tracking and Data Relay Satellite System (TDRSS) era. The consolidated network is planned to be operational after the TDRSS becomes operational. It will continue to support planetary missions that are now supported by the DSN and also provide support to a broad class of other spacecraft missions which are not compatible with or which, for other reasons, cannot be supported by the TDRSS. J.M.S.

STRATEGIES FOR WEATHER-DEPENDENT DATA ACQUISITION c32

E. C. Posner *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 34-46 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 20N

A strategy for data acquisition from a very distant spacecraft is presented, when the system performance can be severely degraded by the Earth's weather due to the high microwave frequency being used. When there is no minimum rate to be maintained, the optimum strategy is the greedy strategy, which always transmits at the single rate which maximizes the expected data returned. If there is a minimum data rate, the optimum strategy transmits simultaneously at the minimum or base data rate and at a bonus data rate. A coding system designed for the bandwidth-constrained degraded broadcast channels used. The optimum version of this system can, under realistic assumptions, save on the order of 5 dB over the conservative strategy of just transmitting at a single lower data rate. J.M.S.

VIRTUAL CENTER ARRAYING c32

L. J. Deutsch, R. G. Lipes, and R. L. Miller *In its* the Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 47-52 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 20N

Methods to increase the amount of data that can be received from outer planet missions are described with emphasis on antenna arraying systems designed to increase the total effective aperture of the receiving system. One such method is virtual center arraying (VCA). In VCA, a combined carrier reference is derived at a point that is, conceptually, the geometric center of the array. This point need not coincide with any of the actual antennas of the array. A noise analysis of the VCA system is given along with formulas for the phase jitter as a function of loop bandwidths and the amount of loop damping. If the ratio of the loop bandwidths of the center loop to the vertex loops is greater than 100, then the jitter is very nearly equal to that expected for ideal combined carrier referencing. J.M.S.

SYMBOL ERROR RATE PERFORMANCE EVALUATION OF THE LM37 MULTIMEGABIT TELEMETRY MODULATOR-DEMODULATOR UNIT c17

H. Malek *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 59-74 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 09F

The LM37 multimegabit telemetry modulator-demodulator unit was tested for evaluation of its symbol error rate (SER) performance. Using an automated test setup, the SER tests were carried out at various symbol rates and signal-to-noise ratios (SNR), ranging from +10 to -10 dB. With the aid of a specially designed error detector and a stabilized signal and noise summation unit, measurement of the SER at low SNR was possible. The results of the tests show that at symbol rates below 20 megasymbols per second (MS)s) and input SNR above -6 dB, the SER performance of the modem is within the specified 0.65 to 1.5 dB of the theoretical error curve. At symbol rates above 20 MS/s, the specification is met at SNR's down to -2 dB. The results of the SER tests are presented with the description of the test setup and the measurement procedure. J.M.S.

CRYOGENIC FILTERS FOR RFI PROTECTION c33
J. J. Bautista and S. M. Petty *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 94-98 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 09C

The increased bandwidth and sensitivity of the DSN maser-based receiver systems along with the increase in worldwide microwave spectrum usage dictated the need for employing additional measures to protect these systems from RFI (radio frequency inerference). Both in-band and out-of-band microwave signals at the input of the Deep Space Network (DSN) traveling wave masers (TWM) can adversely affect the maser performance in a variety of ways. Filters fabricated from superconducting materials operating below their superconducting transition temperature (Tc) possess the most potential for providing the necessary RFI protection without degrading the system performance. Author

TRAVELING-WAVE MASER, CLOSED CYCLE REFRIGERATOR AUTOMATION c36
J. A. McNeil (Loyola Marymount Univ., Los Angeles) and S. M. Petty *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 99-103 (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 20E

At the present time all traveling-wave maser and closed-cycle refrigerator system (TWM-CCR) and their power supply and helium compressor assemblies are operated manually. Many man-hours are required of highly trained and experienced operators, resulting in high operator cost. Of greater importance are the problems of unpredictable failure and long downtimes. Since field performance is not monitored, system degradation is detected only when it has progressed to the point of catastrophic failure. Without the aid of performance histories, failure diagnosis is arduous and slow. Rational and functional requirements for the TWM-CCR Automation project are the following: (1) to improve reliability and reduce downtime by providing unattended monitor and control, alarm and fault location, failure prediction and self-corrective action; (2) to reduce operator cost by providing automatic tuning and cooldown procedures; and (3) to improve system operations and development by providing the needed engineering data. L.F.M.

DIGITAL SAR PROCESSING USING A FAST POLYNOMIAL TRANSFORM c32
S. Butman, R. Lipes, A. Rubin, and T. K. Truong *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 104-112 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 17I

A new digital processing algorithm based on the fast polynomial transform is developed for producing images from Synthetic Aperture Radar data. This algorithm enables the computation of the two dimensional cyclic correlation of the raw echo data with the impulse response of a point target, thereby reducing distortions inherent in one dimensional transforms. This SAR processing technique was evaluated on a general-purpose computer and an actual Seasat SAR image was produced. However, regular production runs will require a dedicated facility. It is expected that such a new SAR processing algorithm could provide the basis for a real-time SAR correlator implementation in the Deep Space Network. Author

MINIMIZING THE TIME TO TROUBLESHOOT A FAILED SYSTEM c38
E. J. Subelman (California Univ., Los Angeles) *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 113-117 (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 14D

A procedure is presented to determine the order in which to inspect the components of a failed series system so as to minimize the expected time until the failed component is isolated. The model includes the case in which inspection of a component may falsely indicate the component is functioning. Author

N82-11297*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
AN ERROR BUDGET FOR THE JPL HYDROGEN MASER RECEIVER c36
C. A. Greenhall *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 118-126 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 20E

The hydrogen maser receiver is a synthesizer that converts the maser signal, at about 1420 MHz, to a set of output signals at 100, 20, 10, 5, 1, and 0.1 MHz. The contribution of the receiver and its component modules to the frequency instability and phase noise of each of its outputs is estimated, and these results are compared to published measurements of the 100-MHz output of the frequency standard, which consists of a maser plus its receiver. One can then assess how much the receiver degrades the performance of the frequency standard. L.F.M.

SPECIAL ACTIVITY UTILIZATION OF GDSCC ANTENNAS DURING 1980

c14

E. B. Jackson and J. W. Hudson (Bendix Field Engineering Corp.) *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 192-196 (For primary document see N82-11279 02-31)

Avail: NTIS HC A11/MF A01 CSCL 22D

In addition to direct spacecraft project support, the GDSCC antennas also support special activities. These activities can be categorized as advanced system program, crustal dynamics program, and radio astronomy program activities. The goals of these types of activities that received tracking support at Goldstone are discussed. All Goldstone stations (DSSs 11, 12, 13, and 14) provided a total of 2814.5 tracking hours to special activities during the period January through December 1980. T.M.

AN OPTIMIZATION MODEL FOR ENERGY GENERATION AND DISTRIBUTION IN A DYNAMIC FACILITY **c81**
F. L. Lansing *In its* The Telecommun. and Data Acquisition Rept. 15 Oct. 1981 p 206-222 refs (For primary document see N82-11279 02-31)
Avail: NTIS HC A11/MF A01 CSCL 05A

An analytical model is described using linear programming for the optimum generation and distribution of energy demands among competing energy resources and different economic criteria. The model, which will be used as a general engineering tool in the analysis of the Deep Space Network ground facility, considers several essential decisions for better design and operation. The decisions sought for the particular energy application include: the optimum time to build an assembly of elements, inclusion of a storage medium of some type, and the size or capacity of the elements that will minimize the total life-cycle cost over a given number of years. The model, which is structured in multiple time divisions, employ the decomposition principle for large-size matrices, the branch-and-bound method in mixed-integer programming, and the revised simplex technique for efficient and economic computer use. STIRLING CYCLE CRYOGENIC COOLER Patent Application
Allen Sherman, Max G. Gasser, Phillip A. Studer, Michael Goldowsky (Philips Labs., Briarcliff Manor, N.Y.), and Alexander Daniels (Philips Labs., Briarcliff Manor, N.Y.) Filed 2 Oct. 1981 26 p
(NASA-Case-GSC-12697-1; US-Patent-Appl-SN-308204) Avail: NTIS HC A03/MF A01 CSCL 13I

A long lifetime Stirling cycle cryogenic cooler particularly adapted for space applications comprised of a compressor section centrally aligned end to end with an expansion section and respectively including a reciprocating compressor piston and displacer radially suspended in interconnecting cylindrical housings by active magnetic bearings and having adjacent reduced clearance regions. One or more of these regions operates as clearance seals. The piston and displacer are reciprocated in their housings by linear drive motors to vary the volume of respectively adjacent compression and expansion spaces which contain a gaseous working fluid and a thermal regenerator to effect Stirling cycle cryogenic cooling. Electrical circuit means are included for energizing the magnetic bearings and for controlling the stroke amplitudes and relative phase angle between the compressor piston and displacer during the cooling cycle. DESIGN OF AIRPORT PAVEMENTS FOR EXPANSIVE SOILS Final Report
R. Gordon McKeen Jan. 1981 198 p refs
(Contract F29601-76-C-0051)
(AD-A104660; NMERI-AP-37; FAA-RD-81-25) Avail: NTIS HC A09/MF A01 CSCL 08/13

Expansive soil subgrades exhibit volume changes with variation in moisture condition. These changes result in differential movement of airport pavements resting on these soils. Special design procedures must be used to account for the expansive soil activity during equilibration. In addition, special precautions are required to protect the subgrade from moisture variation with climate. Measurement of soil suction is a key step in quantifying moisture-induced soil behavior. Procedures are outlined for suction characterization of the soil and for estimating the in situ differential movement likely to occur under the pavement. Once the wavelength and amplitude characteristics of the differential movement are obtained, design calculations to select the thickness and materials for the pavement may proceed GRA

AN INEXPENSIVE, PORTABLE VIBRACORING SYSTEM FOR SHALLOW-WATER AND LAND APPLICATION
Kenneth Finkelstein Jul. 1981 16 p refs
(AD-A104323; CERC-CETA-81-8) Avail: NTIS HC A02/MF A01 CSCL 14/2

A portable vibracoring system provides an efficient, rapid, and safe means of extracting cores up to 33 feet (10 meters) long. Short cores (< 10 feet or 3 meters long) are also obtained with a part of the system. This report describes the system and the coring procedures for intrusion, extraction, and packaging. The coring system is composed of the following modifications of existing designs: (a) a quick fasten-release clamp that attaches the vibrator head to the coring pipe (the clamp moves up and down the coring pipe like a 'sleeve,' eliminating having to completely remove the unit) and (b) a stable tripod with four separate, portable components. During extraction, the core is stabilized in a vertical position by a spring-loaded metal gate, using a core pipe slot cut into the tripod headplate, until extraction is completed. Author (GRA)

PROBABILISTIC MODELING OF SUBGRADE SOIL STRENGTHS Final Report
Yu T. Chou Sep. 1981 76 p refs
(DA Proj. 4A1-61101-A9-1D)
(AD-A104336; WES/MP/GL-81-5) Avail: NTIS HC A05/MF A01 CSCL 13/2

A concept of spatial average in probabilistic modeling of subgrade soil strength is presented. The advantage of the application of spatial average to pavement engineering is explained. The link between the concept and the overall probability-based pavement design procedure is formulated and explained. In the earlier part of the report, a literature review of the concept and procedure of probabilistic design of pavements, which includes the concepts of variations and reliability, is presented. Finally, an outline of a probability based pavement design procedure for the Corps of Engineers is presented. Author (GRA)

ENERGY ANALYSIS SAMPLE BUILDING DATA
Mar. 1981 34 p refs
(Contract DE-AC01-78CS-20057)
(DE81-027188; DOE/CS-20057/T5) Avail: NTIS
HC A03/MF A01

Sample building data for energy calculations necessary for the comparative analysis between the proposed energy calculation procedure and the procedures using comprehensive hourly simulation of HVAC systems are presented. The comparison calculation includes data for the terminal reheat system, double-duct system, heat reclaim system, and standard VAV system for a hypothetical 20-story office building in Washington, DC. Each is evaluated in conjunction with electric centrifugal chiller and gas-fired boiler. DOE

N82-11319# American Society of Heating, Refrigerating and Air-Conditioning Engineers, New York. Subcommittee for Simplified Energy Conversion.
PROPOSED SIMPLIFIED ENERGY CALCULATION PROCEDURE FOR USE IN ENERGY CONSERVATION STANDARDS ACTIVITIES
Tammi Kasuda Mar. 1981 90 p refs
(Contract DE-AC01-78CS-20057)
(DE81-027190; DOE/CS-20057/T6) Avail: NTIS
HC A05/MF A01

In order to circumvent various difficulties involved in using the computer simulation-based building energy analysis procedure, a simplified manual procedure suitable for commercial buildings (internal and solar heat gain dominating over the envelope conduction heat transfer) was developed. This modified bin method compared favorably with seven computer simulation-based procedures, at least for a typical office building analysis, for Washington, DC climate. The basic principle of the proposed procedure, sample building data, and the results of parallel calculations with seven computer simulation-based energy analysis programs are described. DOE

SAMPLING DESIGN FOR THE 1980 COMMERCIAL AND MULTIFAMILY RESIDENTIAL BUILDING SURVEY
W. M. Bowen, A. R. Olsen, and A. L. Nieves Jun. 1981 98 p
(Contract DE-AC06-76RL-01830)
(DE81-028783; PNL-3883) Avail: NTIS HC A05/MF A01

The extent to which new building design practices comply with the proposed 1980 energy budget levels for commercial and multifamily residential building designs (DEB-80) can be assessed by: (1) identifying small number of building types which account for the majority of commercial buildings constructed in the U.S.A.; (2) conducting a separate survey for each building type; and (3) including only buildings designed during 1980. For each building, the design energy consumption (DEC-80) will be determined by the DOE2.1 computer program. The quantity X = (DEC-80 - DEB-80). These X quantities can then be used to compute sample statistics. Inferences about nationwide compliance with DEB-80 may then be made for each building type. Details of the population, sampling frame, stratification, sample size, and implementation of the sampling plan are provided. DOE

ASSESSMENT OF ROOFING RESEARCH
James N. Robinson Jul. 1981 59 p refs
(Contract W-7405-eng-26)
(DE81-027077; ORNL/TM-7640) Avail: NTIS
HC A04/MF A01

Problems related to roofing are assessed within the context of energy conservation. Appropriate actions for existing roofs, new roofs, and future roofs are ordered into a thermally efficient roofing plan, and priorities for its implementation are proposed. The methodology used in performing the assessment, an overview of issues encountered during the assessment, and the thermally efficient roofing plan that is recommended for implementation are given. DOE

N82-11323# National Bureau of Standards, Washington, D.C.
ENERGY ANALYSIS FOR A SAMPLE BUILDING BY THE PROPOSED ASHRAE SIMPLIFIED METHOD
T. Kasuda and K. Ishii Jan. 1981 265 p
(Contract DE-AC01-78CS-20057)
(DE81-027189; DOE/CS-20057/T4) Avail: NTIS
HC A12/MF A01

An energy analysis of a sample office building located in Washington, DC using the proposed ASHRAE method is presented. Calculations for space load are presented. The calculations for the energy distribution systems (air conditioning, outdoor air control, humidity control, airduct systems) are given. Equipment system calculations, and calculations for the annual energy consumption for air conditioning are presented. DOE

N82-11324# Syracuse Research Corp., N. Y. Energy Research Center.
THREE PROTOTYPE DESIGNS FOR AN EXTERIOR-MOUNTED, INTERIOR-OPERATED, MOVABLE INSULATION SYSTEM Final Report
Greg Dike, David Florey, Arthur Levy, Seymour Sacks, and Laurence Kinney Mar. 1981 357 p Sponsored in part by the New York State Energy Research and Development Authority
(Contract DE-FC02-80CS-30584)
(DE81-025586; DOE/CS-30584/1) Avail: NTIS
HC A16/MF A01

Design, construction, and preliminary testing of three exterior-mounted, interior-operated, movable window insulation systems are described. Two of the systems are hinged insulated shutter systems and the third is a sliding shutter system. The advantages of such systems are discussed. Development, schematics, and operation of the prototype systems are described. The thermal performance of the prototype shutters is analyzed. A preliminary market assessment study is reported. The prototype fabrication and test plan and estimated costs of the proposed designs are presented. DOE

USER NEEDS FOR SOLAR DECISION-MAKING TOOLS: THE HOMEBUILDING INDUSTRY Final Report

Min Kantrowitz, John Kurtz, and Kimball Hart 1981 131 p refs Prepared in cooperation with Midwest Research Inst., Golden, Colo.
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-027293; SERI/TR-98252-1b) Avail: NTIS HC A07/MF A01

The need for decision tools and design tools to be used by decision makers considering using solar energy in the single-family residential construction sector was studied. Three builder groups were found based upon decision making patterns relative to innovation and a five-step decision process. Eleven existing design tools were reviewed against identified user needs. The principal conclusions are that decision tools are largely lacking and design tools do not easily fit user needs. Recommendations for further study are made. DOE

STOCHASTIC MODELS FOR DEPENDENT LOAD PROCESSES

Y. K. Wen and H. T. Pearce Mar. 1981 81 p refs
(Grant NSF CME-79-18053)
(PB81-219735; SER-489; UILU-ENG-81-2002) Avail: NTIS HC A05/MF A01 CSCL 13M

Stochastic models for dependent loads and load effects are presented. The effects of stochastic dependencies on load combination and structural reliability were investigated in the context of summation of pulse processes in which occurrence time, intensity, and duration are allowed to be correlated within each process and between processes. Approximate analytical solutions based on a load coincidence method were obtained and verified by Monte-Carlo simulations. It is found that while within-load positive correlations may generally have only moderate effect on the combined load probability, between-load dependencies may be dominant factors and significantly increase the probability of threshold level being exceeded by the combined load. Author

N82-11328# California Polytechnic State Univ., San Luis Obispo. Dept. of Architectural Engineering.

RACKING TESTS OF NON-STRUCTURAL BUILDING PARTITIONS (THE BEHAVIOR OF ARCHITECTURAL (NONSTRUCTURAL) BUILDING COMPONENTS DURING EARTHQUAKES) Final Technical Report

Satwant S. Rihal Dec. 1980 114 p refs
(Grant NSF PFR-78-23085)
(PB81-220790; ARCE-R80-1; NSF/RA-800526) Avail: NTIS HC A06/MF A01 CSCL 13M

The effects of inter-story displacement (drift) during simulated earthquake conditions are reported. The correlation between inter-story relative displacement and building partition behavior, the threshold levels of partition damage, and the fundamental characteristics of non-structural building partitions (stiffness, energy absorption capacity, and strength) under horizontal racking actions were investigated. Parameters in this study consist of geometry of partition configuration and placement of gypsum wallboard panels. Author

EVALUATION OF BASE COURSES FOR FLEXIBLE PAVEMENTS Final Report

W. G. Mullen and B. D. Barnes Feb. 1981 100 p refs Prepared in cooperation with the North Carolina Dept. of Transportation and Highway Safety, and DOT-FHA
(PB81-218372; ERSD-100-67-5; FHWA/MC-81/002) Avail: NTIS HC A05/MF A01 CSCL 13B

Nineteen pavement sections monitored over a period of approximately ten years were evaluated to determine the influence of base course parameters on the performance of primary flexible pavement systems in Piedmont, North Carolina. The present serviceability rating concept was used as a measure of performance. The findings that indicate roughness measures are insensitive to changes in subjective performance and that present design procedures are adequate and probably conservative for the pavements studied. Bituminous concrete base courses are not necessarily structurally superior to coarse aggregate base courses, and Benkleman beam deflections are poor indicators of performance. Author

MODIFIED-SULFUR CEMENTS FOR USE IN CONCRETES, FLEXIBLE PAVINGS, COATINGS, AND GROUTS

W. C. McBee, T. A. Sullivan, and B. W. Jong May 1981 30 p refs
(PB81-226870; BM-RI-8545) Avail: NTIS HC A03/MF A01 CSCL 13C

A family of modified-sulfur cements was developed for the preparation of construction materials with improved properties. Various types of sulfur cements were prepared by reacting sulfur with mixtures of dicyclopentadiene and oligomers of cyclopentadiene. Durable cements were prepared with structural characteristics ranging from rigid to flexible. These cements were used to prepare corrosion-resistant materials for use in a wide variety of industrial applications where resistance to acidic and salt conditions is needed. These materials were prepared as rigid concretes, flexible pavings, spray coatings, and grouts. Production of modified-sulfur cements in a commercial-size plant was demonstrated. GRA

CAVITY-BACKED, MICRO-STRIP DIPOLE ANTENNA ARRAY Patent
Haynes Ellis, Jr., inventor (to NASA) (Rockwell International Corp., Downey, Calif.) Issued 1 Sep. 1981 7 p Filed 30 Apr. 1980 Supersedes N80-24511 (18 - 15, p 1969) Sponsored by NASA
(NASA-Case-MSC-18606-1; US-Patent-4,287,518; US-Patent-Appl-SN-145206; US-Patent-Class-343-700MS; US-Patent-Class-343-708; US-Patent-Class-343-795; US-Patent-Class-343-846; US-Patent-Class-343-727) Avail: US Patent and Trademark Office CSCL 20N

A flush-mounted antenna assembly includes a generally rectangular, conductive, box structure open along one face to form a cavity. Within the cavity a pair of mutually orthogonal dielectric plane surfaces in an 'egg crate' arrangement are mounted normal to the plane of the open face, each diagonally within the cavity. Each dielectric plane supports a pair of printed circuit dipoles typically each fed from the opposite side of the dielectric plane by a printed 'cone-shaped' feed line trace which also serve as an impedance matching device and functions as a balun connected from an unbalanced strip line external feed. The open face of the conductive cavity can be flush mounted with a randome thereover, the assembly thereby being flush with the skin of a aircraft or space vehicle.

ANTENNA PATTERN MODIFICATION FOR SINGLE REFLECTOR ANTENNAS Final Report
A. S. Milman Jan. 1981 51 p refs
(Contract NAS5-25993)
(NASA-CR-166711) Avail: NTIS HC A04/MF A01 CSCL 20N

The problem of correcting the antenna temperatures observed with a single reflector is addressed from two viewpoints with emphasis on decreasing the level of the side lobes without greatly amplifying the noise. One viewpoint is that of matrix operations where the elements of the matrix are integrals of the antenna pattern. This formulation is directly applicable to developing algorithms. The other is that of an analysis of the problem by treating the antenna as a spatial filter and using Fourier transforms of the antenna pattern. This approach leads to an understanding of the problem, but is not suitable for performing calculations. The method developed can be used to correct data from mechanically-scanned microwave instruments that view Earth from space. A.R.H.

TELECOMMUNICATIONS IN COMETARY ENVIRONMENTS
Warren L. Flock 1 Jul. 1981 43 p refs
(NASA-CR-164956; JPL-Pub-81-84) Avail: NTIS HC A03/MF A01 CSCL 17B

Propagation effects on telecommunications in a cometary environment include those due to dust, the inhomogeneous plasma of the coma and tail, and ionization generated by impact of neutral molecules and dust on the spacecraft. Attenuation caused by dust particles is estimated to be on the order of 10 to the minus 5th power dB for the Halley Intercept Mission. Ionization generated by impact on the spacecraft is estimated to result in an electron content of 10 to the 12th power to 10 to the 13th power el/sq meters (3 eV electrons) along the telecommunications path. An estimate of the electron content due to Comet Halley itself is 10 to the 16th power to 10 to the 17th power el/sq meters, compared to a content of 10 to the 16th power to 10 to the 18th power el/sq meters for the Earth's ionosphere and 10 to the 17th power to 10 to the 18th power el/sq meters for the interplanetary medium. The electron content of the plasma near Comet Halley will cause excess range delay, and a Doppler shift of the signal from the spacecraft will occur in propagation to the rate of change of the path electron content. It is recommended that S and X down-link frequencies by employed to monitor the path electron content and amplitude scintillation and spectral broadening of the received signals. These measurements will provide a quantitative base of knowledge that will be valuable for radio science and telecommunications system design purposes. Author

The use of the Viterbi algorithm in a general context is examined. The generalized transfer function bounds are given which permit the following applications to be carried out: maximum likelihood demodulation of such bandwidth modulations as minimum-shift-keying and continuous phase frequency-shift-keying, demodulation of intersymbol interference and partial response signals, estimation and smoothing, and simultaneous phase synchronization, and data detection. Sufficient conditions are reviewed for tightening Chernoff and Bhattacharyya bounds. R.J.F.

The electromagnetic scattering from a geometrically fat tubular cylinder above a dissipative dielectric half-space has been investigated. Extensive experimental data were obtained and were found to be in agreement with theoretical results. The theory made use of an explicit analytical solution of the scattering from such a cylinder when in a single medium. Because the cylinder is a finite object with two variable geometrical parameters, it represents a very useful model for future experimental studies on the scattering from more complicated objects. Since thin microstrip antennas are inherently narrow band, it is important to have a simple means for tuning the antenna over a wide range. Based on the cavity-model theory, one can expect that the antenna could be tuned like a cavity. Some workers have demonstrated experimentally the tuning with a shorting post in the patch. It is desirable to have a theory which can predict the exact post location for a given operating frequency. To this end, our multipost theory is extended so that a simple algorithm can be applied to a wide frequency range, covering the resonant frequencies of several modes. Using this extended theory, the operating frequencies for many post locations are computed and found to agree with the measured results within a fraction of one percent. In fact, it is believed that the theory can be improved even further. It is also shown that CP can also be obtained by placing a post in a square patch. Again, the theoretical and experimental results are in almost perfect agreement. GRA

We report on research toward a very-low-rate vocoder. This quarter we continued investigation in two areas: the phonetic vocoder and an unsupervised method for vocoding. We introduced phoneme pair probabilities to improve the accuracy of phonetic recognition. We investigated the use of the phonetic vocoder as a tool for semi-automatic labeling of speech. We also experimented with several variations of the phonetic vocoder to improve the intelligibility of the vocoded speech with a moderate increase of the bit rate. Our work in the second area concentrated on developing a novel method of spectral quantization: We quantize a sequence of spectra simultaneously. We are also evaluating a new distance metric that does not require the dynamic programming time warping. Author (GRA)

An algorithm has been developed which estimates the range bias error from measurements made by radars on two platforms within a common detection area. The radars on the platforms each measure the position of two common targets and the difference vector between the measurements. Using a number of these measurements, a least square estimate of the range bias error is determined. Author (GRA)

The finite element method is applied to the boundary value problem of the scatterer. To account for the presence of a real Earth, multiple expansions are used to deal with the air-earth half spaces. The technique developed is applicable for metallic or dielectric targets. Computations have been made for scatterers in both free space and the presence of a real Earth. The accuracy and reliability have been checked by shifted sphere solutions, comparison with bistatic radar scattering experiments, and the reciprocity theorem. These comparisons have confirmed the validity of the method. Author (GRA)

The long-range objectives of the Packet Speech Systems Technology Program are to develop and demonstrate techniques for efficient digital speech communication on networks suitable for both voice and data, and to investigate and develop techniques for integrated voice and data communication in packetized networks, including wideband common-user satellite links. Specific areas of concern are: the concentration of statistically fluctuating volumes of voice traffic, the adaptation of communication strategies to varying conditions of network links and traffic volume, and the interconnection of wideband satellite networks to terrestrial systems. The current program has two major thrusts: i.e., the development and refinement of practical low-cost, robust, narrowband, and variable-rate speech algorithms and voice terminal structures; and the establishment of an experimental wideband satellite network to serve as a unique facility for the realistic investigation of voice/data networking strategies. This report covers work in the following areas: digital channel vocoder development; embedded CVSD-based speech waveform encoder design and implementation; development and experimental tests of modular packet voice terminals (PVTs) and local access area (LEXNET) facilities; development of a miniconcentrator facility to mediate the flow of traffic from the LEXNET onto the wideband satellite network, and execution of packet speech experiments using this facility; and definition and planning of, and participation in, experiments on the wideband integrated voice/data network. HC A05/MF A01 CSCL 17/9

This volume presents major results and conclusions of research in resonance extraction techniques from transient electromagnetics data. Section 2 addresses the question of what the best methods of estimating the resonances for this application are. Among the estimation procedures studied are the conventional technique of using an inhomogeneous set of equations, eigenvalue decomposition techniques, Jain's method, and iterative techniques. Section 3 studies procedures for selecting the proper order and eliminating extraneous resonances. The maximum likelihood procedure for order selection is presented in Section 3. This procedure is capable of automatically determining the proper order without any prior knowledge of the noise level. Also, in Section 3, Henderson's procedure for eliminating extraneous resonances is tested by numerical example. The procedures presented in Section 3 allow an efficient, automatic procedure for order selection and resonance estimation to be constructured by using eigenvalue decomposition of the data. Section 4 discusses various practical problems that must be addressed before resonance extraction procedures for a practical radar target recognition system can be designed. GRA

FOURIER ANALYSIS OF BROADBAND, LOW-LEVEL SIGNALS USING SWITCHED INPUTS M.S. Thesis
Gary L. Howarth Jun. 1981 79 p refs
(AD-A104588) Avail: NTIS HC A05/MF A01 CSCL 09/3

A new technique for estimation of the spectrum of an unknown signal is investigated. The technique combines a radiometric method of signal detection (modulating the receiver noise with the assumed signal by alternately connecting and disconnecting the input transducer) with a Fast Fourier Transform processor for spectral analysis. After obtaining averaged spectral estimates with the transducer (antenna) connected and disconnected, the difference is formed and statistical analyses applied to determine statistically significant terms. The significant components comprise the estimate of the spectrum of the signal. Analytical results are derived for sinusoidal signals and uncorrelated, Gaussian noise. Experimental results for both narrow and wideband signals and additive Gaussian noise are presented. Reasonable spectral estimates of a wideband signal are obtained with 16 averages when the composite signal-to-noise ratio is 0 dB. Author (GRA)

US-Patent-Class-335-266; US-Patent-Class-361-141) Avail: US Patent and Trademark Office CSCL 09A

A magnetically latching solenoid includes a pull-in coil and a delatching coil. Each of the coils is constructed with a combination of wire materials, including material of low temperature coefficient of resistivity to enable the solenoid to be operated at cryogenic temperatures while maintaining sufficient coil resistance. An armature is spring-based toward a first position, that may extend beyond the field of force of a permanent magnet. When voltage is temporarily applied across the pull-in magnet, the induced electromagnetic forces overcome the spring force and pulls the armature to a second position within the field of the permanent magnet, which laches the armature in the pulled-in position. Application of voltage across the delatching coil induces electromagnetic force which at least partially temporarily nullifies the field of the permanent magnet at the armature, thereby delatching the armature and allowing the spring to move the armature to the first position.

APPLICATION OF A RARE-EARTH COBALT MAGNET TO

SYNCHRONOUS MOTORS
Hiroshi Yamada 1981 11 p refs In JAPANESE; ENGLISH summary
(NAL-TR-656; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

An experimental hysteresis rotor structure was produced in which a ring made of radially oriented anisotropic magnet material, Alnico 5 which has a large magnetic hysteresis loop, and a yoke made of inner steel are utilized. The prototype hysteresis motor has a large ratio of output power to magnet volume and a large starting torque as compared with conventional hysteresis motors. The structure, torque analysis, torque characteristics and equivalent circuit of the synchronous condition of the prototype synchronous motors are discussed. A comparison of the hysteresis and the permanent-magnet-type synchronous motor is also given. B.W.

MOTOR POWER FACTOR CONTROLLER WITH A REDUCED VOLTAGE STARTER Patent Application
Frank J. Nola, inventor (to NASA) Filed 13 Oct. 1981 17 p
(NASA-Case-MFS-25586-1; US-Patent-Appl-SN-310714) Avail: NTIS HC A02/MF A01 CSCL 09A

A power factor type motor controller is disclosed in which the conventional power factor constant voltage command signal is replaced during a starting interval with a graduated control voltage. This continuation-inpart of a pending patent application (Serial No. 199, 765: Three Phase Factor Controller) provides a means for modifying the operation of the system for a motor start-up interval of 5 to 30 second. Using a ramp generators, an initial ramp-like signal replaces a constant power factor signal supplied by a potentiometer. The ramp-like signal is applied to a 15 terminal where it is summed with an operating power factor signal from phase detectors in order to obtain a control signal for ultimately controlling SCR devices. The SCR devices are turned on at an advancing rate with time responsive to the combination signal described rather than simply a function of a ramp-like signal alone. NASA

LARGE GAIN, NEGATIVE RESISTANCE, AND OSCILLATIONS IN SUPERCONDUCTING QUASIPARTICLE HETERODYNE MIXERS
W. R. McGrath, P. L. Richards, A. D. Smith, H. Van Kempen, R. A. Batchelor, D. Prober, and P. Santhanam 1981 14 p refs Prepared in cooperation with Yale Univ., New Haven Sponsored in part by Netherlands Organization for the Advancement of Pure Research
(Contract N00014-75-C-0496)
(AD-A104534) Avail: NTIS HC A02/MF A01 CSCL 09/5

We have measured the properties of a superconductor-insulator-superconductor (SIS) quasiparticle mixer which is operated in the quantum limit. Single sideband conversion gain larger than +4 dB was observed at 36 GHz with a mixer noise temperature T=9 + or - 6K, which is to be compared with the (Planck) quantum limit h-bar omega/(kln2) approx. 2.5K. Complete 3-port mixer calculations are presented which are in good agreement with the gain measurements. Negative resistance was observed which implies that arbitrarily large gain is available. GRA

(Contract F19628-78-C-0122; AF Proj. 4600)
(AD-A104438; TI-08-79-10; RADC-TR-81-168) Avail: NTIS HC A04/MF A01 CSCL 09/5

The architecture, design and performance of a general purpose, 1,024-stage, programmable transversal filter implemented in CCD/NMOS technology is described. The device features programmability of the reference signal, the filter length and weighting coefficient resolution. Off-ship circuitry is minimized by incorporating both analog and digital support circuitry, on-chip. This results in a monolithic analog signal processing system that has the flexibility to be operated in nine programmable configurations, from 1,024-stages by 1-bit, to 128-stages by 8-bits. The versatility of the device makes it suitable for a wide range of applications, from matched filtering with chirp signals and very long binary sequences, to image correlation and adaptive filtering. The mechanical properties of shielded and unshielded submarine cables (MIL-C-915/8E) were investigated to determine the effect of shielding on cable life, performance, and reliability. Ten cables (five shielded and five unshielded) were selected for laboratory evaluation. A mission profile was developed to establish the mechanical stress limits that cables must endure in service and a test sequence designed to measure tensile strength, flexural abrasion endurance, crush resistance, creep under static tension, and performance in a hull-stuffing tube. The results of this program showed that: (1) DSS-2 cable does not have adequate tensile strength and should have a strength member added. DSS-3 and larger cables have adequate tensile strength with or without the shield; (2) Unshielded DSS-3 type cable does not perform satisfactorily in hull-stuffing tubes; (3) Shielding is not required to meet mission profile specifications for cable crush or flexural abrasion resistance; (4) Construction parameters other than shielding can significantly affect mechanical performance of cable; (5) Unshielded cable construction can result in increased reliability since it permits a thicker single-jacket construction; and (6) Unshielded cable construction can reduce the cost of cable by 8 to 20 percent. HC A07/MF A01 CSCL 09/5

This contract was aimed at establishing the feasibility of an assembly line for manufacturing hybrid microcircuits using tape automated bonding (TAB). This report describes work performed during the pilot line phase of the contract. A purpose of the MM&T work was to demonstrate the viability of the manufacturing approaches with TAB and the determination of the associated yield and cost factors. This report includes an overview of these factors, the methods and equipment employed in the manufacture of approximately 1200 hybrid microcircuits with TAB, and the qualification test results of the circuits using the TAB mounted devices. (AD-A104403; RADC-TR-81-184) Avail: NTIS
HC A03/MF A01 CSCL 14/2

The objectives of this program are to: evaluate the frequency instabilities of quartz crystal resonators as a function of temperature and Q-factors; show the feasibility of low temperature quartz oscillators; and determine the dynamic thermal behavior of SAW quartz oscillators and precise crystal orientation and wave propagation direction with minimized sensitivities. The measurements of the frequency noise of different quartz resonators at room temperature show a correlation between 1/f noise levels and Q-factors, following 1/Q to the 4th power law. This new property was confirmed by measuring the 1/f noise level of a pair of resonators at 300 K, 4.2 K and 1 K. A first theoretical study enables to explain the 1/Q to the 4th power law from the phonon-phonon interactions due to the crystal anharmonicities. Under fast temperature variations frequency shifts are observed in SAW delay lines, which are proportional to the time derivative of the temperature. This dynamic thermal behavior was evaluated for ST cut quartz and found comparable to that one of AT-cut quartz BAW resonators. Therefore such a thermal sensitivity is not admissible for fast warm-up oscillator applications and must be lowered. Author (GRA)

HC A02/MF A01 CSCL 18/6

This report describes work performed in the development of a dielectrically isolated integrated circuit process for fabricating radiation hardened integrated circuits. The improved process, called PEDIC (Post Epitaxial Dielectrically Isolated Circuits), provides advantages over standard DI processes: radiation tolerant improvements, lower cost, faster turnaround time, better electrical performance, and greater packing density. Electrical test data from a 2-input NAND gate circuit fabricated in the PEDIC structure is also given. Author (GRA)

INVESTIGATION OF THE ZINC ELECTRODE REACTION Annual Report, 1 Oct. 1979 - 30 Sep. 1980
James McBreen Dec. 1980 138 p refs
(Contract DE-AC02-76CH-00016)
(DE81-030221; BNL-51370) Avail: NTIS HC A07/MF A01

In nickel-zinc batteries, with pasted zinc electrodes, zinc electrode shape change or redistribution of the active material from the edge of the electrodes toward the center is the major life-limiting factor. In batteries with soluble free electrolyte zinc electrodes, morphology changes, particularly under random cycling conditions, is a major operational problem. Insights and possible solutions to these two problems are considered. The areas covered include: (1) additive and substrate effects on zinc electrode morphology; (2) investigations of zinc electrodes of the second kind; (3) separator effects on zinc electrode shape change; and (4) investigation of the effect of modified charging methods on the morphology and behavior of both pasted and soluble free electrolyte zinc electrodes. CONDUCTOR FATIGUE-LIFE RESEARCH Final Report
G. E. Ramey Jul. 1981 142 p Sponsored by Electric Power Research Inst.
(EPRI Proj. 1278-1)
(DE81-904209; EPRI-EL-1946) Avail: NTIS
HC A07/MF A01

The effects of reducing vibration amplitudes of conductors which had been minimally damaged by aeolian vibration were investigated. Conductors were vibrated at high amplitudes until a predetermined number of strand breaks occurred, after which the vibration was continued at reduced amplitudes. Three different conductors were tested: 795 KCM 26/7, 795 KCM 45/7, and 397.5 KCM 26/7. Two different amplitude reductions were used to establish a threshold value for a maximum reduced amplitude. The amplitude reduction values were determined and conductor sizes and strandings tested. For each set of parameters, four duplicative tests were performed to give statistical credence to the data. The results of the investigation indicated that amplitude reductions arrested fatigue strand breakage in each case. DOE

HIGH-VOLTAGE AIR-CORE PULSE TRANSFORMERS
G. J. Rohwein Aug. 1981 34 p refs
(Contract DE-AC04-76DP-00789)
(DE81-030999; SAND-80-0451) Avail: NTIS
HC A03/MF A01

Air core pulse transformers are best suited to applications outside the normal ranges of conventional magnetic core transformers. In general these include charge transfer at high power levels and fast pulse generation with comparatively low energy. When properly designed and constructed, they are capable of delivering high energy transfer efficiency and have demonstrated superior high voltage endurance. The general types designed for high voltage pulse generation and energy transfer applications are described. Special emphasis is given to pulse charging systems which operate up to the multi-megavolt range. DOE

ELECTRIC POWER SUPPLY AND DEMAND FOR THE CONTIGUOUS UNITED STATES, 1981 - 1990
Jul. 1981 584 p refs
(DE81-027126; DOE/EP-0022) Avail: NTIS HC A25/MF A01

The outlook for electric power supply and demand in the United States decade 1981 to 1990 is reviewed from the perspective of reliability and adequacy of service. Electric power supply adequacy as projected for the nine Regional Reliability Council areas of the contiguous United States is reported as well as interruptible load data reported by the Councils. Coeneration is discussed. Each of the 27 electric regions (sub-areas of the nine Council areas) in the contiguous US are studied. A glossary of terms is given. Appendices describe the Council structure, and include a copy of the ERA-411 Manual, which contains all the items to which the Councils were asked to respond. The utilities with included data, the Staff Report, Estimated Electric Demand and Supply for Summer 1981, Contiguous United States dated May 1981 are included. DOE

TESTING AND OPTIMIZING ACTIVE ROTARY FLUX COMPRESSORS
B. M. Carder, D. Eimerl, E. J. Goodwin, J. Trenholme, R. J. Foley, and W. L. Bird (Texas Univ., Austin) 1 Jun. 1981 5 p refs' Presented at the 3rd IEEE Intern. Pulsed Power Conf., Albuquerque, N. Mex., 1-3 Jun. 1981
(Contract W-7405-eng-48)
(DE81-024376; UCRL-85760; CONF-810659-20) Avail: NTIS HC A02/MF A01

The test program for iron wave-wound, rotary flux compressor (ARFC: is described. Peak-current to startup-current ratios of 17 were produced with a rotor tip speed of 60 meters per second. Submillisecond pulse widths were also measured: the minimum, 590 microseconds was obtained at 5607 rpm with an 8-inch diameter, 4-pole rotor. The machine was operated without a high current output switch, proving the feasibility of a novel commutation scheme. A computational code was developed that calcultes the output waveshape of the model ARFC with reasonable accuracy. A second optimization code selects the best design for a given application. This code shows favorable cost effectiveness of large ARFC's over the conventional capacitors to driven flashlamps for large lasers. DOE

ACOUSTIC WAVEGUIDE TECHNIQUE FOR SENSING INCIPIENT FAULTS IN UNDERGROUND POWER-TRANSMISSION CABLES: INCLUDING ACOUSTO-OPTIC TECHNIQUES Final Report
R. T. Harrold Sep. 1981 66 p refs
(Contracts DE-AC01-78ET-29335; ET-78-C-01-2867)
(DE81-029626; DOE/ET-29335/T1) Avail: NTIS HC A04/MF A01

Theoretical and practical studies were made of both the acoustic emission, spectrum signatures associated with underground cable incipient faults, and the attenuation of acoustic waves in waterfilled metal tubes used as waveguided. Based on critical data, it can be estimated that in favorable circumstances, the acoustic waveguide system would only be useful for sensing incipient faults in underground cables of approx. 800 meters of less in length. A system were investigated which acoustic emissions from cable incipient faults impinge on a fiber-optic lightguide and locally change its refractive index and modulate laser light transmitted along the light guide. Experiments based on this concept show that is is possible t sense acoustic emissions with energy levels below on micro-joule. A test of this system using a section of compressed gas-insulated cable with an internal flashover was successfully carried out. DOE

RESEARCH TO DEVELOP GUIDELINES FOR CATHODIC PROTECTION OF CONCENTRIC NEUTRAL CABLES, VOLUME 1 Interim Report
J. A. Hanck and G. Nekoksa Aug. 1981 164 p refs Sponsored by Electric Power Research Inst. 2 Vol.
(EPRI Proj. 1049-1)
(DE81-904195; EPRI-EL-1970-Vol-1) Avail: NTIS HC A08/MF A01

Data associated with corrosion of concentric neutrals (CN) of direct buried cables from field tests conducted at 36 bellholes excavated in California, Oklahoma, and North Carolina are presented. The electrochemical, chemical, bacteriological, and sieve analyses of native soil and imported backfill samples are included. Up to 129 values were determined for each bellhole and stored on cards as a data bank. All values were statistically analyzed and correlated with corrosion found. The severity of corrosion correlated best with CN corrosion potentials, CN resistance measurements, coarseness of backfill, and soil resistivity. The guidelines for installation of cathodic protection on CN cables are to be based upon the evaluation of over 100 experimental cathodic protection systems and upon laboratory testing for protection criteria with and without ac effects. NON-LINEAR EVOLUTION OF AN OBLIQUELY PROPAGATING LANGMUIR WAVE Ph.D. Thesis
Curtis Robert Menyuk 1981 173 p
Avail: Univ. Microfilms Order No. 8121008

In the transition regime between regular and stochastic motion, the electron orbits are complicated and an analytic solution does not appear possible. The asymptotic total damping of the wave is determined using two different approaches. The two methods lead to asymptotic amplitudes which agree to within a factor of two, and the wave's total damping is found to increase significantly when a transition is made between the regular and stochastic regimes, i.e., when resonances overlap. The amplitude oscillations in the trapping regime disappear due to superphase mixing of the many bounce frequencies when the angle of propagation is increased past 14 deg. Dissert. Abstr.

N82-11386 Cornell Univ., Ithaca, N. Y.
THEORETICAL INVESTIGATION OF A PASSIVE SCALAR SUCH AS TEMPERATURE IN ISOTROPIC TURBULENCE Ph.D. Thesis
Robert McDougall Kerr 1981 142 p
Avail: Univ. Microfilms Order No. 8119528

The statistical properties of an isotropic scalar field in turbulence were investigated. It is demonstrated that the decay rate of temperature fluctuation depends on the initial temperature scale size. A simple dynamic model of the spectrum and phenomenological arguments are used to resolve these problems. We show that the observed dependence on initial scale size is in fact a transient and derive a formula which describes the crossover to asymptotic scalar decay. A three dimensional spectral code for the velocity and passive scalar are presented and used to calculate the higher order statistics which describe intermittency. Decaying turbulence at very low Reynolds numbers is investigated. The rapid decay rates observed are determined to be due to the absence of an inertial range at low Reynolds numbers. The way a coherent, anisotropic scalar field returns to isotropy is analyzed. Dissert. Abstr.

N82-11387 California Univ., Los Angeles.
THREE-DIMENSIONAL LEE WAVES IN A CONTINUOUSLY STRATIFIED FLUID Ph.D. Thesis
Robert Dale Sherman 1981 172 p
Avail: Univ. Microfilms Order No. 8121054

A stably stratified fluid flowing over an isolated obstacle produces waves in the lee which have many of the characteristics of ship waves in water of finite depth. Use of a model in which the mean wind increases exponentially with height minimizes the considerable mathematical difficulties involved and allows for approximate analytic solutions for the far field three dimensional trapped lee wave pattern. It is shown that the character of the wave pattern depends on the surface Richardson number. A large number of modes is excited in every case and the analysis breaks down for the higher modes. To determine wave amplitudes then, recourse had to be made to numerical simulations using a transient gravity wave model. Several simulations were carried out for different values of the Richardson number and the results support the analysis. Dissert. Abstr.

N82-11388 California Univ., Los Angeles.
SHEAR FLOW INSTABILITIES IN A ROTATING SYSTEM Ph.D. Thesis
Wei-Lee Chen 1981 176 p
Avail: Univ. Microfilms Order No. 8120930

Instabilities of viscous shear flows in a fluid layer rotating about a vertical axis were investigated. Two basic states were considered: (1) a baroclinic linear shear flow, which is associated with an imposed horizontal temperature gradient, and (2) double Ekman layers, which are produced by the relative motion of the two horizontal boundaries. Two instability mechanisms are present in this system, the inflection point mode and the symmetric mode. The linear theory of these instabilities is considered in the case baroclinic flow and Ekman layer flow. A Runge-Kutta shooting method was used in the numerical analysis. In special cases the nonlinear properties of the instabilites were studied. Finite amplitude disturbances in the form of rolls were investigated using the Galerkin technique. It was found that the existence of multiple solutions is a common feature. Moreover, finite amplitude disturbances can exist at Reynolds numbers lower than that predicted by the linear analysis. To test whether the finite amplitude rolls are realized, a stability analysis of the combined circulation was also performed. Dissert. Abstr.

SOME PROBLEMS IN THE CALCULATION OF FLOWS WITH TANGENTIAL DISCONTINUITIES
V. F. Molchanov Nov. 1980 17 p refs Transl. into ENGLISH from Uch. Zap. TsAGI (USSR), v. 6, no. 4, 1975 p 1-11
(RAE-LIB-Trans-2059; BR77975) Copyright. Avail: Issuing Activity

A scheme of a method of discrete vortices, applicable in calculations of plane flows with tangential discontinuities was investigated. It is shown that the dispersion of vortices usually found in calculations is the effect of the incorrect nature of the problem on the multitude of growing perturbations, and of the instability of the difference scheme on the multitude of decreasing perturbations. On the basis of the application of the theory of the solution of incorrectly set problems and of the theory of difference schemes, a method is developed which potentially offers the possibility of carrying out calculations with a given degree of accuracy. Results are illustrated taking the case, by way of example, of the calculation of the nonlinear characteristics of a rectangular wing of small aspect ratio. Author

AMPLIFIED CROSSFLOW DISTURBANCES IN THE LAMINAR BOUNDARY LAYER ON SWEPT WINGS WITH SUCTION
J. Ray Dagenhart Nov. 1981 90 p refs
(NASA-TP-1902; L-14423) Avail: NTIS HC A05/MF A01 CSCL 20D

Solution charts of the Orr-Sommerfeld equation for stationary crossflow disturbances are presented for 10 typical velocity profiles on a swept laminar flow control wing. The critical crossflow Reynolds number is shown to be a function of a boundary layer shape factor. Amplification rates for crosslow disturbaces are shown to be proportional to the maximum crossflow velocity. A computer stability program called MARIA, employing the amplification rate data for the 10 crossflow velocity profiles, is constructed. This code is shown to adequately approximate more involved computer stability codes using less than two percent as much computer time while retaining the essential physical disturbance growth model. A THREE-DIMENSIONAL SIMULATION OF TRANSITION AND EARLY TURBULENCE IN A TIME-DEVELOPING MIXING LAYER
A. B. Cain, W. C. Reynolds, and J. H. Ferziger Aug. 1981 140 p refs
(Contract NCC2-15)
(NASA-CR-164942; SU-TF-14) Avail: NTIS HC A07/MF A01 CSCL 20D

The physics of the transition and early turbulence regimes in the time developing mixing layer was investigated. The sensitivity of the mixing layer to the disturbance field of the initial condition is considered. The growth of the momentum thickness, the mean velocity profile, the turbulence kinetic energy, the Reynolds stresses, the anistropy tensor, and particle track pictures of computations are all examined in an effort to better understand the physics of these regimes. The amplitude, spectrum shape, and random phases of the initial disturbance field were varied. A scheme of generating discrete orthogonal function expansions on some nonuniform grids was developed. All cases address the early or near field of the mixing layer. The most significant result shows that the secondary instability of the mixing layer is produced by spanwise variations in the straining field of the primary vortex structures. J.D.H.

MIXING OF A PASSIVE SCALAR IN ISOTROPIC AND SHEARED HOMOGENEOUS TURBULENCE
E. Shirani, J. H. Ferziger, and W. C. Reynolds May 1981 175 p refs
(Contract NCC2-15; Grant NSF ENG-78-17619)
(NASA-CR-164938; SU-TF-15) Avail: NTIS HC A08/MF A01 CSCL 20D

In order to calculate the velocity and scalar fields, the three dimensional, time-dependent equations of motion and the diffusion equation were solved numerically. The following cases were treated: isotropic, homogeneous turbulence with decay of a passive scalar; and homogeneous turbulent shear flow with a passive scalar whose mean varies linearly in the spanwise direction. The solutions were obtained at relatively low Reynolds numbers so that all of the turbulent scales could be resolved without modeling. Turbulent statistics such as integral length scales, Taylor microscales, Kolmogorov length scale, one- and two-point correlations of velocity-velocity and velocity-scalar, turbulent Prandtl/Schmidt number, r.m.s. values of velocities, the scalar quantity and pressure, skewness, decay rates, and decay exponents were calculated. The results are compared with the available expermental results, and good agreement is obtained. T.M.

HIGHER-LEVEL SIMULATIONS OF TURBULENT FLOWS
J. H. Ferziger Mar. 1981 152 p refs
(Grant NGR-2-15; Contract NCC2-15; Grant NSF ENG-78-17619)
(NASA-CR-164936; SU-TF-16) Avail: NTIS HC A08/MF A01 CSCL 20D

The fundamentals of large eddy simulation are considered and the approaches to it are compared. Subgrid scale models and the development of models for the Reynolds-averaged equations are discussed as well as the use of full simulation in testing these models. Numerical methods used in simulating large eddies, the simulation of homogeneous flows, and results from full and large scale eddy simulations of such flows are examined. Free shear flows are considered with emphasis on the mixing layer and wake simulation. Wall-bounded flow (channel flow) and recent work on the boundary layer are also discussed. Applications of large eddy simulation and full simulation in meteorological and environmental contexts are included along with a look at the direction in which work is proceeding and what can be expected from higher-level simulation in the future. A.R.H.

NUMERICAL SIMULATION OF A COMPRESSIBLE HOMOGENEOUS, TURBULENT SHEAR FLOW Ph.D. Thesis
W. J. Feiereisen, W. C. Reynolds, and J. H. Ferziger Mar. 1981 195 p refs
(Contract NCC2-15)
(NASA-CR-164953; SU-TF-13) Avail: NTIS HC A09/MF A01 CSCL 20D

A direct, low Reynolds number, numerical simulation was performed on a homogeneous turbulent shear flow. The full compressible Navier-Stokes equations were used in a simulation on the ILLIAC IV computer with a 64,000 mesh. The flow fields generated by the code are used as an experimental data base, to examine the behavior of the Reynols stresses in this simple, compressible flow. The variation of the structure of the stresses and their dynamic equations as the character of the flow changed is emphasized. The structure of the tress tensor is more heavily dependent on the shear number and less on the fluctuating Mach number. The pressure-strain correlation tensor in the dynamic uations is directly calculated in this simulation. These correlations are decomposed into several parts, as contrasted with the traditional incompressible decomposition into two parts. The performance of existing models for the conventional terms is examined, and a model is proposed for the 'mean fluctuating' part. S.L.

LEWIS RESEARCH CENTER'S COAL-FIRED, PRESSURIZED, FLUIDIZED-BED REACTOR TEST FACILITY
John A. Kobak and R. James Rollbuhler Oct. 1981 35 p refs
(NASA-TM-81616; E-621) Avail: NTIS HC A03/MF A01 CSCL 20D

A 200-kilowatt-thermal, pressurized, fluidized-bed (PFB) reactor, research test facility was designed, constructed, and operated as part of a NASA-funded project to assess and evaluate the effect of PFB hot-gas effluent on aircraft turbine engine materials that might have applications in stationary-power-plant turbogenerators. Some of the techniques and components developed for this PFB system are described. One of the more important items was the development of a two-in-one, gas-solids separator that removed 95+ percent of the solids in 1600 F to 1900 F gases. Another was a coal and sorbent feed and mixing system for injecting the fuel into the pressurized combustor. Also important were the controls and data-acquisition systems that enabled one person to operate the entire facility. The solid, liquid, and gas sub-systems all had problems that were solved over the 2-year operating time of the facility, which culminated in a 400-hour, hot-gas, turbine test. A.R.H.

HIGH THERMAL POWER DENSITY HEAT TRANSFER Patent Application
James F. Morris, inventor (to NASA) Filed 30 Oct. 1980 10 p
(NASA-Case-LEW-12950-1; US-Patent-Appl-SN-202228) Avail: NTIS HC A02/MF A01 CSCL 20D

Heat from a high temperature heat pipe is transferred through a vacuum or a gap filled with electrically nonconducting gas to a cooler heat pipe. The heat pipe is used to cool the nuclear reactor while the heat pipe is connected thermally and electrically to a thermionic converter. If the receiver requires greater thermal power density, geometries are used with larger heat pipe areas for transmitting and receiving energy than the area for conducting the heat to the thermionic converter. In this way the heat pipe capability for increasing thermal power densities compensates for the comparatively low thermal power densities through the electrically non-conducting gap between the two heat pipes. CRITICAL WAVE CONDITIONS FOR SAND MOTION INITIATION
Robert J. Hallermeier Jul. 1981 18 p refs
(AD-A104376; CERC-CETA-81-10) Avail: NTIS HC A02/MF A01 CSCL 08/1

Sand and fluid characteristics together with the period of oscillatory flow determine the peak fluid velocity needed for sand motion initiation. With linear wave theory, this threshold peak near-bottom velocity can be used to calculate critical wave conditions for sand motion - either the minimum wave height in a given water depth, or the maximum water depth with a given wave height, for a given wave period. The procedure presented here permits prediction of the seaward extent of bed activity due to wave action in field and laboratory situations. Example calculations are provided. Author (GRA)

INVESTIGATION OF HEAT TRANSFER IN STRAIGHT AND CURVED RECTANGULAR DUCTS FOR LAMINAR AND TRANSITION FLOWS M.S. Thesis
Robert George Holihan, Jr. Jun. 1981 81 p refs
(AD-A104604) Avail: NTIS HC A05/MF A01 CSCL 20/13

An experimental investigation was conducted to examine convection heat transfer in a duct of rectangular cross-section, having both a straight and curved flow passage. One wall was kept at a constant temperature, with the opposite wall being adiabatic. Heating of the air flowing in the channel was accomplished through Joulean heating of a wall composed of Temsheet. The experiments were conducted for steady state in laminar and transition flows. Development and propagation of the Taylor-Gortler vortices was shown to enhance the heat transfer rate in the curved section as compared to the straight section. Author (GRA)

CORRECTING FOR THE SIDEWALL BOUNDARY LAYER IN SUBSONIC TWO-DIMENSIONAL AIRFOIL/HYDROFOIL TESTING

A. L. Treaster, P. P. Jacobs, and G. B. Gurney 25 Aug. 1981 40 p refs Proposed for presentation at the AIAA 12th Aerodyn. Testing Conf., Williamsburg, Va., Mar. 1982
(Contract N00024-79-C-6043)
(AD-A104562; ARL/PSU-TM-81-176) Avail: NTIS HC A03/MF A01 CSCL 20/4

Historically, two dimensional airfoil or hydrofoil section characteristics have been obtained by measuring individually the lift, drag and pitching moment by the most accurate technique available. The use of force balances to measure the three quantities simultaneously has met with only partial success. Although the lift and pitching moment data have usually been acceptable, the drag data have varied by as much as an order of magnitude from the accepted NACA reference data. To investigate the parameters which influence two dimensional force measurement and force balance design, an experimental program was conducted in the subsonic wind tunnel of the Applied Research Laboratory at the Pennsylvania State University (ARL/PSU). From the results of this test program the sidewall boundary layer was identified as the primary factor contributing to the erroneous drag measurements. A correction procedure which is based on the airfoil/hydrofoil geometry, the flow environment and the measured data was developed. Corrected data from the subject test program and from similar programs in other experimental facilities for both symmetrical and cambered sections are in good agreement with NACA data in all cases.

DEVELOPMENT OF PREDICTION METHOD FOR TRANSONIC SHOCK INDUCED SEPARATED FLOW Final Report, May 1980 - Mar. 1981

J. E. Carter Sep. 1981 38 p refs
(Contract N00014-80-C-0424)
(AD-A104566; UTRC/R80-915213-4) Avail: NTIS HC A03/MF A01 CSCL 20/4

In the present study it has been demonstrated that a finite difference technique for viscous-inviscid interaction, previously developed and demonstrated by the author for subsonic turbulent separated flows, is applicable to the problem of transonic shock induced separated flow. Converged solutions have been obtained and favorable comparisons with experimental data show that this method is capable of resolving the detailed features of this strongly interacting flow. These interaction calculations are aided by the use of a new shear layer coordinate system which is aligned with an estimated position of the shear layer in the large separated region. Author (GRA)

TWO-PHASE FLOW IN GEOTHERMAL ENERGY SOURCES Final Technical Report

Jul. 1981 240 p refs Prepared jointly with Coury and Associates, Lakewood, Colo. and Houston Univ.
(Contract De-AC02-76ET-28359)
(DE81-029037; DOE/ET-28359/T1) Avail: NTIS Hc A11/MF A01

A geothermal well consisting of single and two-phase flow sections was modeled in order to explore the variables important to the process. For this purpose a computer program was developed in a versatile form in order to be able to incorporate a variety of two phase flow void fraction and friction correlations. A parameteric study indicated that the most significant variables controlling the production rate are hydrostatic pressure drop or void fraction in the two-phase mixture and heat transfer from the wellbore to the surrounding earth. Downhole instrumentation was developed and applied in two flowing wells to provide experimental data for the computer program. The wells (East Mesa 8-1, and a private well) behaved differently. Well 8-1 did not flash and numerous shakedown problems in the probe were encountered. The private well did flash and the instrumentation detected the onset of flashing. A Users Manual was developed and presented in a workshop held in conjunction with the Geothermal Resources Council. DOE

CYCLE AND PERFORMANCE ANALYSIS OF ABSORPTION HEAT PUMPS FOR WASTE HEAT UTILIZATION

Horacio Perez-Blanco and Gershon Grossman Sep. 1981 56 p refs
(Contract W-7405-eng-26)
(DE81-030705; ORNL/TM-7852) Avail: NTIS HC A04/MF A01

A heat pump was designed to upgrade low-temperature waste heat by boosting its temperature typically from 600 C (1400 F) to 1200 C (2500 F). The system uses part of the low-temperature heat as its energy source and does not need outside power, except for running small auxiliary equipment. The heat pump employs a desorber/evaporator combination in which some hot water from the heat source is evaporated and the vapor is absorbed in a concentrated absorbent solution. The heat of absorption serves to raise the temperature of the rest of the hot water stream. Two stages of the system are used in series to provide the desired temperature boost. Both are served by one desorber which uses part of the waste heat to concentrate the solution. Both open- and closed-cycle regeneration of the solution was studied. The operation of the system is described and its performance criteria defined. Results of a computer study show the variation in performance with different design variables. Two working materials, LiBr-water and LiCl-water, are considered.

MAGMA COOLING-TOWER PROCESS PILOT-PLANT DEMONSTRATION Final Report

W. G. Sanderson May 1981 159 p Sponsored by EPRI Prepared for Nevada Power Co., Las Vegas
(DE81-903783; EPRI-CS-1838; EPRI-TPS-79-740) Avail: NTIS HC A08/MF A01

A binary cooling process involves vertically oriented water-water-air falling film heat exchangers which are configured for indirect cooling of a primary fluid through evaporation of a secondary fluid into an air stream. The secondary fluid is contained in a circulating loop within the magma cooling tower (MCT) and is composed of treated plant waste water. The secondary fluid is exposed primarily to low temperature non-metallic surfaces and can be maintained at very high dissolved solids levels. The capability of the MCT to evaporate and concentrate waste water blowdown using low quality waste energy from the cooling water loop was evaluated as well as the control of scaling, fouling and corrosion in the high solids brine environment of the MCT secondary loop. Two modes of scale control were tested. Results were within the limits predicted prior to the test. DOE

PARAMETRIC SENSITIVITY STUDY FOR SOLAR-ASSISTED HEAT-PUMP SYSTEMS Final Report

N. M. White and J. H. Morehouse Jul. 1981 110 p refs Prepared for Midwest Research Inst., Golden, Colo.
(Contracts DE-AC02-77CH-0017; EG-77-C-01-4042)
(DE81-030309; SERI/TR-98288-1) Avail: NTIS HC A06/MF A01

The engineering and economic parameters affecting life-cycle costs for solar-assisted heat pump systems are investigted. The change in energy usage resulting from each engineering parameter varied was developed from computer simulations, and is compared with results from a stand-alone heat pump system. Three geographical locations are considered: Washington, DC, Fort Worth, TX, and Madison, WI. Results indicate that most engineering changes to the systems studied do not provide significant energy savings. The most promising parameters to ary are the solar collector parameters tau (-) and U/sub L/ the heat pump capacity at design point, and the minimum utilizable evaporator temperature. Costs associated with each change are estimated, and life-cycle costs computed for both engineering parameters and economic variations in interest rate, discount rate, tax credits, fuel unit costs and fuel inflation rates. Results indicate that none of the feasibile engineering changes for the system configuration studied will make these systems economically competitive with the stand-alone heat pump without a considerable tax credit. DOE

DIFFUSIVITY OF PARTICLES MOVING RAPIDLY THROUGH A TURBULENT FLUID

L. G. Margolin Aug. 1981 10 p refs
(Contract W-7405-eng-36)
(DE81-030414; LA-8875) Avail: NTIS HC A02/MF A01

The theoretical assumptions concerning the diffusion of small particles in a turbulent fluid are contrasted with experimental observations. Theoretical studies predict that particles will diffuse like passive scalars. Experimental measurements of the diffusion of small beads in turbulent air yield particle diffusivities much smaller than passive scalar diffusivity. One assumption, usually called the neighborhood hypothesis, is not justifiable when the particles have a large mean velocity relative to the fluid. A model, valid in these circumstances, and in good agreement with the experiment is constructed. DOE

DESIGN, OPERATION AND PERFORMANCE OF A GROUND COUPLED HEAT PUMP SYSTEM IN A COLD CLIMATE

P. D. Metz 1981 8 p refs Presented at the 16th Intersoc. Energy Conversion Eng. Conf., Atlanta, 9-14 Aug. 1981; sponsored by ASME
(Contract DE-AC02-76CH-00016)
(DE81-024257; BNL-29625; CONF-810812-25) Avail: NTIS HC A02/MF A01

An antifreeze filled serpentine earth coil was designed to just meet heating needs of a small, well insulated house with an average brine temperature never less than 7 C (20 F). The 155 m (507 ft) long, 1.2 m (4 ft) coil made from nominal size 1-1/2 in medium density polyethylene pipe was installed by a local plumbing contractor using two different chain driven trenchers. A commercially available water to air heat pump was used with minor modifications. System performance was monitored using kilowat hour meters, a Btu meter, and a datalogger microcomputer data acquisition system. The house temperature was kept between 21 and 23 C (70 and 74 F) all winter despite outdoor temperature as low as 24 C (-11 F). During a period when the outdoor temperature averaged -2 C (28 F), the system extracted approximately 10.2 x 10 to the 9th power 3 (9.7 x 10 to the 6th power Btu) from the ground with an almost constant heat pump COP (coefficient of performance) averaging about 2.3 and a system COP of 2.2. No resistance heating was used. DOE

CHEMICAL HEAT PUMP PROGRAM: AN OVERVIEW

Alessio Mezzina 1981 5 p Presented at the Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981
(Contract DE-AC02-76CH-00016)
(DE81-025086; BNL-29592; CONF-810672-22) Avail: NTIS HC A02/MF A01

Chemical heat pumps comprise reversible reactions which can be driven by low grade heat. Thermal energy is absorbed in one direction and liberated in the reverse direction; thus, serving as a basis for system designs applicable to space conditioning or process heat management and offering the capability for high density energy storage as an integral part of the system. The program background, rationale, technology, and research and development needs are described. DOE

N82-11415# Oak Ridge National Lab., Tenn.

COMPUTER-AIDED HEAT-PUMP DESIGN AND OPTIMIZATION

S. K. Fischer and C. K. Rice 1981 4 p refs Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2 Jun. 1981
(Contract W-7405-eng-26)
(DE81-024965; CONF-810672-1) Avail: NTIS HC A02/MF A01

Analytical methods to predict the performance of existing and proposed heat pumps and computer programs to serve as tools for the design and optimization of high efficiency heat pumps are described. A computer model of electric-motor-driven heat pumps was developed to provide detailed analyses of the performance of existing or proposed heat pumps. To the extent possible, the model is based on the physical principles underlying the processes and on basic correlations, with minimal use of empirical correlations. The computer program is oganized to facilitate its use by engineers who want to concentrate on a heat pump design, not a computer program. The heat pump model was connected to an optimization program. The heat pump design, not a computer program. The heat pump model was connected to an optimization program in order to maximize the predicted heating efficiency by simultaneously varying ten design parameters to find the combination giving the highest COP at a specified heating capacity. DOE

N82-11416# Oak Ridge National Lab., Tenn. Energy Div.

LABORATORY DETERMINATION OF FROSTING AND DEFROSTING LOSSES FOR A HIGH EFFICIENCY AIR-SOURCE HEAT PUMP

W. A. Miller and R. D. Ellison 1981 4 p refs Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981
(Contract W-7405-eng-26)
(DE81-023218; CONF-810672-2) Avail: NTIS HC A02/MF A01

Tests to detail system and component performance data, to quantify the dynamic losses, and to seek and evaluate methods for reducing these losses were performed. A high efficiency split-system heat pump was installed in two separate air loops, with one loop housng the indoor and the other housing the outdoor unit. Calculations of the heat pump's performance based on air-side measurements were within 3% of that based on refrigerant side measurements. Performance of the heat pump was measured under steady-state, dehumidification, and frosting-defrosting conditions with major emphasis placed on the dynamic frosting operation of the system. The system and component performance was evaluated for ambient temperature levels of 8.3, 4.4, 1.7, -1.1 and -8.3 C, and for discrete humidity levels ranging from 50 to 90%. DOE

N82-11417# Oak Ridge National Lab., Tenn. Energy Div.

ALTERNATIVE HEAT PUMP CYCLE STUDIES

F. A. Creswick 1981 4 p refs Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981
(Contract W-7405-eng-26)
(DE81-024983; CONF-810672-3) Avail: NTIS HC A02/MF A01

Alternative heat pump cycles for space conditioning applications that offer improved performance or the option to use a non-chlorofluorocarbon working fluid are considered. Various air-cycle systems, the Stirling cycle, and an ejector cycle were examined. The concept is discussed. Results of preliminary studies on the air cycles and the Stirling heat pump are discussed briefly. Ejector heat pump studies are at a very preliminary stage and no conclusions have been made. DOE

INVESTIGATION OF DIRECT EXPANSION IN GROUND SOURCE HEAT PUMPS

Mark D. Kalman 1981 6 p refs Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-024139; CONF-810672-5) Avail: NTIS HC A02/MF A01

A fully instrumented subscale ground coupled heat pump system was developed, and built, and used to test and obtain data on three different earth heat exchanger configurations under heating conditions (ground cooling). Various refrigerant flow control and compressor protection devices were tested for their applicability to the direct expansion system. Undistributed Earth temperature data were acquired at various depths. The problem of oil return at low evaporator temperatures and low refrigerant velocities was addressed. An analysis was performed to theoretically determine what evaporator temperature can be expected with an isolated ground pipe configuration with given length, pipe size, soil conditions and constant heat load. Technical accomplishments to data are summarized. DOE

ASSESSMENT OF I.C. ENGINES AS DRIVERS FOR HEAT ACTUATED HEAT PUMPS

J. C. Burke, W. P. Teagan, and P. G. Goff 1981 6 p Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981 Prepared for ORNL
(Contract W-7405-eng-26)
(DE81-024086; CONF-810672-11) Avail: NTIS HC A02/MF A01

The present suitability and future potential of gas-fired and oil-fired internal combustion (IC) engines for use in heat-actuated heat pumps for space conditioning applications are assessed. Drives for residential and light commercial machines up to 100 KW output or approximately 50 HP engine input are considered. A conceptual design identifying major generic elements was prepared to serve as a basis for estimating performance maintenance costs. A review of prior experiences with IC engines with heat pumps used in similar situations was conducted. Capital costs and maintenance costs were estimated and diesel and spark ignition engine efficiencies were determined. Institutional and operational considerations were identified. DOE

HEAT PUMP R AND D AT OAK RIDGE NATIONAL LABORATORY

R. D. Ellison and F. A. Creswick 1981 4 p refs Presented at DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981
(Contract W-7405-eng-26)
(DE81-024121; CONF-810672-13) Avail: NTIS HC A02/MF A01

Heat pump system and component performance evaluations at steady state and under frosting conditions are described. A computer model of electric motor driven heat pumps was developed to explore the practical limits of steady-state heating efficiency of conventional air-source heat pumps, and to demonstrate an approach to computer-aided heat pump design techniques. Scoping calculations of alternative heat pump systems, such as aircycle heat pumps and electric motor driven Stirling heat pumps are presented. Computer programs were written to model the expected performance of vertical-pipe ground-coupled heat exchangers, and for the detailed performance analysis of air-to-refrigerant heat exchangers with complex refrigerant circuiting by calculating the performance of each tube of the heat exchanger individually. Seasonal performance factors for air-source heat pumps using hour-by-hour calculations with empirical temperature dependent degradation factors were estimated. DOE

DIAPHRAGM STIRLING ENGINE HEAT-ACTUATED HEAT PUMP DEVELOPMENT

Robert A. Ackermann and Paul Swenson (Consolidated Natural Gas Research Co.) 1981 5 p Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-024076; CONF-810672-14) Avail: NTIS HC A02/MF A01

A power module, consisting of a free displacer, resonant Stirling engine, hydraulic transmission, and resonant Rankine refrigerant (F-22) compressor, embodies several innovative concepts in free-piston Stirling engine heat pump design that will advance the state of the art of this technology. Progress is reported in three areas of the program. A compressor/engine matching analysis and a stability analysis show that the power module, which is representative of a two-degree-of-freedom resonant system, can operate stably over the full range of heat pump conditions. A compressor design evolved that has met criteria for performance and cost. Tests employing a hydraulic simulator test rig show that the transmission losses are less than had been predicted, and that properly designed and fabricated diaphragms can attain long life. DOE

STUDIES OF HEAT TRANSFER AND WATER MIGRATION IN SOILS Final Report, 1 May 1979 - 30 Sep. 1980

W. R. Walker, James D. Sabey, and Diane R. Hampton Apr. 1981 140 p refs
(Contract DE-AC02-79CS-30139)
(DE81-023951; DOE/CS-30139/T1) Avail: NTIS HC A07/MF A01

Simultaneous transfer of heat and water through partially saturated soils was described by both theoretical analyses and laboratory measurements. The theoretical efforts produced computer coded simulation models of coupled water and heat flux in soils and thermal conductivity as a function of water content, bulk density, mineralogical composition, and temperature. The laboratory data were used to calibrate and verify the simulation models. A prototype thermal storage reservoir using in-situ soil materials was constructed and evaluated. The feasibility of trans-seasonal heat storage was demonstrated. Efficient use of in-situ soil materials as a heat storage system requies that wet soil be used to store the heat while surrounding soils be as dry as possible. To accomplish this separation, various impermeable barriers were studied. DOE

PERFORMANCE PREDICTIONS AND MEASUREMENTS FOR SPACE-POWER-SYSTEM HEAT PIPES

F. Coyne Prenger, Jr. 1981 16 p refs Presented at the 4th Intern. Heat Pipe Conf., London, 7-10 Sep. 1981
(Contract W-7405-eng-36)
(LA-UR-81-909; CONF-810902-1) Avail: NTIS HC A02/MF A01

High temperature liquid metal heat pipes designed for space power systems were analyzed and tested. Three wick designs are discussed and a design rationale for the heat pipe is provided. Test results on a molybdenum, annular wick heat pipe are presented. Performance limitations due to boiling and capillary limits are presented. There is evidence that the vapor flow in the adiabatic section is turbulent and that the transition Reynolds number is 4000. DOE

PERFORMANCE LIMITS OF GRAVITY-ASSIST HEAT PIPES WITH SIMPLE WICK STRUCTURES

F. Coyne Prenger, Jr. and J. E. Kemme 1981 10 p refs Presented at 4th Intern. Heat Pipe Conf., London, 7 Sep. 1981
(Contract W-7405-eng-36)
(LA-UR-81-969; CONF-810902-3) Avail: NTIS HC A02/MF A01

The use of gravity-assist heat pipes with simple wick structures to establish performance limits due to entrainment of the liquid by the counterflowing vapor was investigated. A physical model is postulated which leads to a single correlation predicting entrainment limits for all data investigated. The characteristic length in the entrainment parameter is the depth of the wick structure and the model infers an upper bound on this parameter. DOE

N82-11428# Los Alamos Scientific Lab., N. Mex.

HEAT-PIPE DEVELOPMENT FOR HIGH-TEMPERATURE RECUPERATOR APPLICATION

M. Merrigan, W. Dunwoody, and L. Lundberg 1981 14 p refs Presented at Heat Pipe Conf., London, 7 Sep. 1981 Submitted for publication
(Contract W-7405-eng-36)
(LA-UR-81-1414; CONF-810902-4) Avail: NTIS HC A02/MF A01

The development of heat pipes for operation in oxidizing atmospheres at temperatures above 1100 K is described. The heat pipes comprise a metallic liner and wick stucture with a protective outer shell of an oxidation resistant material. The working fluids used in the heat pipes are alkali metals. A number of configurations were evaluated, ranging from pipes using a metallic inner liner of a chemically vapor deposited (CVD) refractory metal applied to ceramic tubing, to one utilizing ferrous materials with an outer layer of a developed oxide. A promising intermediate configuration consisting of free-standing refractory tubing covered with a layered structure of fine grain, equi-axed CVD silicon carbide was evaluated. The test heat pipe was fabricated using low-carbon, arccast molybdenum tubing and a wick composed of 150 mesh molybdenum screen. After coating, the pipe was operated in air and in combustion gases for performance evaluation. The use of iron-chromium-aluminum alloys as container materials for operating in high temperature oxidizing and sulfiding gas streams was investigated. DOE

LIQUID-PARTICLE DYNAMICS AND RATE OF EVAPORATION IN THE ROTATING FIELD OF CENTRIFUGAL COMPRESSORS

Oscar Pinkus 1981 42 p refs Presented at the Symp. on Energy and Environment, Turbomachinery Technol., Patras, Greece, 22-26 Jun. 1981 Prepared in cooperation with Oak Ridge National Lab.
(Contract W-7405-eng-26)
(DE81-024075; CONF-8106101-1) Avail: NTIS HC A03/MF A01

A model is presented which consists of injecting a liquid coolant into the vapor of centrifugal compressors via slots in the rotating blades in order to achieve isothermal compression and thus minimal work input. The 3-dimensional analysis determines the relative velocities and trajectories of the liquid particles, and their rate of vaporization as a function of the prevailing flow field and inlet conditions. Inertia, viscous drag, centrifugal and Coriolis forces are all included. The computer-obtained results show that for optimum conditions and to avoid collision with the blades, it is desirable that injection occur at the suction side of the blades and close to the hub; that low rather than high initial particle velocities are preferred; and that small droplet sizes are required both to avoid blade erosion and to assure the highest rate of vaporization. The analysis also shows that vaporization levels will remain low unless the compressed vapor is at relatively high temperatures. DOE

THE PIEZOMAGNETIC EFFECT: LIMITS ON DETECTABILITY USING A COMBINED VECTOR AND SCALAR MAGNETOMETER ARRAY Ph.D. Thesis
Craig Allen Searls 1981 309 p
Avail: Univ. Microfilms Order No. 8121053

The combined data from two types of magnetic observatories were used to determine the operational characteristics of the magnetometers in the remote observatory environment. The initial run of the magnetometers demonstrated that in addition to the normal magnetic variation associated with the disturbance of the magnetosphere there is also a component of the magnetic records associated with oceanic tides. Other factors contribution to the residual variation in the magnetic difference fields are local differnces in susceptibility, conductivity, and magnetic field orientation. These effects can be removed by linear prediction filtering techniques with vector field information as the input. The primary conclusion was that the instrumental noise level for both the proton precession and the vector fluxgate magnetometers are needed. Dissert. Abstr.

METHOD FOR RETARDING DYE FADING DURING ARCHIVAL STORAGE OF DEVELOPED COLOR PHOTOGRAPHIC FILM Patent
Richard B. Hoover and Charles M. Rhodes, inventors (to NASA) Issued 1 Sep. 1981 4 p Filed 7 Feb. 1980 Supersedes N80-18362 (18 - 09, 1139)
(NASA-Case-MFS-23250-1; US-Patent-4,287,152;
US-Patent-Appl-SN-119340; US-Patent-Class-422-40;
US-Patent-Class-430-17; US-Patent-Class-430-372) Avail: US Patent and Trademark Office CSCL 14E

Dye fading during archival storage of developed color photographic film is retarded by placing the film in a sealed, opaque vault, introducing a dry, pressurized inert gas into the vault while the latter is vented, and sealing the vault after the air within the vault has been purged and replaced by the inert gas. Preferably, the gas is nitrogen; and the vault is stored at a temperature below room temperature to preserve the color photographic emulsions on the film contained within the vault. For short-term storage, sodium thiocyanate pads charged with water are placed within the vault. For long term storage, the interior of the vault is kept at a low relative humidity.

DYNAMIC MOIRE METHODS FOR DETECTION OF LOOSENED SPACE SHUTTLE TILES
W. L. Snow, A. W. Burner, and W. K. Goad Sep. 1981 17 p refs
(NASA-TM-83205) Avail: NTIS HC A02/MF A01 CSCL 14B

Moire fringe methods for detecting loose space shuttle tiles were investigated with a test panel consisting of a loose tile surrounded by four securely bonded tiles. The test panel was excited from 20 to 150 Hz with in-plane sinusoidal acceleration of 2 g (peak). If the shuttle orbiter can be subjected to periodic excitation of 1 to 2 g (peak) and rigid-body periodic displacements do not mask the change in the Moire pattern due to tile

looseness, then the use of projected Moire fringes to detect out-of-plane rockin appears to be the most viable indicator of tile looseness since no modifications to the tiles are required.

DIRECTIONAL FLOW SENSOR Patent Application
James M. Black, inventor (to NASA) Filed 7 Sep. 1981 13 p
(Contract NAS7-100)
(NASA-Case-FRC-11074-1; US-Patent-Appl-SN-291644) Avail: NTIS HC A02/MF A01 CSCL 14B

A bidirectional flow sensor comprises at least three axially aligned thermistors, each of which is connected in a normally balanced bridge circuit. The centermost thermistor serves as a heat source for fluid within a tubular body while thermal energy reversely is transferred between the outermost thermistors. Each bridge circuit includes an operational amplifier of a substantially common design with its reversing input connected to the first leg of the bridge circuit and its nonreversing input connected to the second leg. The first leg is characterized by series connected resistances and the thermistor of the roup for establishing a fixed voltage output ratio for the second leg. The output of voltage for the amplifier of each bridge circuit is indicative of the current required to maintain that temperature of the thermistor which is suitable for maintaining a constant voltage output ratio for the second leg of the bridge circuit. The output voltages of the pair of bridge circuits are applied to the inputs of another operational amplifier and provide for an output indicative of flow rate and direction for the fluid.

A GROUND-MOTION DISPLACEMENT GAUGE Topical Report, 5 Jan. - 1 Aug. 1980
Jack E. Whitener 1 Aug. 1980 52 p refs
(Contract DNA001-80-C-0069)
(AD-A104325; RDA-TR-113204-004; DNA-5574T) Avail: NTIS HC A04/MF A01 CSCL 14/2

This report describes a ground-motion displacement gauge and its applications. The gauge concept is based upon the free-fall time of a mass released inside a gauge cannister prior to the onset of ground motion. The time-of-fall of the mass to the cannister bottom during ground displacement, together with the free-fall time for the gauge at rest, uniquely determines the vertical displacement at one time. Simulation of ground displacement by gauge drop tests demonstrated the operating principle.

TRANSIENT TEMPERATURE RESPONSE OF STRAIN GAGES
P. H. Adams Aug. 1981 17 p refs
(Contract DE-AC04-76DP-00789)
(DE81-031922; SAND-80-2689) Avail: NTIS HC A02/MF A01

The use of electrical resistance strain gages for the measurements of strain under transient temperature conditions presents the problem of determining the thermal output or apparent strain of the strain gage with sufficient accuracy to achieve satisfactory results. Various circuit temperature compensation techniques have been used by other investigators in the past, but little data are available relative to the accuracy of those techniques under transient temperature conditions. In particular, published data has been limited to temperature changes not exceeding 300 F per second. thermal response of one model of a high temperature weldable strain gage was determined for a temperature rise rate of 1000 F per second.

LASER TRIGGERED SPARK GAPS UNDER EXPERIMENTAL STUDY
Meng Shaoxian, Pu Chaoshun, Yang Yi, Sun Naigeng, and Xie Ziming *In its* China Rept.: Sci. and Technol., No. 125 (JPRS-78932) 9 Sep. 1981 p 38-44 refs Transl. into ENGLISH from Jiguang (China), v. 8, no. 4, Apr. 1981 p 46-47 (For primary document see N82-11446 02-36)
Avail: NTIS

Laser triggered spark gaps are an important component for the selection of singular ultrashort pulses from the locked mode pulsed laser and for shearing of lasar waveforms by the photoelectric switch. The copper sphere gap was examined. It consists of two copper sphers. The multiple voltage rectified high voltage is passed through a 75 ohm electrical cable which is connected to the spheres. When the locked mode laser passes through the short focal distance lens and focuses on the gap between the copper spheres, an air puncture is formed producing initial electrons and ions. These electrons and ions move towards the two electrodes under the effects of the electrical field of the gap between the spheres, thus forming a puncture in the gap between the spheres. The discharge waveform in the gap between the spheres was measured. T.M.

InGaAsP/InP LASER DEVELOPMENT FOR SINGLE-MODE, HIGH-DATA-RATE COMMUNICATIONS Interim Report, 1 Jul. 1980 - 31 Mar. 1981
I. Ladany, E. R. Levin, C. W. Magee, and R. T. Smith Nov. 1981 59 p refs
(Contract NAS1-15962)

(NASA-CR-3477; PRRL-81-CR-12) Avail: NTIS HC A04/MF A01 CSCL 20E

Materials studies as well as general and specific device development were carried out in the InGaAsP system. A comparison was made of three standard methods of evaluating substrate quality by means of dislocation studies. A cause of reduced yield of good wafers, the pullover of melt from one bin to the next, has been analyzed. Difficulties with reproducible zinc acceptor doping have been traced to segregation of zinc in the In/Zn alloy used for the doping source. Using EBIC measurments, the pn junction was shown to drift in location depending on factors not always under control. An analysis of contact structures by SIMS showed that the depth to which the sintered Au/Zn contact penetrates into the structure is typically 0.13 microns, or well within the cap layer and out of the p-type cladding and thus not deleterious to laser prformance. The problem of single-mode laser development was investigated and it was shown to be related to the growth habit over four different possible substrate configurations. The fabrication of constricted double heterojunctions, mesa stripe buried heterostructures, and buried heterostructures was discussed, and measurements were presented on the device properties of single-mode buried heterostructure lasers. Results include single spectral line emission at 3 mW and a threshold current of 60 mA. B.W.

MASS SPECTROMETRY OF THE CO2 LASER PLASMA Final Report, Jul. 1975 - Sep. 1979

David E. Toodle Jun. 1981 74 p refs
(AF Proj. 2301)
(AD-A104344; AFWAL-TR-80-2029) Avail: NTIS HC A04/MF A01 CSCL 20/5

The neutral and ion chemistry of the CO2 laser mixture have been studied in detail by using a quadrupole mass spectrometer and a theoretical model. Experimentally, CO2 is observed to dissociate primarily by direct electron impact producing the dominant neutral species CO and O2. Little or no N2 dissociation occurs in a N2/Ar discharge; however, the dissociation of N2 increases when it is added to a mixture containing CO2. Consequently, the dominant nitrogen oxide in discharges containing CO2 and N2 is NO. The major positive ions are CO2(+), O2(+), CO(+), and N2(+); and the major negative ions are NO2(-), NO3(-), O2(-), O(-)and, CO3(-). CO2 dissociation is reduced by as much as 20% at a discharge current of 80mA with the addition of 2% H2. Techniques for using a mass spectrometer to sample from glow discharges are also discussed. RELIABILITY AND MAINTAINABILITY ASSESSMENT REPORT FOR LASER SCANNER IMAGE GENERATION SYSTEM, REVISION A Final Report

M. Edmondson 15 Jan. 1981 144 p
(Contract N61339-74-C-0039; DA Proj. 1F4-64204-D-275)
(AD-A104239; LR-1029-Rev-A) Avail: NTIS HC A07/MF A01 CSCL 14/5

This document sets forth the procedures, criteria and conclusions associated with the reliability and maintainability assessment for the Laser Scanner Image Generation System (LSIG). The objective of the 12 day assessment was to evaluate the reliability/maintainability potential of the LSIG, specifically with regard to operational availability. Data accrued on the breadboard system concerning those design characteristics influencing operational availability - reliability, stability, and maintainability - was to be combined with data from operation during the development period and vendor data to accomplish this objective. To the extent possible, parametric estimates were to be developed and compared to the design goals of the Link S.O.W. GRA

DETERMINATION OF PULSED CO2 LASER DAMAGE THRESHOLDS OF OPTICAL SURFACES

J. C. Anctil and R. W. MacPherson Mar. 1981 45 p refs
(AD-A104424; DREV-R-4197/81) Avail: NTIS HC A03/MF A01 CSCL 20/6

An experimental technique is described for determining the damage thresholds of glass and plastic optical material surfaces, opaque to laser radiations, when irradiated with a pulsed TEA-CO2 laser. Use of a probit analysis to estimate the irradiance required for a 50% probability of damage gives threshold levels of 4.0 J/(sq cm) for fused silica, 2.1 J/(sq cm) for soda-lime glass, 2.3 J/(sq cm) for polycarbonate, 2.3 J/(sq cm) for acrylic and 1.7 J/(sq cm) for polystyrene plastics. The significance of the statistical distributions observed in attributing various mechanisms to the damage is discussed. Finally, some improvements are suggested to make the measurements more accurate. Author (GRA)

PULSED DF LASER EFFECTS STUDY Final Report

R. B. Hall, W. E. Maher, and D. B. Nichols Jul. 1981 106 p refs
(Contract F29601-79-C-0003; AF Proj. 3326)
(AD-A104575; AFWL-TR-80-104) Avail: NTIS HC A06/MF A01 CSCL 20/5

This study of DF laser interaction with materials investigated the amount of energy coupled to targets. Large focal spot dimensions were obtained with the Boeing photo-initiated 50-1 pulsed chemical laser with a stable resonator. Effects experiments emphasized metallic targets, especially aluminum. The single pulse coupling results yielded absorbed fluence values greater than those obtained with comparable energies at 10.6 micrometer wavelength. Ambient pressure and angle of incidence were varied. Research results also showed multiple-pulse effect at DF wavelength. Multiple-pulse thermal coupling experiments with aluminum demonstrated that, after 10 shots on the same spot, the coupled fluence per pulse doubled. Because of target melting and vaporization, both the intrinsic absorptivity and the plasma enhanced coupled fluence of succeeding pulses is greatly increased. In general, the multiple pulse effect is intensity-dependent and is small at either low or high intensities. Energy deposition was tested for uniformity by measuring the rises in temperature at five locations within the focal spot with an array of thermocouples. GRA

CONCEPTUAL DESIGN OF AN ANGULAR MULTIPLEXED RARE GAS HALIDE LASER FUSION DRIVER Final Technical Report, 1 Aug. 1979 - 31 May 1980

Joel H. Parks Nov. 1980 338 p refs
(Contract DE-AC08-79DP-40113)
(DE81-029900; DOE/DP-40113/1) Avail: NTIS HC A15/MF A01

A conceptual definition for angular multiplexed rare gas halide drivers was formulated and several design examples analyzed. Angular multiplexed rare gas halide lasers can be designed to meet inertial confinement fusion requirements. These lasers are scalable, emit at short wavelengths (KiF 250 nm), and through the use of optical angular multiplexing, produce the required high energy (approx. 1 to 5 MJ) in a short plse (approx. 10 nsec) with projected overall efficiency in the range of 5 to 7%. TWO-DIMENSIONAL THEORY AND SIMULATION OF FREE ELECTRON LASERS
Thomas J. T. Kwan and John R. Cary 1981 9 p refs Presented at the 4th Intern. Topical Conf. on High-Power Electron and Ion-Beam Res. and Technol., Palaiseau, France, 29-30 Jun. 1981
(DE81-025365; LA-UR-81-1936; CONF-7405-eng-36) Avail: NTIS HC A02/MF A01

Two-dimensional homogeneous theory of free-electron lasers with a wiggler magnetic field of constrant wavelength was formulated. It was found that waves propagating obliquely with respect to the electron beam are always unstable with appreciable growth rates; therefore, mode competition among the on-axis and off-six modes is an important consideration in the design of the free-electron laser. Furthermore, electromagnetic waves with group velocities opposite to the direction of electron beam propagation are absoulutely unstable if k sub o, v sub o omega sub pe (1/gammace/2) + 1/gamma (1/2). Due to long nonlinear saturation levels of the low frequency absolute instability, the dynamics of the electron beam, and the generation of the high frequency electromagnetic radiation can be severely affected. Two-dimensional particle simulations show that efficiency of genration of the on-axis high-frequency of the off-axis modes. In addition, complete disruption of the electron beam and laser oscillation due to the onset of the absolute instability were observed in simulations. DOE

STIMULATED RAMAN STUDIES OF CO2-LASER-EXCITED SF6
P. Esherick, A. Jay Grimley, and Adelbert Wyoung 1981 8 p refs Presented at the Intern. Conf. on Laser Spectroscopy, Alberta, Canada, 29 Jun. 1981
(Contract DE-AC04-76DP-00789)
(DE81-025829; SAND-81-1589C) Avail: NTIS HC A02/MF A01

The use of Stimulated Raman Spectroscopy (SRS) for high resolution studies of transient species is reported. Specifically, SF6 molecules excited by a CO2 laser are used as a prototypical system for examining these capabilities. Stimulated Raman techniques are used to the desired spectral region with high temporal and spectral resolving power. The preliminary results reported demonstrate the applicability of SRS techniques to studying the dynamics of multi-photon excitation processes in molecular systems. These experiments illustrate the potential capability for obtaining time resolved spectral information with SRS, and may lead the way to eventual Raman probing of molecular photogragments or other transient species. ADVANCED SUPERPOSITION METHODS FOR HIGH SPEED TURBOPUMP VIBRATION ANALYSIS Interim Report
C. E. Nielson and A. D. Campany 19 May 1981 96 p refs
(Contract NAS3-22480)
(NASA-CR-165379; RI/RD81-149) Avail: NTIS HC A05/MF A01 CSCL 13I

The small, high pressure Mark 48 liquid hydrogen turbopump was analyzed and dynamically tested to determine the cause of high speed vibration at an operating speed of 92,400 rpm. This approaches the design point operating speed of 95,000 rpm. The initial dynamic analysis in the design stage and subsequent further analysis of the rotor only dynamics failed to predict the vibration characteristics found during testing. An advanced procedure for dynamics analysis was used in this investigation. The procedure involves developing accurate dynamic models of the rotor assembly and casing assembly by finite element analysis. The dynamically instrumented assemblies are independently rap tested to verify the analytical models. The verified models are then combined by modal superposition techniques to develop a completed turbopump model where dynamic characteristics are determined. The results of the dynamic testing and analysis obtained are presented and methods of moving the high speed vibration characteristics to speeds above the operating range are recommended. Recommendations for use of these advanced dynamic analysis procedures during initial design phases are given. Author

JT8D HIGH PRESSURE COMPRESSOR PERFORMANCE IMPROVEMENT Progress Report, Sep. 1978 - Apr. 1981
W. O. Gaffin 11 Nov. 1981 47 p ref
(Contract NAS3-20630)
(NASA-CR-165531; PWA-5515-162) Avail: NTIS HC A03/MF A01 CSCL 13I

An improved performance high pressure compressor with potential application to all models of the JT8D engine was designed. The concept consisted of a trenched abradable rubstrip which mates with the blade tips for each of the even rotor stages. This feature allows tip clearances to be set so blade tips run at or near the optimum radius relative to the flowpath wall, without the danger of damaging the blades during transients and maneuvers. The improved compressor demonstrated thrust specific fuel consumption and exhaust gas temperature improvements of 1.0 percent and at least 10 C over the takeoff and climb power range at sea level static conditions, compared to a bill-of-material high pressure compressor. Surge margin also improved 4 percentage points over the high power operating range. A thrust specific fuel consumption improvement of 0.7 percent at typical cruise conditions was calculated based on the sea level test results. B.W.

LIQUID OXYGEN TURBOPUMP TECHNOLOGY Final Report
C. E. Nielson Nov. 1981 252 p refs
(Contract NAS3-21356)
(NASA-CR-165487; RI/RD81-199) Avail: NTIS HC A12/MF A01 CSCL 13I

A small, high-pressure, LOX turbopump was designed, fabricated and tested. The pump is a single-stage centrifugal type with power to the pump supplied by a single-stage partial-admission axial-impulse turbine. Design conditions included an operating speed of 7330 rad/s (70,000 rpm), pump discharge pressure of 2977 N/sqcm (4318 psia), and a pump flowrate of 16.4 Kg/s (36.21 lb/s). The turbopump contains a self-compensating axial thrust balance piston to eliminate axial thrust loads on the bearings during steady-state operation. Testing of the turbopump was achieved usng a gaseous hydrogen high-pressure flow to drive the turbine, which generally is propelled by LOX/LH2 combustion products, at 1041K (1874 R) inlet temperature and at a design pressure ratio of 1.424. Test data obtained with the turbopump are presented which include head-flow-efficiency performance, suction performance, balance piston performance and LOX seal performance. Mechanical performance of the turbopump is also discussed. Author

In a previous report to the Office of Naval Research, several thermal and thermomechanical aspects of tribology pertinent to rolling/sliding contacts were described in some detail. In this final report, there is presented an account of related work on surface chemical reactions occurring at high pressures. A model lubricant system - lauric acid in dodecane - in contact with a simulated bearing surface - thin films of vacuum-deposited iron - was employed in these studies. Fourier transform infrared spectroscopy was used to detect the formation of species arising from chemical reactions occurring between the acid molecules and the substrate. Details of the experimental technique and its application to the present program are given. Author (GRA)

QUIET BEARING SURFACE CHARACTERIZATION Memorandum Report, 1 Oct. 1980 - 1 Aug. 1981
R. A. Jeffries, H. Ravner, and I. L. Singer 17 Sep. 1981 13 p refs
(AD-A104412; NRL-4625) Avail: NTIS HC A02/MF A01 CSCL 13/9

Surface chemical and topographical features of bearings which passed or failed Anderometer noise testing were correlated with their noise characteristics. No surface chemical differences existed between noisy or quiet bearings. The former did, however, exhibit bands of circular scratches on 'polar' ends of ball surfaces with an equatorially located narrow 'frost' band consisting of small (2-5 micrometers in diameter) pits of the type associated with contact fatigue. Quiet bearings also possessed frost bands which were always wider and sometimes multiple but did not possess the bands of scratches. The ability of the balls in a noisy bearing to roll freely are believed to be hindered; the resulting increase in contact-Hertz loads and sliding frictional forces result in the generation of noise. Interim solutions to the problem are also discussed. Author (GRA)

NOVEL DESIGN OF PRESSURE VESSELS AND THERMAL SHIELDS IN COAL GASIFIERS
B. W. Loo Jun. 1981 11 p refs Presented at the Symp. on Instr. and Control for Fossil Energy Processes, San Francisco, 7-10 Jun. 1981
(Contract W-7405-eng-48)
(DE81-025828; LBL-12807) Avail: NTIS HC A02/MF A01

Two outstanding problems in commercial sized coal gasifiers, namely, detecting and locating any deterioration in the refractory thermal barrier and the construction of a safe pressure vessel utilizing advanced carbon fiber composite technology are described. Design considerations are given for a typical gasifier some 30 feet in diameter by 150 feet tall with a maximum internal temperature and pressure of 2500 F and 1500 psi respectively. A system of computer controlled cooling circuits is deployed between the refractory barrier and the external lightweight pressure vessel. Multiple levels of redundancy are built in to guard against any component failure. Through the sensing of coolant temperature and the modulation of coolant flow, a map of heat flux distribution over the gasifier wall may be generated with a spatial resolution of about 5 feet. Results indicate that the coolant temperature rise can be maintained by no more than 90 F with only a modest amount of coolant flow. DOE

AN EVALUATION OF THREE-WAY CONTROL SINGLE AND DUAL BED CATALYSTS AS APPLIED TO HEAVY-DUTY GASOLINE ENGINES
Thomas Nugent Apr. 1981 30 p refs
(PB81-224982; EPA-AA-SDSB-81-4) Avail: NTIS HC A03/MF A01 CSCL 21G

A test program to evaluate the applicability of three-way control (TWC) and dual-bed catalysts (TWC and Oxidation Catalysts) in combination with a closed-loop control stoichiometric (feedback) carburetor on a production 1978 IHC 404 CID heavy duty gasoline engine was conducted. Testing was conducted according to the Federal test procedure for the heavy-duty transient cycle. The test program consisted of forty-six cold-start tests, fifty-eight confimatory hot-start tests run to insure accuracy and precision of the cold-start tests, and fourteen hot-start tests run to identify the effects of air/fuel ratio control points on NOx emissions. The effects of various combinations of catalysts, EGR, air/fuel control points, carburetor response times and air pump capacity on emissions, fuel economy and engine power were examined. GRA

BRAYTON/RANKINE 10-TON GAS-FIRED SPACE CONDITIONING SYSTEM, PHASE 2 Annual Report
16 Mar. 1981 103 p refs
(Contracts GRI-5014-341-0114; W-7405-eng-26)
(PB81-223372; GRI-80/0053; ATR-1) Avail: NTIS HC A06/MF A01 CSCL 13I

The heat-actuated space conditioning system provides moe efficient use of natural gas and is intended as an all-gas alternative to the electric heat pump. The system employs a subatmospheric natural-gas-fired heat pump. A centrifugal R-12 refrigerant compressor is driven directly from the Brayton engine rotating group through a hermetically sealed coupling. Unique features that offer high life-cycle performance include a permanent magnet coupling, foil bearings, and atmospheric in-line combustor, and a high-temperature recuperator. Predicted overall engine efficiency is 27 percent and predicted overall coefficient of performane (COP) at the energy source is 1.0 in cooling and 1.2 to 1.4 in heating. GRA

EPA EVALUATION OF THE FUEL-MAX DEVICE UNDER SECTION 511 OF THE MOTOR VEHICLE INFORMATION AND COST SAVINGS ACT
Edward Anthony Barth Jun. 1981 140 p
(PB81-229866; EPA-AA-TEB-511-81-10A; EPA-AA-TEB-511-81-10B) Avail: NTIS HC A07/MF A01 CSCL 13F

The 'FUEL-MAX' device is an air bleed device that replaces the EGR valve. It is claimed to conserve fuel. The purpose of the EGR system is to control oxides of nitrogen (NOx). Removal of the EGR valve to install the 'FUEL-MAX' disables the EGR system and would be expected to result in a large increase in NOx emissions. Test data submitted by the applicant confirmed this prediction as well as indicating that 'FUEL-MAX' might improve fuel economy. Although the data did no adequately quatify the amount of this improvement, EPA chose to conduct confirmatory testing. GRA

EDDY CURRENT FLOWS AROUND CRACKS IN THIN PLATES FOR NONDESTRUCTIVE TESTING Topical Report, Aug. 1980 - Mar. 1981
S. Mukherjee, M. A. Morjaria, and Francis C. Moon 1 Mar. 1981 40 p refs
(Contract N00014-79-C-0224)
(AD-A104407) Avail: NTIS HC A03/MF A01 CSCL 20/3

The boundary element method is used to calculate the induced electric current flow around cracks in thin conducting plates. A low frequency approximation leads to a Poisson equation for the current density potential or stream function. A kernel is used which produces the correct singularity at the crack tip. The boundary condition on the crack, derived from Faraday's law, requires the line integral of the current density around the crack to be zero. Numerical results for induced currents due to a circular induction coil are given. These results show that hot spots, due to Joule heating, can occur at the tips of the crack. Comparison of numerical results with infrared scanning experiments of eddy currents in a cracked plate are given. It is hoped that the numerical method presented here will provide a tool to simulate both new and conventional nondestructive eddy current testing techniques. GRA

RECENT ADVANCES IN STATISTICAL METHODS FOR SYSTEM RELIABILITY USING BERNOULLI SAMPLING OF COMPONENTS
Bernard Harris and Andrew P. Soms, (Wisconsin Univ., Milwaukee) Jul. 1981 13 p refs
(Contract N00014-79-C-0321; DAAG29-80-C-0041)
(AD-A104436; TR-643) Avail: NTIS HC A02/MF A01 CSCL 12/1

The paper provides a survey of results in statistical inference in systems reliability using Bernoulli sampling of individual components. Particular attention is given to the notion of Buehler optimally and its implementation in such problems. Recent results of the authors on Buehler optimal confidence bounds on the reliability of series and parallel systems are discussed. For series systems, these results employ a generalization of an inequality of Sudakov. For parallel systems. Buehler optimal bounds are obtained for small numbers of failures using the notion of Schur concavity. Estimates of the optimal bounds are obtained in those cases for which the property of Schur concavity does not hold. Author (GRA)

FEASIBLE OBJECTIVE CONFIDENCE BOUNDS FOR SYSTEM RELIABILITY
M. Vernon Johns, Jr. 20 Aug. 1981 50 p refs
(Contract DAAG29-79-C-0166)
(AD-A104260; TR-6; ARO-16668.4-M) Avail: NTIS HC A03/MF A01 CSCL 12/1

The basic problem of determining objective (frequentistic) confidence bounds for the reliability of a series system based on failure data from tests of the independent components is addressed. The notion of confidence bounds based on orderings imposed on the sample space is exploited, and certain optimality considerations are incorporated. Advantage is taken of the simplifications resulting from the use of the Poisson approximation for data from highly reliable components. Tables of exact confidence bounds are produced for the case of two-component systems. GRA

(AD-A104552; ADL-C-82426-Pt-1) Avail: NTIS HC A21/MF A01 CSCL 07/4

Selected, evaluated estimation methods are presented for 10 environmentally important physicochemical properties of organic chemicals. The methods selected are applicable to a variety of chemical classes, are easy to use, require a minimum of input data, and are reasonably accurate. Each method has a descriptive text, step-by-step instructions, worked-out examples, and supplementary information allowing the user to estimate the likely uncerinty of an estimated value. Topics covered include octanol/water partition coefficient; solubility in water; solubility in various solvents; adsorption coefficient for soils and sediments; bioconcentration factor in aquatic organisms; acid dissociation constant; rate of hydrolysis; rate of aqueous photolysis; rate of biodegradation; and atmospheric residence time. Since the rates of aqueous photolysis and of biodegradation cannot be estimated, only qualitative or semiquantitative information is provided for these. GRA

STRENGTH BEHAVIOUR OF FATIGUE CRACKED LUGS

Ph.D. Thesis
W. Geier Jan. 1981 101 p refs Transl. into ENGLISH of Festigkeitsverhalten von Rissbehaftetan Augenstaeben, Munich, 1980
(RAE-Lib-Trans-2057; BR80140) Copyright. Avail: Issuing Activity

The stress intensity is described on the basis of the linear-elastic principles. Examination of various methods for determining the stress intensity shows that the crack propagation method is particularly appropriate for the lug. Due to a lack of suitable tests on cracked lugs, a gradual approach to the lug is made, starting with an infinite plate with a hole and continuing with a finite plate with and without pin loaded holes, since stress intensity solutions are already available in this case. An experimental investigation of the lug not only enables the stress intensity to be determined, but also shows the interrelationship between the essential lug parameters, the crack propagation behavior and the stress distribution in a non-cracked lug. It is possible to evolve a stress intensity solution for cracked lugs in the form of a semi-empirical approach, which takes into account the essential lug parameters. Author

FATIGUE INITIATION AT A HIGH OR LOW NUMBER OF CYCLES
J.-L. Chaboche Nov. 1980 52 p refs Transl. into ENGLISH of "Amorcage en Fatigue a Faible ou Grand Nombre de Cycles" Rept. ONERA-TP-1979-134 ONERA, France
(RAE-Lib-Trans-2056; BR77988; ONERA-TP-1979-134) Copyright. Avail: Issuing Activity

This general framework is based on the thermodynamics of deformable and damageable solids, making possible the introduction of the concept of variable internal macroscopy, part of which is associated with variable damage more specifically related to fatigue problems. The different 'measurements' of this variable of state are discussed under the mechanical engineer's optics of continuous media, and the thermodynamic model makes it possible to justify certain basic hypotheses concerning the nature of the damage, its final value at rupture, its mode of evolution, its irreversibility, its effect on the behaviour of other material characteristics. The most practical aspects are approached by way of observations generally carried out during fatigue tests, namely in the domain of the fatigue limit, the endurance limit or in the domain of fatigue at a low number of cycles. The classical criteria are recalled, making it possible to interpret fatigue limits, the effect of the mean stress, the number of cycles at crack initiation, the accumulation of damage, and phenomenological models are proposed within the scope of isotropic damage. Problems associated with elevated temperatures, which can lead to effects of an interaction between the fatigue damage and flow damage are dealt with more briefly. Author

AN IMPROVED TRANSVERSE SHEAR DEFORMATION THEORY FOR LAMINATED ANTISOTROPIC PLATES
M. V. V. Murthy Nov. 1981 39 p refs
(NASA-TP-1903; L-14533) Avail: NTIS HC A03/MF A01 CSCL 20K

An improved transverse shear deformation theory for laminated anisotropic plates under bending is presented. The theory eliminates the need for an arbitrarily chosen shear correction factor. For a general laminate with coupled bending and stretching, the constitutive equations connecting resultants with average displacements and rotations are derived. Simplified forms of these relations are also obtained for the special case of a symmetric laminate with uncoupled bending. The governing equation for this special case is obtained as a sixth-order equation for the normal displacement requiring prescription of the three physically natural bounday conditions along each edge. For the limiting case of isotropy, the present theory reduces to an improved version of Mindlin's theory. Numerical results are obtained from the present theory for an example of a laminated plate under cylindrical bending. Comparison with results from exact three-dimensional analysis shows that the present theory is more accurate than other theories of equivalent order. Author

MODAL ANALYSIS USING A FOURIER ANALYZER, CURVE-FITTING, AND MODAL TUNING
Roy R. Craig, Jr. and Yung-Tseng Chung 1 Oct. 1981 41 p refs
(Contract NAS8-33980)
(NASA-CR-161886; CAR-81-1) Avail: NTIS HC A03/MF A01 CSCL 20K

The proposed modal test program differs from single-input methods in that preliminary data may be acquired using multiple inputs, and modal tuning procedures may be employed to define closely spaced frquency modes more accurately or to make use of frequency response functions (FRF's) which are based on several input locations. In some respects the proposed modal test proram resembles earlier sine-sweep and sine-dwell testing in that broadband FRF's are acquired using several input locations, and tuning is employed to refine the modal parameter estimates. The major tasks performed in the proposed modal test program are outlined. Data acquisition and FFT processing, curve fitting, and modal tuning phases are described and examples are given to illustrate and evaluate them. J.M.S.

STUDY OF FOLDABLE ELASTIC TUBES FOR LARGE SPACE STRUCTURE APPLICATIONS, PHASE 3 Final Report
Irving W. Jones and Steve O. Mitchell Sep. 1981 46 p refs
(Grant NsG-1320)
(NASA-CR-164929) Avail: NTIS HC A03/MF A01 CSCL 20K

A bi-convex foldable elastic tube, suitable for use in self deploying space structures, was subjected to a series of buckling tests to deterine injtial buckling loads, collapse loads, and the buckling mode. The tube is cylindrical with a cross-section that is lenticular-like with flared edges. It is capable of being flattened in the center and folded compactly, storing up strain energy in the process. Upon removal of constraint, it springs back to its original straight configuration, releasing the stored strain energy. The tests showed that this type of tube has good resistance to buckling, with the initial buckling loads all falling within or above the range of those for comparable circular cylindrical tubes. M.G.

DYNAMIC FRACTURE IN VISCOELASTIC SOLIDS Annual Report, 1 Jan. - 31 Aug. 1981
K. S. Kim and Wolfgang G. Knauss 2 Jul. 1981 87 p refs
(Contract N00014-78-C-0634)
(AD-A104687; GALCIT-SM-81-7) Avail: NTIS HC A05/MF A01 CSCL 11/9

Dynamic crack propagation in viscoelastic media is studied experimentally with a polyester known as Homalite 100 and a polyurethane known as Solithane 113 at various temperatures. Employing the optical method of caustics, high speed photography is used to determine the variation of the stress intensity factor and the velocity of a running crack initiated and driven by the dynamic step loading on the faces of an initial semi-infinite track in an infinite medium. The loading condition is simulated experimentally with the technique introduced by Smith and Knauss. In this work an application of the method of caustics is extended for the determination of the time dependent stress intensity factor of a running crack in a viscoelastic material. Also, the viscoelastic effects on the initiation of a running crack, the variation of the stress intensity factor, the speed of the crack and the branching of the running crack are discussed. In addition, a mechanism of branching is proposed based on the study of the fracture surfaces. Author (GRA)

ESTIMATING THE STATISTICAL PROPERTIES OF CRACK GROWTH FOR SMALL CRACKS Final Report, Sep. 1979 - Sep. 1980
P. W. Hovey, J. P. Gallagher, and A. P. Berens Wright-Patterson AFB, Ohio AFWAL Mar. 1981 33 p refs
(Contract F33615-78-C-5184; AF Proj. 2418)
(AD-A104672; UDR-TR-80-123; AFWAL-TR-81-4016) Avail: NTIS HC A02/MF A01 CSCL 11/6

A series of statistical studies were conducted on two sets of fatigue crack growth data which were generated under variable amplitude loading from cracks that initiated in 7475-T7351 Aluminum down in the bore of typical aircraft quality prepared holes. The study considered fatigue crack growth (life) behavior and fatigue crack growth rate behavior. Generally, the study showed that small crack growth behavior was similar to that observed for larger cracks and that a stress intensity factor parameter could be used to describe the mean trend of the fatigue crack growth rate behavior via a power law relationship. STRUCTURAL ANALYSIS COMPUTER PROGRAMS FOR RIGID MULTICOMPONENT PAVEMENT STRUCTURES WITH DISCONTINUITIES, WESLIQID AND WESLAYER. REPORT 1: PROGRAM DEVELOPMENT AND NUMERICAL PRESENTATIONS Technical Report, 1 Oct. 1978 - 30 Sep. 1979
Yu T. Chou May 1981 150 p refs
(DA Proj. 4A7-62719-AT-40)
(AD-A104545; WES/TR/GL-81-6-1) Avail: NTIS HC A07/MF A01 CSCL 13/13

This study was conducted to develop finite element computer programs to calculate stresses and deflections in rigid pavements with cracks and joints subjected to loads and temperature warping, as well as in the supporting subgrade soil. The joints are connected by dowel bars or other load transfer devices. The slabs can have full or partial loss of subgrade support over designed regions of the slabs. Multiple-wheel loads can be handled and the number of wheels is not limited. Two programs were developed, one called WESLIQID and the other WESLAYER. The former is for pavements on liquid foundations and the latter is for linear layered elastic solids. Variable slab thicknesses and moduli of subgrade reaction are incorporated in the WESLIQID program, and any number of slabs arrayed in an arbitrary pattern can be handled. Because of larger computer storage requirement and computational complexity, the WESLAYER program is limited to two slabs. GRA

LIGHTWEIGHT CONCRETE MATERIALS AND STRUCTURAL SYSTEMS FOR WATER TANKS FOR THERMAL STORAGE Final Report

R. W. Buckman, Jr., G. G. Elia, and Y. Ichikawa Dec. 1980 98 p refs
(Contracts DE-AC02-78CS-34703; EM-78-C-02-4703)
(COO-4703-26) Avail: NTIS HC A05/MF A01

Thermally efficient hot water storage tanks were designed, fabricated and evaluated. The tanks were made using cellular concrete at a nominal density of 100 lb/cu ft for the structural elements and at a 30 lb/cu ft density for the insulating elements. Thermal performance testing of the tanks was done using a static decay test. A series of composition modifications to the cellular concrete mix were investigated and the addition of alkaline resistant glass fibers was found to enhance the mechanical properties at no sacrifice in thermal behavior. Economic analysis indicated that cellular concrete provides a cost effective insulating material. The total portability of the plant for producing cellular concrete makes cellular concrete amenable to on-site fabrication and uniquely adaptable to retrofit applications. DOE

FINITE ELEMENT ANALYSIS OF THE SPLIT HOPKINSON BAR

Mathew J. Kramer (Rochester Univ., N.Y.) Jul. 1981 30 p refs
(Contract W-7405-eng-36)
(DE81-030387; LA-8921-MS) Avail: NTIS HC A03/MF A01

The finite element method, its ability to analyze the split Hopkinson bar apparatus used in studying the dynamic properties of materials was investigated. An explicit isoparametric finite element computer code, HONDO, was investigated for its accuracy in solving stress wave propagation problems in cylindrical bars in one and two dimensions. HONDO was checked against a two dimensional finite difference wave code, TOODY, for solution accuracy and computational time in analyzing the split Hopkinson bar. It is concluded that HONDO is capable of using fewer mesh points than TOODY, and HONDO requires less storage. DOE

DYNAMIC MEASUREMENT OF POISSON'S RATIO IN GRANULAR MATERIALS AT 0.2 TO 0.8 GPa

C. W. Olsen Jul. 1981 20 p refs
(Contract W-7405-eng-48)
(DE81-027559; UCRL-85539) Avail: NTIS HC A02/MF A01

A technique for mesurement of Poisson's ratio for shock-loaded, granular material was developed. All tests were conducted in a 63.5 mm diameter gas-gun. A fixed knife-edge of three thicknesses of 0.3 mm stainless steel was instrumented with carbon stress gauges and Constantan strain gauges. A 0.13 mm stainless steel cover provided gauge protection. The knife-edge was mounted in the target material, dry sand, so as to measure the transverse pressure. By knowing the impact pressure and the orthogonal pressure, Poisson's ratio could be determined. Since the gauges were being loaded edge-on, they had to be kept small in the directon of shock propagation. Additonally, the effects of strain were measured with the Constantan gauges and subtraced. In the sand (1.70 Mg/cu m, approximately 37 vol % porosity) the apparent Poisson's ration increases with impact stress, going from approximately 0.20 at 0.2 GPa to approximately 0.34 at 0.73 GPa. DOE

ON-LINE FAILURE DETECTION OF VIBRATING STRUCTURES

S. G. Azevedo, J. V. Candy, and D. L. Lager 27 May 1981 26 p refs Presented at the ASME Conf. on Mech. Vibration and Noise, Hartford, 20-23 Sep. 1971
(Contract W-7405-eng-48)
(UCRL-86099; CONF-810918-1) Avail: NTIS HC A03/MF A01

Nondestructive evaluation of vibrating structures for failure detection is addressed. Recent advances in signal processing and analysis of vibrating structures are applied to this problem with promising results. The techniques used are recursive on-line algorithms which include stochastic models for noise sources. An experiment was designed to investigate the feasibility of signal processing procedures for failure detection. A given structure was excited and its shock response measured using an accelerometer. The response data was digitized and processed. This failure detection problem was approached from the stochastic estimation theory viewpoint. A nonlinear identification algorithm (using an extended Kalman filter) is utilized for estimating modal parameters from vibration data. The estimator is followed by a decision device to detect structural failures or anomalies. The results indicate reasonable performance of these techniques for model characterization and failure detection. Examples and graphical illustrations are presented. DOE

ANALYSES OF DUCTILE FLOW AND FRACTURE IN TWO DIMENSIONS

M. E. Kipp and Lee Davison 1981 8 p refs Presented at the Shock Compression of Solids Conf., Stanford, Calif., 23 Jun. 1981
(Contract DE-AC04-76DP-00789)

(DE81-023651; SAND-81-0070C; CONF-8106125-1) Avail: NTIS HC A02/MF A01

Viscoplastic flow and spall fracture by ductile void growth is discussed. The method was extended to configuration of dimensional plane strain and axisymmetric deformation. Current work includes reduction of the general theory to a form applicable to these cases, and incorporation of the resulting equations into a Lagrangian finite difference code suitable for analyzing nonlinear wave propagation. Results of applying this code to study of symmetric axial impact of aluminum bars are presented. DOE

VIBRATION SIGNATURE ANALYSIS AND ACOUSTIC-EMISSION MONITORING AT BRAYTON POINT Final Report

P. J. Pekrul and S. Pennise Jul. 1981 268 p Sponsored by Electric Power Research Inst.
(EPRI Proj. 734-1)
(DE81-904232; EPRI-CS-1938) Avail: NTIS HC A12/MF A01

On-line monitoring techniques of vibration signature analysis and acoustic emission detection are discussed in light of a two-year monitoring program at the Brayton Point plant of New England Power Service Company. Included in the study are discussion relating to sensor selection and location, spectrum analysis techniques, computation equipment, and display devices. Specific plant equipment failures occurred during the monitoring period, and the appropriate vibration and acoustic emission data are analyzed to assess any deviations prior to failure. Vibration signature analysis is seen to be a well-developed technique which can be successfully implemented into a preventative maintenance system for fossil plants. Before being able to detect changes in vibration spectra due to malfunction, however, it is stressed that a full understanding of the effect of normal variations in plant parameters (load, speed, etc.) should be achieved. This implies a statistical base of information and derived correlation equations. Acoustic emissions may have application for detection of material failure, such as shaft cracking, and for detection of tube leaks from heat exchangers. These tests, however, were inconclusive and suggest that considerable characterization data are required before acoustic emissions can be successfully implemented as a diagnostic technique. DOE

IDENTIFICATION OF LITHOLOGIC UNITS USING MULTI-CHANNEL IMAGING SYSTEMS Ph.D. Thesis

Diane Louise Evans 1981 129 p
Avail: Univ. Microfilms Order No. 8121194

It is shown that is possible to compare laboratory reflectance spectra directly with multispectral images. The signal that would be produced if a particular laboratory sample were in a detector's field of view was calculated and converted into a digital number of DN value. Stacks of spatially registered multispectral images were then searched for materials that had spectral characteristics similar to the laboratory samples. When laboratory reflectance spectra of a suite of Hawaiian samples were compared to Viking Lander images of Mars, a weathered basaltic tephra from a Hawaiian cinder cone was found to have spectral characteristics that were similar in all bandpasses to surficial deposit at the Viking 1 site. When the reflectance spectra of the suite of samples were compared to Viking Orbiter images, the same Hawaiian tephra was found to correspons to a regional spectral unit in the low latitudes of Mars. It was also possible to compare laboratory reflectance spectra to Landsat images of the Earth. Comparison of laboratory reflectance spectra with multispectral images make it possible to derive compositional information from the images. Dissert. Abstr.

A MODEL DESCRIBING THE MICROWAVE EMISSION FROM A MULTI-LAYER SNOWPACK AT 37 GHZ

M. Abdelrazik, F. Ulaby, and H. Stiles Feb. 1981 136 p refs
(Grant NsG-5335)
(NASA-CR-166708; RSL-TR-410-2) Avail: NTIS HC A07/MF A01 CSCL 08L

A multilayer emission model is described and applied to emission measurements obtained at 37 GHz and H polarization using a microwave radiometer attached to a truck-mounted boom in Steamboat Springs, Colorado in 1977. Estimated absorption and scattering coefficients and their dependence on wetness were obtained using calculated values of the dielectric constant at 37 GHz along with the model. It was found that the scattering coefficient is comparable in value to the absorption coefficient for dry snow however, the absorption coefficient increases linearly with increasing snow wetness while the scattering coefficient decreases linearly with increasing wetness. The emission from each layer of the snowpack was also calculated using the estimated coefficients. It is shown that for dry snow, the ground underneath the snowpack contributes about 45% of all measured emission while the rest is due to emission from all the layers within the snowpack. When the wetness of the top 5 cm layer of snowpack increases to about 2% by volume, this top 5 cm snowlayer contributes more than 90% of all the measured emission. A.R.H.

DEVELOPMENT OF THE COASTAL ZONE COLOR SCANNER FOR NIMBUS 7. VOLUME 1: MISSION OBJECTIVES AND INSTRUMENT DESCRIPTION Final Report

May 1979 76 p refs
(Contract NAS5-20900)
(NASA-CR-166720-Vol-1; F78-11-Rev-A) Avail: NTIS HC A05/MF A01 CSCL 14B

An Earth scanning six channel (detector) radiometer using a classical Cassegrain telescope and a Wadsworth type grating spectrometer was launched aboard Nimbus 7 in order to determine the abundance or density of chlorophyll at or near the sea surface in coastal waters. The instrument also measures the sediment or gelbstroffe (yellow stuff) in coastal waters, detects surface vegetation, and measures sea surface temperature. Block diagrams and schematics are presented, design features are discussed and each subsystem of the instrument is described. A mission overview is included. A.R.H.

AN EVALUATION OF THE SPATIAL RESOLUTION OF SOIL MOISTURE INFORMATION Final Report

Kenneth R. Hardy, Stephen H. Cohen, Linda Koshio Rogers, Hsiao-hua K. Burke, Robert C. Leupold, and Michael D. Smallwood Mar. 1981 83 p refs
(Contract NAS5-25527)
(NASA-CR-166724; ERT-P-7505-F) Avail: NTIS HC A05/MF A01 CSCL 08M

Rainfall-amount patterns in the central regions of the U.S. were assessed. The spatial scales of surface features and their corresponding microwave responses in the mid western U.S. were investigated. The usefulness for U.S. government agencies of soil moisture information at scales of 10 km and 1 km. was ascertained. From an investigation of 494 storms, it was found that the rainfall resulting from the passage of most types of storms produces patterns which can be resolved on a 10 km scale. The land features causing the greatest problem in the sensing of soil moisture over large agricultural areas with a radiometer are bodies of water. Over the mid-western portions of the U.S., water occupies less than 2% of the total area, the consequently, the water bodies will not have a significant impact on the mapping of soil moisture. Over most of the areas, measurements at a 10-km resolution would adequately define the distribution of soil moisture. Crop yield models and hydrological models would give improved results if soil moisture information at scales of 10 km was available. A.R.H.

RADAR MAPPING, ARCHAEOLOGY, AND ANCIENT LAND USE IN THE MAYA LOWLANDS

R. E. W. Adams (Cambridge Univ.), W. E. Brown, Jr., and T. Patrick Culbert (Arizona Univ.) 31 Mar. 1981 27 p refs
(Contract NAS7-100)
(NASA-CR-164931) Avail: NTIS HC A03/MF A01 CSCL 08B

Data from the use of synthetic aperture radar in aerial survey of the southern Maya lowlands suggest the presence of very large areas drained by ancient canals for the purpose of intensive cultivation. Preliminary ground checks in several very limited areas confirm the existence of canals and raised fields. Excavations and ground surveys by several scholars provide valuable comparative information. Taken together, the new data suggest that Late Classic period Maya civilization was firmly grounded in large-scale and intensive cultivation of swampy zones. A.R.H.

CONCEPTUAL DESIGN OF A COMPUTER-GENERATED TOPOGRAPHIC DISPLAY SYSTEM TO AID MISSION PLANNING AND MISSION CONDUCT BY ARMY AVIATORS Final Technical Report, Mar. 1980 - Jun. 1981

Steven P. Rogers Jun. 1981 136 p refs
(Contract DAHC-78-C-0012)
(AD-A104388; Rept-365-81; USAAVRADCOM-TR-78-0012-F) Avail: NTIS HC A07/MF A01 CSCL 15/7

This report describes the requirements for a computer-generated topographic display for use by Army aviators during performance of mission-planning and in-flight tasks, and presents a conceptual design for a system. Section I of the report describes the background leading up to the conduct of the project, the project objective, the project approach, and the organization of the report. Section II of the report provides a background in the missions, organization, and procedures of Army aviation units for readers not thoroughly familiar with these topics. Much of the information in this section is based on data from in-depth interviews with aviators of the 101st Airborne Division. Section III of the report describes the configuration and operation of the recommended computer-generated topographic display system. The general philosophy guiding the conceptual design is discussed, followed by a description of the system components and their functions. Extensive descriptions of the interactive, multi-function, control-display units are provided, accompanied by summaries of the aviator requirements, present deficiencies, and computer capabilities that led to the incorporation of the various special features of the system. PETROLEUM GEOLOGY AND RESOURCE ASSESSMENT OF THE MIDDLE CASPIAN BASIN, USSR, WITH SPECIAL EMPHASIS ON THE UZEN FIELD

G. Ulmishek and W. Harrison May 1981 157 p refs
(Contract W-31-109-eng-38)
(DE81-029951; ANL/ES-116) Avail: NTIS HC A08/MF A01

The Middle Caspian Basin contains up to 12,000 m (40,000 ft) of sedimentary rocks ranging in age from late Paleozoic to Quaternary and has over 100 oil and gas fields varying in size from small to supergiant. The Soviet literature reviewed covers: (1) tectonic zones of the basin, including details of the lower, intermediate, and upper structural complexes; (2) paleogeography, facies distribution, and conditions of organic matter accumulation in the major petroleum source rocks; (3) stages of oil and gas generation; (4) major hydrogeological features; and (5) producing regions of the basin. Total initial petroleum resources of the basin are estimated at 22.5 x 10(9) t (166 x 10(9) bbl), of which 16.00 x 10(9) t (118 x 10 (9) bbl) are yet to be discovered. Resources of the Offshore Caspian Sea area are estimated to be 12.1. 10(9) t (89.5 x 10(8) bbl). DOE

PLANNING A COMPREHENSIVE PROGRAM FOR EXPLORATION OF THE ANTHRACITE DEPOSITS OF THE NARRAGANSETT BASIN OF MASSACHUSETTS AND RHODE ISLAND, PHASE 1 AND 2 Final Report

J. W. Skehan Feb. 1981 131 p refs
(Contract DE-AC01-79RA-2036)
(DE81-028490; DOE/FE-20036/1) Avail: NTIS HC A07/MF A01

Coal deposits occur in a sporadic fashion throughout the Basin with little continuity as to the type of deposit and the quality of coal thus making it difficult, perhaps very expensive and risky, to base a drilling program soley on stepping out from known outcrops and coal occurrences. The combination of understanding the original depositional environment, its subsequent deformation to stepping out from known coal occurrences, is believed to be the most efficient basis for developing a comprehensive drilling program plan for the Basin. This limited exploration program produced resource estimates of 11.35 million tons of anthracite material in the eastern and 4.73 in the western part of Portsmouth, Rhode islands, area and 4.2 million tons in Plainville, Machusetts. These estimates are based on USGS recommended methods for resource determination. The cost of finding this material, based on the cost of the contracts, comes out to be approximately 1.5 cents per ton. DOE

IDENTIFICATION OF GEOPRESSURED OCCURRENCES OUTSIDE OF THE GULF COAST
Oscar Strongin 1981 6 p refs Presented at IECEC Conf., Atlanta, 9 Aug. 1981
(Contract DE-AC08-80NV-10133)
(DE81-025511; CONF-810812-28) Avail: NTIS HC A02/MF A01

Methane dissolved in saline formation waters under abnormally high pressure (geopressure) is one of several unconventional gas sources that is under intensive investigation by the Department of Energy. The most well known and studied region of geopressure in the US is the Gulf Coast geosyncline. Recent studies, however, indicate that the phenomenon is displayed in many other sedimentary basins encompassing lithologies and sedimentary environments unlike those of the Gulf Coast. These include various Rocky Mountain and Mid-Continent basins, onshore and offshore Californian, Alaskan and Pacific Coast basins, and other isolated occurrences. Of this group, two prime target areas, based on the indicated methane content of geopressured formation waters, would include the Cambrian sands of the Rome trough in West Virginia and selected Miocene sediments along the west side of the San Joaquin Valley in California. GROUND-WATER HYDROLOGY OF THE DADE CITY AREA, PASCO COUNTY, FLORIDA, WITH EMPHASIS ON THE HYDROLOGIC EFFECTS OF PUMPING FROM THE FORIDIAN AQUIFER

C. H. Tibbels, Warren Anderson, and C. P. Laughlin 1980 73 p refs Prepared jointly with the Southwest Florida Water Management District, Brooksville
(PB81-226518; USGS/WRD/WRI/81-058; USGS/WRI-80-33) Avail: NTIS HC A04/MF A01 CSCL 08H

Of the approximation 32 million gallons per day pumped from the Floridan aquifer in the area in 1975, about 16 million gallons per day were pumped from an area of about 0.25 square miles by Lykes-Pasco Packing Company, a citrus processing plant. There are essentially two producing zones in the Floridan aquifer in the Dade City area. The upper zone is from about 10 feet above to about 150 feet below National Geodetic Vertical Datum of 1929, and the lower zone from about 300 to about 500 feet below NGVD of 1929. There is evidence of hyraulic intefconnection of the upper and lower zones of the Floridan aquifer. This appears to be highly significant in terms of the geohydrology of the Floridan aquifer in the area, particularly with regard to its ground-water flow pattern, water quality, and aquifer hydraulic characteristics. GRA

WATER RESOURCES OF UPPER SEPARATION CREEK BASIN, SOUTH-CENTRAL WYOMING Final Report

L. R. Larson and Everett A. Zimmerman Apr. 1981 77 p refs
(PB81-224263; USGS/WRD/WRI/81-060; USGS/WRI-80-85) Avail: NTIS HC A05/MF A01 CSCL 08H

The water resources of the small basin (85 square miles) were examined before the expected start of large-scale coal mining. Streamflow was intermittent, resulting primarily from snowmelt and rainstorms. Average annual runoff was estimated at 2,500 acre feet. The 1976 runoff was 2,040 acre feet. The near absence of snowpack in 1977 resulted in greatly reduced runoff, less than 300 acre feet. Ground water is obtainable from the Mesaverde Formation, the Lance and Fort Union Formations, and from alluvium. Yields from most wells and springs are less than 10 gallons per minute. Dissolved-solids concentrations in Separation Creek ranged from less than 100 to more than 1,500 milligrams per liter during 1976. Daily mean sediment concentration ranged from 34 to 11,900 milligrams per liter. GRA

HYDROLOGIC RECONNAISSANCE NEAR FOURTH OF JULY CREEK, SEWARD, ALASKA Final Report

Gordon L. Nelson Apr. 1981 14 p refs Prepared in cooperation with the Kenai Peninsula Borough, Alaska
(PB81-223752; USGS/WRI-81-21; AK-06250;
USGS/WRD/WRI/81-056) Avail: NTIS HC A02/MF A01 CSCL 08H

The 1.3-square-mile alluvial fan of Fourth of July Creek is being developed as an industrial area and port. Fourth of July Creek is a glacier-fed stream that occupies a braided channel near the middle of the fan. The presence of glacial flour during the summer and low discharge during the winter make streamflow a poor source of water for municipal and industrial use. Water infiltrates the fan from streams and precipitation and recharges an unconfined alluvial aquifer. Average recharge is 40-50 cubic feet per second, and ground water flows toward the coast where it discharges in springs and a 0.3-mile gaining reach of the creek. Properties and concentrations of all measured chemical constituents of water samples from two wells were less than the maximum amounts recommended for drinking water. Both the aquifer and the overlying unsaturated materials are coarse grained. GRA

FLOW ROUTING IN THE SUSQUEHANNA RIVER BASIN: PART 4 - ROUTING RESERVOIR RELEASES IN THE EASTERN SUSQUEHANNA RIVER BASIN IN NEW YORK STATE Final Report, 1942 - 1977

Thomas J. Zembruzuski, Jr. 1981 38 p refs Prepared in cooperation with the Susquehanna River Basin Commission
(PB81-221533; USGS/WRI-80-117;
USGS/WRD/WRI-81-054) Avail: NTIS HC A03/MF A01 CSCL 08H

Flow-routing models were developed for six reaches of major streams in the eastern Susquehanna River basin in New York State and were used to trace releases of water from East Sidney Lake and Whitney Point Lake to gaged points downstream. Daily streamflow from 1942-77 was modeled for the following reaches: Susquehanna River--Unadilla to Conklin, Conklin to Vestal, and Vestal to Waverly; Chenango River--Sherburne to Greene and Greene to Chenango Forks; Tioughnioga River--Cortland to Itaska. The models were developed with convolution techniqes and were based on the unit-response method of flow routing, assuming the diffusion analogy and usin multilinearization. Overall accuracy of the models, as measured by the average difference between observed and simulated daily flos oer the base period was within the stated accuracy of published gaging-station records used. GRA

GEOLOGY AND HYDROLOGY FOR ENVIRONMENTAL PLANNING IN MARQUETTE COUNTY, MICHIGAN Final Report

F. R. Twenter Feb. 1981 53 p refs Prepared in cooperation with Michigan Dept. of Natural Resources
(PB81-221467; USGS/WRI-80-90; USGS/WRD/WRI-81-053) Avail: NTIS HC A04/MF A01 CSCL 08H

Marquette County, in the glaciated area of the upper peninsula of Michigan, includes 1,878 square miles. Precipitation averages 32 inches per year. Bedrock and glacial deposits contain materials that are good aquifers. Sedimentary bedrock units generaly yield sufficient water for domestic supply and, in places, may yield more than 100 gallons per minute to large diameter wells. In the glacial deposits, sand and gravel beds are the principal aquifers; yields to wells range from less than 10 to 200 gallons per minute. Igneous and metamorphic rocks yield little or no water to wells. GRA

ENERGY PROGRAMS AT THE JOHNS HOPKINS UNIVERSITY APPLIED PHYSICS LABORATORY Quarterly Progress Report, Jan. - Mar. 1981

R. vonBriesen, J. E. Tillman, F. C. Paddison, C. S. Leffel, Jr., and S. Kane Apr. 1981 44 p refs
(Contracts DOE-EX-76-A-36-1008; DE-A101-79ET-27025)
(PB81-218141; JHU/APL/EQR/81-1) Avail: NTIS HC A03/MF A01 CSCL 08G

The laboratory is engaged in developing energy resources, utilization concepts, and monitoring and storage methods. The report is divided into three sections. The first, geothermal energy development planning and technical assistance, contains reports on the progress of geothermal related tasks on which effort was concentrated during the quarter. The second section, siting of critical facilities, contains reports on geologic investigations in western Connecticut and areas in adjacent New york, development of seismotectonic domains, and fracture permeability in siting hazardous waste repositories. The third section, energy conservation and storage techniques, reports on institutional barriers to landfill methane recovery and the need for state legislation. T.M.

A METHOD FOR USING AERIAL PHOTOS IN DELINEATING HISTORIC PATTERNS OF BEACH ACCRETION AND RETREAT

Dennis Hwang Dec. 1980 50 p refs
(Contract NA79AA-D-00085)
(PB81-223836; UNIHI-SG-CR-81-04; NOAA-81042706) Avail: NTIS HC A03/MF A01 CSCL 08C

A method is presented with a maximum estimated error of about 12 feet for measuring beach changes. This is believed to be an accurate estimate, as indicated by a comparison of field and photographic measurements and by the consistent distances obtained for nearby sections of the beach in the Kailua pilot study. The methods described in this report were applied for a pilot study of Kailua Beach. GRA

COAL MINE HAZARD DETECTION USING SYNTHETIC PULSE RADAR Open File Report, 7 Jun. 1979 - 4 Dec. 1980

James C. Fowler, Steven D. Hale, and Richard T. Houck Jan. 1981 87 p refs
(Contract DI-BM-H0-292025)
(PB81-224412; BM-OFR-79-81) Avail: NTIS HC A05/MF A01 CSCL 08I

The work was conducted in three phases. The first was an analysis of the type of errors that might cause problems, the second was to build a breadboard radar, and the third was to conduct a field test with the system. The work from each phase is discussed and the results of the field tests are presented. The results show propagation of the radar signal through 200 feet of coal along with reflections from 50 feet away. The final section contains recommendations of future development. GRA

TEMPERATURE AND SOLUTE-TRANSPORT SIMULATION IN STREAMFLOW USING A LAGRANGIAN REFERENCE FRAME

Harvey E. Jobson Mar. 1981 187 p refs

(PB81-225757; USGS/WRI-81-2; USGS/WRD/WRI/81-066) Avail: NTIS HC A09/MF A01 CSCL 08H

The solution approach to the convective-diffusion equation uses a moving reference frame (Lagrangian) which greatly simplifies the mathematics of the solution procedure and dramatically reduces errors caused by numerical dispersion. The model documentation is presented as a series of four programs of increasing complexity. the conservative transport model can be used to route a single conservative substance, such as dye through a reach of a river. The simplified temperature model predicts water temperature in rivers using only equilibrium temperature and windspeed as meteorological input. GRA

INVESTIGATION OF DIRECT SOLAR-TO-MICROWAVE ENERGY CONVERSION TECHNIQUES Final Report

N. E. Chatterton, T. K. Mookherji, and P. K. Wunsch Jan. 1978 107 p refs

(Contract NAS8-32643)

(NASA-CR-161883; ESD-78-MSFC-2174) Avail: NTIS HC A06/MF A01 CSCL 10A

Identification of alternative methods of producing microwave energy from solar radiation for purposes of directing power to the Earth from space is investigated. Specifically, methods of conversion of optical radiation into microwave radiation by the most direct means are investigated. Approaches based on demonstrated device functioning and basic phenomenologies are developed. There is no system concept developed, that is competitive with current baseline concepts. The most direct methods of conversion appear to require an initial step of production of coherent laser radiation. Other methods generally require production of electron streams for use in solid-state or cavity-oscillator systems. Further development is suggested to be worthwhile for suggested devices and on concepts utilizing a free-electron stream for the intraspace station power transport mechanism. S.L.

PROCESSING OF SILICON SOLAR CELLS BY ION IMPLANTATION AND LASER ANNEALING Final Report

J. A. Minnucci, K. W. Matthei, and A. C. Greenwald Feb. 1981 78 p refs

(Contract NAS3-21276)

(NASA-CR-165283; FR-10066) Avail: NTIS HC A05/MF A01 CSCL 10A

Methods to improve the radiation tolerance of silicon cells for spacecraft use are described. The major emphasis of the program was to reduce the process-induced carbon and oxygen impurities in the junction and base regions of the solar cell, and to measure the effect of reduced impurity levels on the radiation tolerance of cells. Substrates of 0.1, 1.0 and 10.0 ohm-cm float-zone material were used as starting material in the process sequence. High-dose, low-energy ion implantation was used to form the junction in n+p structures. Implant annealing was performed by conventional furnace techniques and by pulsed laser and pulsed electron beam annealing. Cells were tested for radiation tolerance at Spire and NASA-LeRC. After irradiation by 1 MeV electrons to a fluence of 10 to the 16th power per sq cm, the cells tested at Spire showed no significant process induced variations in radiation tolerance. However, for cells tested at Lewis to a fluence of 10 to the 15th power per sq cm, ion-implanted cells annealed in vacuum by pulsed electron beam consistently showed the best radiation tolerance for all cell resistivities. DEVELOPMENT OF BATTERY SEPARATOR COMPOSITES Final Report, Oct. 1976 - Nov. 1981

George F. Schmidt and Robert E. Weber Nov. 1981 56 p refs

(Contract NAS3-20583)

(NASA-CR-165508) Avail: NTIS Hc A04/MF A01 CSCL 10C

Improved inorganic-organic separators developed by NASA were commercially prepared. A single-ply asbestos substrate was developed, as well as alternative substrates based on cellulose and on polypropylene fibers. The single-ply asbestos was bound with butyl rubber and was functionally superior to the formerly used polyphenylene oxide saturated sheet. Commercially prepared separators exhibited better measured separator properties than the NASA standard. Cycle life in Ni/Zn and Ag/Zn cells was related to substrate, decreasing in the order; asbestos > cellulose paper > nonwoven polypropylene. The cycle life of solvent-coated separators was better than aqueous in Ni/Zn cells, while aqueous coatings were better in Ag/Zn cells. T.M.

THE EFFECTS OF IMPURITIES ON THE PERFORMANCE OF SILICON SOLAR CELLS

K. A. Yamakawa 1 Sep. 1981 75 p refs
(Contracts NAS7-100; EX-76-A-29-1012; DE-AI01-76ET-20356)
(NASA-CR-164945; JPL-Pub-81-76; DOE/JPL-1012-57) Avail: NTIS HC A04/MF A01 CSCL 10A

The major factors that determine the tolerable concentrations of impurities in silicon feedstock for solar cells used in power generation are discussed in this report. It is concluded that a solar-grade silicon can be defined only for a specific manufacturing process. It is also concluded that it is the electrical effects, efficiency and resistivity, that are dominant in determining tolerable concentrations of impurities in the silicon feedstock. Crystal growth effects may become important when faster growth rates and larger crystal diameters are developed and used. Author

IRRIGATION MARKET FOR SOLAR THERMAL PARABOLIC DISH SYSTEMS

Hamid Habib-agahi and Sue Campbell Jones 1 Sep. 1981 40 p refs
(Contracts NAS7-100; DE-AT04-81AL-16228)
(NASA-CR-164955; JPL-Pub-81-85; DOE/JPL-1060-49) Avail: NTIS HC A03/MF A01 CSCL 10A

The potential size of the onfarm-pumped irrigation market for solar thermal parabolic dish systems in seven high-insolation states is estimated. The study is restricted to the displacement of three specific fuels: gasoline, diesel and natural gas. The model was developed to estimate the optimal number of parabolic dish modules per farm based on the minimum cost mix of conventional and solar thermal energy required to meet irrigation needs. The study concludes that the potential market size for onfarm-pumped irrigation applications ranges from 101,000 modules when a 14 percent real discount rate is assumed to 220,000 modules when the real discount rate drops to 8 percent. Arizona, Kansas, Nebraska, New Mexico and Texas account for 98 percent of the total demand for this application, with the natural gas replacement market accounting for the largest segment (71 percent) of the total market. SECONDARY AND COMPOUND CONCENTRATORS FOR PARABOLIC DISH SOLAR THERMAL POWER SYSTEMS

L. D. Jaffe and P. T. Poon 15 Apr. 1981 47 p refs Sponsored in part by DOE
(Contract NAS7-100)
(NASA-CR-164960; JPL-Pub-81-27; DOE/JPL-1060-43) Avail: NTIS HC A03/MF A01 CSCL 10A

A secondary optical element may be added to a parabolic dish solar concentrator to increase the geometric concentration ratio attainable at a given intercept factor. This secondary may be a Fresnel lens or a mirror, such as a compound elliptic concentrator or a hyperbolic trumpet. At a fixed intecept factor, higher overall geometric concentration may be obtainable with a long focal length primary and a suitable secondary matched to it. Use of a secondary to increase the geometric concentration ratio is more likely to e worthwhile if the receiver temperature is high and if errors in the primary are large. Folding the optical path with a secondary may reduce cost by locating the receiver and power conversion equipment closer to the ground and by eliminating the heavy structure needed to support this equipment at the primary focus. Promising folded-path configurations inclue the Ritchey-Chretien and perhaps some three element geometries. Folding the optical path may be most useful in systems that provide process heat. Author

SOLAR CELL DEVELOPMENT FOR THE POWER EXTENSION PACKAGE

Cosmo R. Baraona and James L. Cioni (NASA, Johnson Space Center) 1981 8 p refs Presented at the 16th Intersoc. Energy Conversion Conf., Atlanta, 9-14 Aug. 1981
(NASA-TM-82685; E-922) Avail: NTIS HC A02/MF A01 CSCL 10A

The PEP is a 32 kilowatt flexible substrate, retrievable, solar array system for use on the Space Shuttle. Solar cell costs will be reduced by increasing cell area and simplifying cell and coverglass fabrication processes and specifications. The cost goal is to produce cells below $30 per watt. Two and ten ohm-cm silicon cells were investigated. In phase I of the cell development program a few thousand candidate cells will be produced and evaluated for utility and quality. In phase II a large number of cells will be fabricated to verify production readiness and cell yields and costs. This schedule is compatible with PEP initial operational capability in 1984. Approximately 140,000 large area (5.9 x 5.9 cm) cells will be required for two PEP solar arrays. The status of the cell development and testing, including a radiation damage test and side-by-side comparison of candidate cell types with pre- and post-irradiation airplane calibration of outer space short-circuit current, is reported. T.M.

(Contract N60921-81-C-0084)
(AD-A104326) Avail: NTIS HC A03/MF A01 CSCL 10/3

The lithium/sulfur dioxide primary electrochemical cell has received considerable attention as a high energy power source in the last decade. However, during the same time a number of safety hazards have been associated with its use. This report is the initial part of a research-oriented investigation intended to identify and document present Li/SO2 safety hazards, then to identify the chemical reactions responsible for these hazards, and finally to investigate methods of controlling them. This report presents the results of a survey of the safety hazards associated with Li/SO2 cells. The report documents specific safety incidents experienced with Li/SO2 cells, presents some of the causes identified or postulated for the incidents, and identifies general aspects of Li/SO2 use presently believed to be potentially hazardous. The survey was carried out by reviewing safety studies and reports of safety incidents appearing in the literature and by gathering unpublished information of the experiences of users of Li/SO2 cells in both government and industry. The results of the report can serve as basis for deciding which aspects of the Li/SO2 safety hazard at present need further investigation. GRA

(Contract DE-AC02-77CH-00178)
(DE81-026219; SERI/PR-9296-T1) Avail: NTIS HC A03/MF A01

Photoluminescence spectral measurements on 6000 nm thick reactive sputtered CdS coatings yielded exciton and green edge emission spectra which are similar in their general character to those recorded from the evaporated CdS that yields high performance cells. All-sputter-deposited cells with composite doped and undoped CdS layers yielded J/sub sc/ approx. 3 mA/cm(2). This Cu2S reactive sputtering experiments further elucidated the influence of cathode and wall conditioning on the deposition process. The resistivities of CdS coatings deposited using the planar magnetron are typically a factor of from three to ten lower than for coatings deposited using the cylindrical magnetrons. DOE

A weather station was maintained from April 1978 to April 1980. Daily totals of direct normal and global insolation are given, and an hour-by-hour printout of direct normal, global, and diffuse solar radiation for the entire two year period is included. A number of studies were conducted, including daylighting, energy conservation and management, design tradeoffs, and landscaping. The collector selection process included the writing of specifications, providing design data, reviewing the various collector designs, inspecting potential vendor facilities, monitoring on-site tests, and the final selection. A simulation was made of the entire system, including both an electrical and thermal simulation of the photovoltaic array and a thermal simulation of the various buildings. Example printouts of the simulations are included.

HC A02/MF A01

Amorphous boron-silicon-hydrogn (a-B:Si:H) alloys were used to make heterojunction contacts to hydrogenated amorphous silicon (a-Si:H) films. The performance of a-B:Si:H/a-Si:H heterojunction cells are limited mainly by a large density of interface states. Another p-type, wide bandgap material, microcrystalline silicon-carbon-hydrogen (M-Si:C:H) was investigated. Three techniques are explored for production of m-Si:C:H films: glow discharge deposition, thermal annealing of a-Si:C:H films, and laser annealing of a-Si:C:H: films.

OPTICAL TRANSPARENCY OF INEXPENSIVE SALT SOLUTIONS FOR CONSTRUCTION OF DENSITY-GRADIENT PONDS

John D. Webb Jul. 1981 54 p refs
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-030832; SERI/RR-641-615) Avail: NTIS
HC A04/MF A01

A laboratory testing protocol was developed that will permit a comparative evaluation of the optical performance of candidate salts for use in stabilizing solar ponds. Extinction coefficients measured for the salts and for water in dual-beam spectrophotometer fitted with 10-cm quartz sample cells were input to a digital model that convolutes a solar spectrum with an assumed salt/water concentration gradient similar to that to be established in the solar pond. The model determined the fraction of available solar energy transmitted to the pond storage layer. This information was used to estimate the size of the pond needed to meet a given set of thermal demands if the candidate salt were to be used.

SOLAR ENERGY SYSTEM PERFORMANCE EVALUATION: FOREST CITY DILLON, WASHINGTON, D.C., JANUARY 1980 - DECEMBER 1980

D. W. Missal 1980 82 p refs
(Contract DE-AC02-79CS-30027)
(DE81-028174; SOLAR/1041-81/14) Avail: NTIS
HC A05/MF A01

An active solar energy system consisting of single glazed flat plate collectors, 3200 gallons of storage liquid, and an auxiliary oil fired boiler, was designed to supply 59% of the hot water demand for a high rise apartment building. The annual solar fraction predicted by the f chart simulation was 37%, and the solar fraction measured was 32%. Other measures of performance, including solar system coefficient of performance, are given. The performance of the collector, storage, and domestic hot water subsystems is discussed.

ADVANCED SELENIDE THERMOELECTRIC DEVELOPMENT PROGRAM Final Report

W. R. Seetoo 20 Jul. 1981 40 p
(Contract DE-AC01-80ET-32075)
(DE81-027823; TES-32075-107) Avail: NTIS
HC A03/MF A01

The segmentation of copper silver selenide and TAGS production of CuAgSe powder by rapid solidification was demonstrated. The hot junction temperature was 7250C with the segmentation temperature of 4000C, both temperatures were selected to prevent excessive sublimation from the hot ends of the segments, respectively. The CuAgSe that was used to fabricate the test hardware was synthesized. Both the CuAgSe and TAGS were hot pressed in an argon atmosphere then the segments were furnacebonded to each other. DOE

(Contract DE-AC04-76DP-00789)
(DE81-030986; SAND-81-7014-Vol-3) Avail: NTIS HC A10/MF A01

Basic system data sheets, which include project title and location, prime contractor, PV system general description, and energy storage capacity, are shown for 29 intermediate PV systems and 19 residential PV systems. In addition, cost data and output reports generated by TB and A's PV installation cost models are included for 10 intermediate systems and 10 residential systems. DOE

N82-11568# Sandia Labs., Livermore, Calif.
STUDY OF PHOTOVOLTAIC COST ELEMENTS. VOLUME 4: INSTALLATION COST MODEL FOR RESIDENTIAL PV SYSTEMS: USERS MANUAL Final Report
James B. Ayers Jul. 1981 89 p Prepared in cooperation with Barry (Theodore) and Associates, Los Angeles 5 Vol.
(Contract DE-AC04-76DP-00789)
(DE81-031921; SAND-81-7014-Vol-4) Avail: NTIS HC A05/MF A01

A quantitative methodology is presented for estimating installation costs of residential photovoltaic systems. The installation cost model for residential PV systems is comprised of 144 estimating equations selectively exercised, based on user definition of the system. At the input stage, residential PV systems can be fully described by 9 design option categories and 9 system specification categories. All assumptions were validated with installers of solar thermal systems. A discussion of the model is included as well as an example of its use with an 8 KW PV system for a Southwest all-electric residential design. DOE

FLUID-BED HEAT-EXCHANGER OPTIMIZATION AND BED MATERIALS SELECTION Final Report
Feb. 1981 127 p refs
(Contracts DE-AC22-78ET-11343; DE-AC03-79ET-11343; ET-78-C-03-2039)
(DOE/ET-11343/T2; Rept-8100-FB-0003) Avail: NTIS HC A07/MF A01

The effect of material properties on heat exchanger costs for waste gas streams from 500 to 30000F was evaluated. The cost of the major heat exchanger components was identified and related directly to bed material properties. Two hundred materials were reviewed: metals, alloys, oxides, minerals, carbides, borides, intermetallics, and cermets. It is shown that the oxides and minerals were the most cost effective at the lower bed temperatures and the metallic bed materials at the higher bed temperature. DOE

PRELIMINARY EVALUATION OF ADVANCED COAL-BASED ELECTRICITY-GENERATING TECHNOLOGIES BY MEANS OF SYSTEM-INTEGRATION ANALYSIS
J. L. Gillette and K. Hub Apr. 1981 41 p refs
(Contract W-31-109-eng-38)
(DE81-029989; ANL/EES-TM-144) Avail: NTIS HC A03/MF A01

The potential effects of coal fired cogeneration on production requirements were examined. Two types of cogeneration designs, a backpressure turbine and an extraction turbine were studied. It is found that some savings of oil can be realized with coal based cogeneration, and that the quantity of such is dependent on the purchase option, the demand growth rate, and the cogenerator design. It is concluded that of the two designs the backpressure turbine type has an advantage due to its significantly lower heat rate. DOE

ENERGY ANALYSIS OF HUMAN ECOSYSTEMS IN AN APPALACHIAN COAL COUNTY
A. P. Watson 1980 31 p refs Presented at the Intern. Symp. on the Human Side of Energy, Laramie, Wyo., 7-9 Jul. 1981
(Contract W-7405-eng-26)
(DE81-025177; CONF-8007107-2) Avail: NTIS HC A03/MF A01

Preliminary results from a energy analysis of the coal fuel cycle in an Appalachian coal county has provided systematic assessment of hidden energy subsidies in extraction, transport, processing, and combustion. Current results indicate a major loss due to depletion of the coal resource base by use of inefficient mining techniques. Although of smaller magnitude, reductions in work force and community productivity from occupational accidents and disease and road maintenance requirements for transport also appear to be significant. DOE

IMPURITY EFFECTS IN a-Si:H SOLAR CELLS
A. E. Delahoy and R. W. Griffith 1981 10 p refs Presented at 15th IEEE Photovoltaic Specialists Conf., Orlando, Fla., 12-15 May 1981
(Contract DE-AC02-76CH-00016)
(DE81-025069; BNL-29668; CONF-810526-38) Avail: NTIS HC A02/MF A01

The deleterious effects on device performance of phosphine and monochlorosilane are discussed. Solar cells fabricated using plasma deposited a-Si:H alloys can be degraded by the incorporation of certain impurities during deposition of the a-Si:H materials. Nominally intrinsic layers are adversely affected by the addition to the plasma of air, N2 + O2 mixtures, PH3 or SiH3Cl (monochlorosilane). Modification of the a-Si:H gap state density owing to synergistic effects of oxygen and nitrogen in the plasma leads to a collapse of the space charge region and the reduction of the micro tau product for holes. DOE

DESIGN, COST AND PERFORMANCE COMPARISONS OF SEVERAL SOLAR THERMAL SYSTEMS FOR PROCESS HEAT. VOLUME 1: EXECUTIVE SUMMARY
Patrick J. Eicker, Ernest D. Eason, Joe D. Hankins, Larry D. Hostetler, Joseph J. Iannucci, and James B. Woodward Mar. 1981 24 p refs
(Contract DE-AC04-76DP-00789)
(DE81-029881; SAND-79-8279-Vol-1) Avail: NTIS HC A02/MF A01

Conceptual designs of central receiver, parabolic dish, and parabolic trough systems for several process heat applications were analyzed. Cost and performance estimates are made for each of these designs and used to calculate levelized delivered process heat costs. This indicated that central receiver systems will provide energy costs competitive with that afforded by the parabolic trough and parabolic dish systems over the range of demand sizes and temperatures studies. DOE

RECENT ADVANCES IN LEAD-ACID CELL RESEARCH AND DEVELOPMENT

Ernst Voss 1980 38 p refs Presented at the EVA Conf., Adelia, Australia, 25-29 Aug. 1980 Sponsored in part by Bundesministerium fuer Forschung und Technologie Prepared for Argonne National Lab., Ill.
(Contract W-31-109-eng-38)
(DE81-023104; CONF-8008118-1) Avail: NTIS HC A03/MF A01

During the last decade it was demonstate that the lead-acid system is capable of proving an attractive energy source of sufficient energy and power per unit weight and volume which allows its sucessful application for electric vehicle propulsion. This is shown by a number of typical examples, such as the relationship between active-material properties and capacity at high rates of discharge the effect of acid stratification and others. Simultaneously, the expenditure for the maintenance of lead-acid batteries was minimized by the development of peripheric equipment, as there are means for central-automatic water refill and recombination devices. It is shown that there is still a considerable potential for further improvement which might again strengthen the unique position of the lead-acid system in the market in comparison to competitive systems. OXYGEN REDUCTION ON CARBON-SUPPORTED PLATINUM FUEL-CELL ELECTRODES IN H SUB 3 PO SUB 4

J. McBreen, H. Lender, and S. Srinvasan 1981 11 p refs Presented at the Symp. on Electrocatalysts, Minneapolis, 10-15 May 1981; sponsored by Electrochemical Society, Inc.
(Contract DE-AC02-76CH-00016)
(DE81-027303; BNL-29788; CONF-8105105-2) Avail: NTIS HC A02/MF A01

The reduction of oxygen on carbon supported fuel cell electrodes was investigated in phosphoric acid electrolytes in the concentration range of 85% to 101% and at temperatures from 25 to 180 C. In purified acid the Tafel slope in the potential region of 0.7 to 0.9 V RHE is approx. 120 mV/decade and is invariant with temperature. The activation energy for oxgyen reduction is between 8 kcal and 13 kcal/mole. In impure 101% electrolyte the Tafel slope increases from a value of 85 mV/decade at 80 C to 105 mV/decade at 180 C and the activation energy is 18.29 kcal/mole. The major discrepancies in the literature can be rationalized on the basis of impurity effects. In pure electrolytes, the kinetic parameters on smooth platinum and high area carbon supported platinum are the same. DOE

N82-11583# Brookhaven National Lab., Upton, N. Y. Dept. of Energy and Environment.

SOLAR HEAT PUMP SIMULATOR

M. A. Caten 1981 5 p refs Presented at the Active Solar Contractors' Rev. Meeting, Washington, D.C., Sep. 1981
(Contract DE-AC02-76CH-00016)
(DE81-024368; BNL-29678; CONF-810912-3) Avail: NTIS HC A02/MF A01

A simulator was utilized to provide controlled-temperature sources and sinks to an experimental water-to-water laboratory heat pump test bed. This combination was used to demonstrate and explore the potential of the vapor-compression cycle to deliver high COP's at SAHP source temperatures. Results from the simulator were used in computer simulations of complete systems performed by BNL, by the SAHP contractors, and by others. A two-speed compressor was first tested at high source temperatures on the BNL simulator. In view of the decision by both contractors to construct water-to-air (rather than water-to-water) heat pumps, the BNL simulator was fitted with an air-side test loop. The prototype heat pump was tested under steady-state conditions on the BNL simulator. DOE

LIGHT-COMMERCIAL BRAYTON/RANKINE SPACE-CONDITIONING SYSTEM

David Friedman, Kenneth Trester, and Wiley Cowell 1981 7 p ref Presented at the DOE Heat Pump Contractors' Program Integration Meeting, McLean, Va., 2-4 Jun. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-024137; CONF-810672-6) Avail: NTIS HC A02/MF A01

A heat-actuated space conditioning system that provides more efficient use of natural gas developed for 26.4- to 87.8-kW-(7.5- to 25-ton) commercial applications is described. The system consists of a subatmospheric naturalgas-fired, Brayton-cycle engine that drives a Rankine-cycle heat pump. A centrifugal Freon compressor is driven directly from the Brayton engine rotating group thorugh a permanent-magnet coupling. Unique features that offer high life-cycle performance include a hermetically sealed magnetic coupling, air foil bearings, an atmospheric in-line combuster, and a high-temperature recuperator. Predicted overall engine efficiency is 27% and predicted overall coefficient of performance (COP) at he energy source is 1.0 in cooling and 1.2 heating. Cycle description system performance predictions, energy savings and payback cost analysis, hardware development, and the program status are discussed. DOE

IS GEOTHERMAL SIMULATION A CATASTROPHE?

V. V. Nguyen and George F. Pinder 1980 5 p refs Presented

at 6th Ann. Workshop on Geothermal Reservoir Engr., Stanford, Calif., 16-18 Dec. 1980
(DE81-026750; CONF-801233-10) Avail: NTIS HC A02/MF A01

All numerical simulators of geothermal reservoirs depend upon an accurate representation of the thermodynamics of steam-water systems. These relationships are required to render tractable the system of balance equations derived from the physics of flow through porous media. While it is generally recognized that steam-water system (i.e., two phase) is not thermodynamic equilibrium, equilibrium thermodynamics are employed in its description. An alternative view based on non-equilibrium thermodynamics is presented. The underpinnings of this approach are found in a branch of topology generally referred to as catastrophe theory. DOE

N82-11589# Brookhaven National Lab., Upton, N. Y. National Center for Analysis of Energy Systems.
MODELING ENERGY-CONSERVATION POTENTIALS OF COMMUNITY ENERGY-SYSTEM TECHNOLOGIES
Peter I. Kleeman 1981 8 p refs Presented at 12th Ann. Pittsburg Conf. on Modeling and Simulation, 30 Apr. - 1 May 1981
(Contract DE-AC02-76CH-00016)
(DE81-026059; BNL-29720; CONF-810477-2) Avail: NTIS HC A02/MF A01

A mathematical model is presented for estimating energy-conservation potentials of community-energy-system technologies in meeting community energy service demands. The model is formulated to identify optimal community composition, technology choices, and fuel use under various fuel price, energy service demand, and other system-parameter assumptions. DOE

N82-11590# Franklin Associates, Prairie Village, Kans.
PRELIMINARY DEVELOPMENT OF A TECHNIQUE FOR ESTIMATING MUNICIPAL-SOLID-WASTE GENERATION
Jun. 1981 84 p refs
(Contract DE-AC01-78CE-24390)
(DE81-024152; DOE/CE-24390/1) Avail: NTIS HC A05/MF A01

The data obtained revealed detailed generation quantities by collection route for defined areas of the cities. These data were then used to test various predictive factors. The end result of the analysis is a provisional method for estimating residential solid-waste generation by relating it to income data readily available from government documents, and a provisional method for estimating commercial solid waste generation by relating it to readily available retail sales data. The analysis of the data obtained has resulted in a residential solid-waste estimation technique that can be applied to virtualy any city or region of interest. The general approach consisted of: data collection from selected solid waste jurisdictions, the determination of devographic and socioeconomic data for each solid waste jurisdiction, and data analysis. Each stage is discussed. DOE

N82-11591# Los Alamos Scientific Lab., N. Mex.
ADVANCED DEVELOPMENT OF ELECTRICAL-ENERGY-STORAGE COMPONENTS FOR HIGH RELIABILITY APPLICATIONS
K. J. Bickford, G. H. Mauldin, and W. J. Sarjeant 1981 5 p refs Presented at the 3rd IEEE Intern. Pulsed Power Conf., Albuquerque, N. Mex., 1 Jun. 1981
(Contract W-7405-eng-36)
(DE81-025384; LA-UR-81-1671; CONF-810659-15) Avail: NTIS HC A02/MF A01

This program was undertaken in order to study the following: design and fabrication of prototype test capacitors; dc partial discharge analysis; repetitive charge-discharge life testing; theoretical and experimental analysis; and computer modeling. A brief overview of each of these program elements is presented. DOE

N82-11592# California Univ., Berkeley. Energy and Environment Div.
INTERNATIONAL COMPARISON OF RESIDENTIAL ENERGY USE: INDICATORS OF RESIDENTIAL ENERGY USE AND EFFICIENCY. PART 1: THE DATA BASE
Lee Schipper, Andrea Ketoff, and Stephen Meyers May 1981 129 p refs
(Contract W-7405-eng-48)
(DE81-028550; LBL-11703) Avail: NTIS HC A07/MF A01

Information is presented on the end-uses of energy in the residential sector of seven major OECD countries over the period 1960-1978. Data are presented on energy consumption by energy type and end-use for three to five different years for each country. Each year table is complemented by a set of indicators, which are assembled for the entire 20-year period at the end of each country listing. Finally, a set of key indicators from each country is displayed together in a table, allowing comparison for three periods: early (1960-63), pre-embargo (1970-73), and recent (1975-78). DOE

CONTROLS FOR SOLAR HEATING AND COOLING
M. Warren, Steven Schiller, and Michael Wahlig Jun. 1981 4 p refs Presented at the Active Solar Contractors' Rev. Meeting, Washington, D.C., Sep. 1981
(Contract W-7405-eng-48)
(DE81-025209; LBL-12751; CONF-810912-8) Avail: NTIS HC A02/MF A01

Solar heating system operation with two different operating strategies were run: direct collector to load heating and storage coupled heating. No significant improvement in system performance was found for the direct heating strategy. Simulation analysis of the interaction of the solar heating system with the building load and thermostat was completed. It is indicated that using a conventional room thermostat, large temperature swings can be expected when the storage tank is charged to a high temperature. DOE

N82-11594# California Univ., Berkeley. Lawrence Berkeley Lab.
OVERVIEW OF THE APPLIED BATTERY AND ELECTROCHEMICAL RESEARCH PROGRAM
F. McLarnon Jun. 1981 15 p Presented at the 4th DOE Battery and Electrochem. Contractors' Conf., Washington, D.C., 2 Jun. 1981
(DE81-027397; LBL-12690; CONF-810642-5) Avail: NTIS HC A02/MF A01

This purpose of this program is to provide the applied research base which supports all of DOE's electrochemical systems missions, and the general objective is to help provide batteries and electrochemical systems that can satisfy economic, performance and schedule requirements. The specific goal is to identify the most promising electrochemical technologies and transfer them to industry and/or another DOE program for further development and scale-up. DOE

N82-11595# California Univ., Berkeley. Lawrence Berkeley Lab.
RECHARGEABLE MOLTEN-SALT CELLS
Elton J. Cairns Oct. 1980 23 p refs Presented at the 158th Meeting of the Electrochem. Soc., 3rd Intern. Symp. on Molten Salts, Phys. Electrochem. Div., Hollywood, Fla., 5-10 Oct. 1980
(Contract W-7405-eng-48)
(DE81-027091; LBL-11090; CONF-8010159-12) Avail: NTIS HC A02/MF A01

Rechargeable molten-salt cells offer the opportunity for achieving higher specific energy than is available from ambient temperature cells (200 W-h/kg), and a specific power in excess of 100 W/kg. Two main of rechargeable cells employing molten salts are statistical those with a molten salt as the sole electrolyte, and those with a combination of a solid electrolyte and a molten salt electroylte. The status, recent research, and current problems for each of several systems in the above two categories are discussed. DOE

N82-11596# California Univ., Livermore. Lawrence Livermore Lab.
MECHANICAL ENERGY STORAGE TECHNOLOGY (MEST) DEVELOPMENT
Thomas M. Barlow 22 Jun. 1981 8 p refs Presented at the Mech., Magnetic, and Underground Energy Storage Ann. Contractors' Rev., Washington, D.C., 24-26 Aug. 1981
(Contract W-7405-eng-48)

(DE81-026800; UCRL-86297) Avail: NTIS HC A02/MF A01

The objectives, approaches, structure, and principal accomplishments of the flywheel technology program during FY 1981 are summarized. International flywheel-related technology and complementary efforts in the United States are reviewed. DOE

N82-11597# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

INTERFACE REACTIONS IN Mg/Zn3P2 SOLAR CELLS

L. L. Kazmerski, P. J. Ireland, and A. Catalano (Inst. of Energy Conversion) May 1981 5 p refs Presented at the 15th IEEE PV Spec. Conf., Orlando, Fla., 11 May 1981
(Contract DE-AC02-77CH-00178)
(DE81-025773; SERI/TP-611-1226; CONF-810526-30) Avail: NTIS HC A02/MF A01

The composition and chemistry of the Mg/Zn3P2 interface was studied using surface analysis techniques. For higher carrier concentrations (p> 10 to the 17th power/cu cm), a heterojunction occurs by the chemical interaction of the Mg with Zn3P2 to form Mg3P2. For lower carrier concentrations this reaction does not take place, and Mg diffuses into the Zn3P2. Diffusion coefficients of Mg in Zn3P2 are determined. Grain (crystalline) and grain boundary components of the diffusion coefficient are evaluated. These data compare very well with that reported using electron beam induced currents and spectral response measurements. DOE

N82-11598# Los Alamos Scientific Lab., N. Mex.

CORRELATION METHODS

J. D. Balcomb 1981 6 p refs Presented at 6th Natl. Passive Conf., Portland, Oreg., 8-12 Sep. 1981
(Contract W-7405-eng-36)
(DE81-025379; LA-UR-81-2003; CONF-810925-1) Avail: NTIS HC A02/MF A01

Correlation methods were developed to provide a quick and relatively simple technique for estimating the performance of passive solar systems. The correlations are done with respect to data generated from simulation models. The techniques and accuracies are described. Both the Solar Load Ratio and Un-Utilizability methods are described. The advantages and limitations of correlation methods as design tools are discussed. DOE

N82-11599# Los Alamos Scientific Lab., N. Mex.

TEST RESULTS AND ANALYSIS OF A CONVECTIVE LOOP SOLAR AIR COLLECTOR

Franz A. Biehl 1981 6 p refs Presented at the 6th Natl. Passive Solar Conf., Portland, Oreg., 8-12 Sep. 1981
(Contract W-7405-eng-36)
(DE81-028151; LA-UR-81-2252; CONF-810925-3) Avail: NTIS HC A02/MF A01

The purpose of the test program is to validate simulation model that can also be extended to other collector arrangements and to a variety of weather patterns. Details of the collector configurations, typical test results, simulation model, and comparison between test and analysis results are discussed. The good agreement between test and analysis suggests that the analytical model can be employed for sensitivity studies. A range of desirable collector lengths, based upon efficiency considerations, was determined employing the analytical model. DOE

N82-11600# Los Alamos Scientific Lab., N. Mex.

LONG-TERM PERFORMANCE OF THE HUNN PASSIVE SOLAR RESIDENCE

B. D. Hunn 1981 6 p refs Presented at 6th Natl. Passive Conf., Portland, Oreg., 8-12 Sep. 1981
(Contract W-7405-eng-36)
(DE81-028735; LA-UR-81-2251; CONF-810925-6) Avail: NTIS HC A02/MF A01

Detailed performance and annual energy consumption data are reported, as well as occupant observations and conclusions, for three heating seasons in the Hunn hybrid passive/active solar residenced located in Los Alamos, New Mexico. The performance data were gathered by the Los Alamos National Laboratory and include hourly storage wall and interior temperature data for a midwinter period, an interior air-temperature histogram, and measured auxiliary energy consumption and solar heating fraction for each heating season. Also, energy and cost savings over the three-year period are estimated. DOE

N82-11601# Los Alamos Scientific Lab., N. Mex.

ATTACHED SUNSPACE DESIGN ANALYSIS

Robert W. Jones and Robert D. McFarland 1981 6 p refs Presented at the 6th Natl. Passive Solar Conf., Portland, Oreg., 8-12 Sep. 1981
(Contract W-7405-eng-36)
(DE81-028738; LA-UR-81-2206; CONF-810925-2) Avail: NTIS HC A02/MF A01

The 28 sunspace reference designs are described. Note is taken of those designs (the semi-enclosed geometries) analyzed more recently than the previously published reports. The role of sensitivity studies is discussed, and some sample plots of sunspace performance sensitivity to key design parameters are presented. The monthly solar load ratio (SLR) correlations were reviewed with emphasis on the modified SLR used in the sunspace analysis. The application of the sunspace SLR correlations to monthly design analysis is outlined. DOE

N82-11602# Los Alamos Scientific Lab., N. Mex.

HEAT STORAGE DURATION

J. Douglas Balcomb 1981 6 p refs Presented at 6th Natl. Passive Conf., Portland, Oreg., 8 Sep. 1981
(Contract W-7405-eng-36)
(DE81-026635; LA-UR-81-2186; CONF-810925-4) Avail: NTIS HC A02/MF A01

Both the amount and duration of heat storage in massive elements of a passive building are investigated. Data taken or one full winter in a solar home are analzyed with the aid of subsystem simulation models. Heat storage duration is tallied into day intervals. Heat storage location is discussed and related to overall energy flows. DOE

N82-11603# Lincoln Lab., Mass. Inst. of Tech., Lexington.

PHOTOVOLTAIC OPERATIONS MANUAL RADIO STATION WBNO

D. N. Klein Mar. 1981 124 p refs
(Contract DE-AC02-76ET-20279)
(DE81-027439; DOE/ET-20279/110) Avail: NTIS HC A06/MF A01

The photovoltaic system operator is provided with the information needed to return to normal operation if the system has shut down and to maintain it in good operating condition. Appropriate safety information is provided for personal and equipment safeguarding. The site and equipment are briefly described. DOE

N82-11604# Sandia Labs., Albuquerque, N. Mex.

NON-SOLAR POWER TESTS AT THE CENTRAL RECEIVER TEST FACILITY (CRTF)

J. T. Holmes 1981 22 p refs Presented at Solar Thermal Test Facilities Users Assoc. Ann. Business and Tech. Meeting, Pasadena, Calif., 20 Apr. 1981
(DE81-026955; SAND-81-1546C) Avail: NTIS HC A02/MF A01

In addition to programs to develop central receiver technology components, r of other tests are summarized that use some of the unique capabilities of the CRTF. The three major noncentral receiver component tests have been a Navy/Applied Physics Laboratory simulation of aerodynamics heating of a missile nose-cone, a Sandia-Rockwell International gallium arsenide photovoltaic array, and a DNA/Science Applications development of a secondary beam concentrator. DOE

N82-11605# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

GROWTH OF SILICON SHEETS FROM METALLURGICAL-GRADE SILICON

T. F. Ciszek, M. Schietzelt, L. L. Kazmerski, J. L. Hurd, and B. Fernelius May 1981 9 p refs Presented at 15th IEEE Photovoltaic Specialists Conf., Orlando, Fla., 12-15 May 1981
(Contract DE-AC02-77CH-00178)
(DE81-025703; SERI/TP-611-1231; CONF-810526-32) Avail: NTIS HC A02/MF A01

Impure silicon is difficult to solidify in sheet form because of morphological proturberances which may result from constitutional supercooling. Sheet growth methods which require a spoific crystallographic orientation or which are characterized by a narrow melt meniscus are most affected by this problem. The edge-supported pulling technique was applied to sheet growth of metallurgical grade silicon and DAR (Direct Arc Reactor) silicon. The 7 mm meniscus height associated with this technique allowed the growth of 5 cm wide sheets from both materials. In each case, the sheets were p-type. DOE

N82-11606# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

USE OF SOLAR THERMAL ENERGY TO GENERATE ELECTRICITY

L. M. Murphy Jul. 1981 22 p refs Presented at Energy in the Man-built Environ.: The Next Decade Specialty Conf., Vail, Colo., 3-5 Aug. 1981; sponsored by ASME
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-028797; SERI/TP-632-1287; CONF-810808-9) Avail: NTIS HC A02/MF A01

Solar thermal electric technology is reviewed. Technical approaches which result in net solar to electric conversion efficiencies ranging from less than 1 percent to more than 20 percent are discussed. The status of the various solar thermal electric concepts and the principal areas of research for each respective concept are resited. Cost issues and prospects for the economic competitiveness of solar thermal electric systems with conventional systems are outlined. DOE

N82-11607# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

BIOLOGICALLY ASSISTED PHOTOELECTROCHEMICAL CELL

M. Seibert and Michael Kendall-Tobias Apr. 1981 5 p refs Presented at 15th AS/ISES Meeting, 26-30 May 1981
(DE81-025905; SERI/TP-623-1164) Avail: NTIS HC A02/MF A01

Chromatophore vesicles isolated from the photosynthetic bacterium Rhodospeudomonas sphaeroides were absorbed as a film on SnO2 Electrodes and examined in a photoelectrochemical cell. The photovoltage and photocurrents generated by the cell under steady-state red light irradiation were dependent on the state of the chromatophores as modified by the chemical properties of the cell electrolyte including pH, salt concentration, redox couple, and redox potential. The cell was operable in the redox range where to c2 cytochrome was reduced and the quinone pool was oxidized. Both these components are carries, in the cyclic electron transport system of bacterial photosynthesis and must control electron transport between the chromatophore membrane and the electrodes. DOE

N82-11608# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

THIN-FILM POLYCRYSTALINE SILICON SOLAR CELLS: PROGRESS AND PROBLEMS

T. Surek, A. P. Ariotedjo, G. C. Cheek, R. W. Hardy, J. B. Milstein, and Y. S. Tsuo May 1981 11 p refs Presented at 15th Photovoltaic Specialists Conf., 12-15 May 1981, Orlando, Fla.
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-025704; SERI/TP-614-1235; CONF-810526-37) Avail: NTIS HC A02/MF A01

The progress in cell research in the basic understanding of the effects of grain boundaries and the passivation of these effects was reviewed. Current concerns in this area include the scalability of the more promising approaches, the reliability and stability of the cells and modules, and an assessment of the low-cost potential of the technologies. T.M.

N82-11609# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

NATIONAL PHOTOVOLTAIC PROGRAM IN AMORPHOUS MATERIALS

Jack Stone, Ed Sabisky, Harry Mahan, Tom McMahon, and Frank Jeffrey May 1981 6 p refs Presented at the 15th Photovoltaic Specialists Conf., Orlando, Fla. 12-15 May 1981
(Contracts DE-AC02-77CH-00178; EG-77-CH-01-4042)
(DE81-025906; SERI/TP-614-1216) Avail: NTIS HC A02/MF A01

The development of high efficiency (10% goal), cost effective (15-40 cents per peak watt goal), thin film solar cells is investigated. The status of this program, other research activities, and expected near term performance improvements are summarized. DOE

N82-11610# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

ANALYSIS OF INDIUM-PHOSPHIDE/INDIUM TIN OXIDE SOLAR CELLS

T. J. Coutts (Newcastle upon Tyne Polytechnic, England), N. M. Pearsall (Newcastle upon Tyne Polytechnic, England), R. Nottenburg, P. J. Ireland, and L. L. Kazmerski May 1981 7 p refs Presented at 15th Photovoltaic Specialists Conf., Orlando, Fla., 12-15 May 1981
(Contracts DE-AC02-77CH-00178)
(DE81-025907; SERI/TP-613-1225; CONF-810526-36) Avail: NTIS HC A02/MF A01

The mechanisms that underlie the operation of p-InP/N-ITO solar cells fabricated by depositing thin films of ITO onto InP substrates by both RF sputtering and ion-beam sputtering were investigated. The RF sputtered devices behave like SIS or heterojunction cells. The ion-beam sputtered cells behave more like buried homojunction devices. It is sown that the properties of these cells depend not only on the method of fabrication, but also on several other complicating effects which occur before, during and after deposition of the ITO. DOE

N82-11611# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

OCEAN ENERGY-WAVES, CURRENTS, AND TIDES

J. Miles and B. Shelpuk May 1981 11 p refs Presented at Energy in the Man-Built Environ. Urban Planning and Develop. Div. Spec. Conf., Vail, Colo., 3-5 Aug. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-025708; SERI/TP-634-1195; CONF-81080808) Avail: NTIS HC A02/MF A01

An overview is presented on the mechanical forms of ocean energy; i.e., waves, currents, and tides. Following an introductory section on wave mechanics, each of the three forms of ocean energy is considered under the headings of the resource, device types for energy extraction, and prognosis for practical implementation. DOE

N82-11612# Midwest Research Inst., Golden, Colo. Solar Energy Research Inst.

ANALYSIS OF SOLAR DESICCANT SYSTEMS AND CONCEPTS

R. Barlow May 1981 5 p refs Presented at the Active Contractor's Rev. Meeting, Washington, D.C., Sep. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-023027; SERI/TP-631-1254; CONF-810912-6) Avail: NTIS HC A02/MF A01

The modeling of desiccant systems is described. Computer programs for predicting the performance of silica gel beds in single-blow situations and in cyclically operating desiccant cooling systems (DESSIM) are presented. The single-blow model has been validated and shows excellent agreement with experimental data. Experimental data published by Koh are shown along with the corresponding prediction using DESSIM. DOE

N82-11613# Department of Energy, Washington, D. C. Office of Policy, Planning and Analysis.

INTERRELATIONSHIPS OF ENERGY AND THE ECONOMY: A SUPPLEMENT TO THE NATIONAL ENERGY POLICY PLAN REQUIRED BY TITLE VIII OF THE US DEPARTMENT OF ENERGY ORGANIZATION ACT (PUBLIC LAW 95-91)

Jul. 1981 70 p refs
(DE81-027526; DOE/PE-0030) Avail: NTIS HC A04/MF A01

This study developed a fairly wide range of estimates for the impact of energy prices on such key variables as real gross national product, inflation, and the US trade balance. The retrospective analysis suggests that potential economic output in the near future is being affected adversely by such energy price results from the recent past as lower investment, reduced labor force participation, slower growth in labor productivity, and reduced access to real energy resources. Policies that seek to stimulate the supply side of the economy (including policies that seek to stimulate the specific development of energy resources) are directed at offsetting such past effects. 1981-90 projections are presented of the impacts upon the economy in the three energy price scenarios developed in the document Energy Projections to the Year 2000. DOE

N82-11614# Wisconsin Center for Public Policy, Madison.
SOLPLAN REPORT: AN ASSESSMENT OF BARRIERS AND INCENTIVES TO CONSERVATION AND ALTERNATIVE-ENERGY USE IN THE RESIDENTIAL SECTOR IN WISCONSIN
C. K. Fulenwider, Lonnie S. Weiss, Carol Pfefferkorn, Don E. Wiener, and Stephen E. Feldmam Mar. 1981 453 p
(Contract DE-FG02-79CS-30292)
(DOE/CS-30292/3) Avail: NTIS HC A20/MF A01

The Alternative Energy Policy Project of the Wisconsin Center for Public Policy focused upon two principle objectives: gathering the heating industry generally, the alternative-energy industry commercialization; and building consensus around alternative energy policy to develop guidelines for alternative energy policy for the state. Particular attention was paid to public involvement in the policy process and to assessing barriers and incentives from as many key sectors of the energy field as possible. Data were gathered from the general public, alternative energy users, the heating industry generally, the alternative-energy industry specifically, and key decision makers. T.M.

N82-11615# Old North Mfg. Co., Inc., Lenoir, N.C.
SOL-CYCLE: A SOLAR-ASSISTED SOLVENT-RECYCLING PROCESS FOR ASPHALT-IMPREGNATION OF FIBER BOARD
Ben E. Edwards 1 Apr. 1981 12 p
(DE81-903377; NCEI-0031) Avail: NTIS HC A02/MF A01

To conserve resources and energy in the production of Flex-Joint, an asphalt-impregnated fiber board, a manufacturing process was developed. The Sol-Cycle process provides for: (1) recycle of the solvent used in the saturation step; (2) conversion of raw to finished board in 24 hours; (3) better control of the saturation step; and (4) the use of solar energy for a part of the driving force to accomplish (1) and (2). DOE

N82-11616# South Carolina Energy Research Inst., Columbia.
RESIDUAL-ENERGY-APPLICATIONS PROGRAM: EAST-FACILITY REQUIREMENTS DOCUMENT
P. W. Yngve and F. H. Zander 31 Jul. 1981 237 p refs
(Contract DE-AC09-77ET-12866)
(DE81-027489; DOE/ET-12866/8-Vol-2) Avail: NTIS HC A11/MF A01

The objectives of the EAST facility are to perform research and development on heat energy recovery and conversion equipment; establish high confidence in system performance, system availability, and system operating, maintenance, and material costs; and provide a national competence in technologies required for the installation and operation of heat recovery systems. Detailed descriptions of seven potential test articles which represent a wide range of types and sizes of heat recovery systems were contained. EAST operations, including test planning, test policies, systems testing, and facility organization and staffing were discussed. Additionally, information is included on a preliminary site analysis for the EAST Facility and other test support system requirements are described. T.M.

N82-11617# Sandia Labs., Albuquerque, N. Mex.
PERFORMANCE TESTING OF THE TOLTEC TI-410 CONCENTRATING SOLAR COLLECTOR
V. E. Dudley (Edgerton, Germeshausen and Grier, Inc.) and R. M. Workhoven Jul. 1981 55 p refs
(Contract DE-AC04-76DP-00789)
(DE81-029994; SAND-81-0369) Avail: NTIS HC A04/MF A01

Results of tests conducted on the collector are summarized. Collector efficiency, thermal loss, and receiver differential pressure were measured at fluid temperatures from 20 C to 200 C. The collector was evaluated with a glass mirror and with an acrylic/polyester film reflector surface. Four different receiver designs were tested. DOE

N82-11618# Nevada Univ., Boulder City. Desert Research Inst.
ANALYSIS OF SATURATED SOLAR POND CHARACTERISTICS, VOLUME 1 Final Report, 1 Oct. 1979 - 30 Apr. 1981
T. Ochs, C. G. Stojanoff, Don L. Day, Eric Eckert, Jim Langeliers, and David Wruck May 1981 98 p refs
(Contract DE-AS04-79CS-30174)
(DE81-030820; DOE/CS-30174/T2-Vol-1) Avail: NTIS HC A05/MF A01

The actual phenomena taking place in a saturated solar pond are studied. Experimental procedures for solar ponds are presented. In an attempt to summarize the physical properties of salt solutions an exhaustive literature search was conducted. The basic definitions of terms and a summary of the properties of pure water are included. Data are tabulated on a number of binary aqueous solutions (one salt and water). DOE

N82-11619# Oak Ridge National Lab., Tenn. Engineering Technology Div.
OCEAN THERMAL ENERGY CONVERSION GAS-DESORPTION STUDIES. VOLUME 2: DEAERATION IN A PACKED COLUMN AND A BAROMETRIC INTAKE SYSTEM
A. Golshani and F. C. Chen Sep. 1981 64 p refs
(Contract W-7405-eng-26)
(DE81-030469; ORNL/TM-7438-Vol-2) Avail: NTIS HC A04/MF A01

After a review of previous relevant studies, the design of a gas desorption test loop and a barometric intake system are described. The results of vacuum deaeration in a packed column and a barometric intake system are presented, and the savings that can be achieved when the packed column and barometric intake system are combined are discussed. Vacuum deaeration laboratory experiments using three different kinds of packings in a packed column test section and a series of barometric intake deaeration experiments are reported. A conceptual OTEC deaeration subsystem design, based on these results, and its implications on an OTEC-open cycle power system are presented. DOE

N82-11620# Potomac Electric Power Co., Washington, D.C.
PRELIMINARY DESIGN STUDY OF UNDERGROUND PUMPED HYDRO AND COMPRESSED-AIR ENERGY STORAGE IN HARD ROCK. VOLUME 8: DESIGN APPROACHES: UPH Final Report
Jun. 1981 297 p Prepared in cooperation with Acres American, Inc., Buffalo, N.Y. Sponsored in part by Electric Power Research Inst.
(Contract DE-AC02-77ET-28013; EPRI Proj. 1081-1)
(DE81-030673; EPRI-EM-1589-Vol-8) Avail: NTIS HC A11/MF A01

The development of the design approaches used to determine the plant and overall layout for a underground pumped hydroelectric (UPH) storage facility having a maximum generating capacity of 2000 MW and a storage capacity of 20,000 MWh is discussed. Key factors were the selection of the high head pump-turbine equipment and the geotechnical considerations relevant to the underground cavern designs. The comparison of pump-turbine alternatives is described leading to the selection for detailed study of both a single-step configurations, using multistage reversible pump-turbines, and a two-step configuration, with single-stage reversible pump-turbines. DOE

N82-11621# Potomac Electric Power Co., Washington, D.C.
PRELIMINARY DESIGN STUDY OF UNDERGROUND PUMPED HYDRO AND COMPRESSED-AIR ENERGY STORAGE IN HARD ROCK. VOLUME 9: DESIGN APPROACHES: CAES, APPENDIX C. MAJOR MECHANICAL EQUIPMENT Final Report
Apr. 1981 108 p refs Prepared in cooperation with Acres American, Inc., Columbia, Md. Sponsored in part by Electric Power Research Inst.
(Contract DE-AC02-77ET-28013; EPRI Proj. 1081-1)
(DE81-030672; EPRI-EM-1589-Vol-9-App-C) Avail: NTIS HC A06/MF A01

The major mechanical equipment includes the turbine-motor/generator, compressor train, intercooler/aftercooler system, and exhaust gas recuperator. The design criteria for each of these components is interrelated with, and dependent upon, each of the other components within the major mechanical equipment group. Careful consideration of this dependency has resulted in an overall design approach which satisfies the requirements of the CAES operational cycle while providing for a conservative component design. DOE

N82-11622# Lincoln Lab., Mass. Inst. of Tech., Lexington.
CARLISLE HOUSE: AN ALL-SOLAR ELECTRIC RESIDENCE
Burt E. Nichols and Steven J. Strong (Solar Design Associates, Lincoln, Mass.) 1981 4 p Presented at the 15th IEEE Photovoltaic Specialist Conf., Orlando, Fla., 11-15 May 1981 Sponsored by DOE
(DOE/ET-20279/133; CONF-810526-16) Avail: NTIS HC A02/MF A01

A solar photovoltaic array on the roof produces electricity, passive solar features provide much of the space heating, thermal collectors provide domestic hot water, and energy conservation measures reduce electrical and thermal energy requirements to a minimum. The overall performance of the system was reviewed. T.M.

N82-11623# Georgia Inst. of Tech., Atlanta. School of Social Sciences.
AN ASSESSMENT OF SELECTED SOLAR ENERGY INDUSTRY ACTIVITIES
J. David Roessner Nov. 1980 129 p refs
(PB81-222424; NSF/PRA-80-SP-1187) Avail: NTIS HC A07/MF A01 CSCL 05C

The past, present, and near-term conditions of four industries based on solar energy technologies are examined-solar heating; photovoltaics; concentrating solar collectors for process heat and electric power applications; and passive components such as skylights and greenhouses. The report identifies key, unresolved issues for government policies intended to influence future solar industrial development; assesses the past and current federal role in these industries; and draws tentative conclusions about how government policies have affected their evolution. This evolution is compared to the evolution of typical, innovation-based industries. For each of the four solar industries researched, the collected data are discussed as follows: characteristics of sales; the government role; investment strategies and R & D activities; near-term trends; and comparisons with other industries. SITE SELECTION FOR SMALL WIND ENERGY CONVERSION SYSTEMS FOR US DEPARTMENT OF ENERGY FIELD EVALUATION PROGRAM
Bruce H. Bailey Oct. 1980 67 p Sponsored by New York State Energy Research and Development Authority
(PB81-226862; NYSERDA-81-2) Avail: NTIS HC A04/MF A01 CSCL 10A

The site selection procedure followed to locate two qualified sites for the installed and monitoring of two commercially available small wind energy conversion systems as part of the U.S. Department of Energy's Field Evaluation Program is described. The aim of the evaluation program is to gain operating experience with wind systems in actual locations and to identify the siting and operational issues involving wind energy conversion systems. The two sites selected were approved as test sites for the program. GRA

THE ROGERS FOCUSING HELIOSTAT EXPERIMENTAL PROGRAM AT RENSSELAER POLYTECHNIC INSTITUTE
W. E. Rogers, D. N. Borton, and M. P. Rice Dec. 1980 39 p Sponsored by New York State Energy Research and Development Authority
(PB81-226813; Rept-80-24; NYSERDA-80-24) Avail: NTIS HC A03/MF A01 CSCL 10A

A research effort to develop a solar collector package designed specifically with the needs and solar resources of the Northeast in mind is described. The heliostat is a concentrating solar collector which is 30 feet high, 34 feet wide and has 864 square feet of mirror concentrator. Electric controls move the structure so it tracks the path of the Sun as it rises and sets and moves across the sky. When the Sun is not shinning, the mirrors turn down, shielding them from the dirt, ice and snow. However, when it rains the mirrors turn up for cleaning, helping to keep them in peak operating condition. The heliostat's design incorporates a concentrating capability which takes the diffuse energy of the Sun and focuses it, creating temperatures of more than 3,600 F and producing enough steam as a result to displace 70 kW of electricity at peak operation. The unit tested in this demonstration was used for space heating, and domestic hot water as well as to fire an absorption air conditioner. GRA

MATHEMATICAL MODELING OF PHOTOCHEMICAL AIR POLLUTION Ph.D. Thesis
Gregory John McRae 1981 796 p
Avail: Univ. Microfilms Order No. 8121063

Air pollution is an environmental problem that is both pervasive and difficult to control. An important element of any rational control approach is a reliable means for evaluating the air quality impact of alternative abatement measures. Such a capability is presented in the form of a mathematical description of the production and transport of photochemical oxidants within an urban airshed. The combined influences of advection, turbulent diffusion, chemical reaction, emissions and surface removal processes are all incorporated into a series of models that are based on the species continuity equations. A delineation of the essential assumptions underlying the formulation of a three-dimensional, a Lagrangian trajectory, a vertically integrated and single cell air quality model is presented. Since Each model employs common components and input data the simpler forms can be used for rapid screening calculations and the move complex ones for detailed evaluations. Dissert. Abstr.

BEACH FORESHORE SEDIMENTATION BY ORGANIC AND INORGANIC PROCESSES Ph.D. Thesis
Robert Walter Anderhalt 1981 208 p refs
Avail: Univ. Microfilms Order No. 8129016

Inorganic processes of sedimentation are studied using the small-scale sedimentary sequence. Small-scale sedimentary sequences are the trends observed in the sediment characteristics from closely-spaced, mm-scale, stratigraphic intervals. Swash-zone deposition processes may be inferred from the type of sequence observed. Some of the trends correspond to recognizable layers or laminae in the sediment but in places these sequences are not visually obvious. The type of bedding which can be discerned only in small-scale sedimentary sequences or other special treatments (peels, X-radiographs), is referred to of latent bedding. Organic processes of sedimentation were studied using sediment samples collected from various positions within the sandy beach environment. These samples were analyed for total organic carbon (TOC), percent carbonate, percent water, percent gravel, percent sand, percent mud, and grain size for the purpose of determining the controls on TOC in this environment. Dissert. Abstr.

GEOCHEMICAL CONTROLS ON TRACE METAL TRANSPORT IN AQUEOUS ENVIRONMENTAL SYSTEMS Ph.D. Thesis
Jeffrey Lynn Means 1981 260 p
Avail: Univ. Microfilms Order No. 8121473

Geochemical controls on the mobility of selected trace metals in two different environmental systems are examined. Geochemical processes that are promoting or retarding the leakage of radionuclides from waste disposal pits and trenches and natural controls on trace metal geochemistry in ground, surface, and estuary water are evaluated. Initially, organic controls on trace element transport and the removal mechanisms of trace elements were the principal subjects of interest. Later, inorganic controls on iron and aluminum solubility, bacterial mechanisms of bog iron deposition, and the trace element and organic geochemistry of the estuaries were also investigated. The results of the bog iron deposition study suggest that iron oxidizing bacteria are catalyzing the precipitation of bog iron. Results of both the study areas lead to the generalization that some of the important geochemical controls on trace element transport in aqueous environmental systems are very selective reactions between only trace amounts of reactants. Dissert. Abstr.

NITROGEN DYNAMICS IN A LAGOON DEVELOPMENT AND AN ADJACENT SALT MARSH Ph.D. Thesis
Teruo Sugihara 1981 367 p
Avail: Univ. Microfilms Order No. 8122131

Aquatic nitrogen standing stocks, factors affecting these stocks, and various nitrogen cycle processes were studied at a lagoon housing development and an adjacent salt marsh near Manahawkin, New Jersey. Inorganic (ammonia, nitrate, and nitrite) and total organic nitrogen were measured at a number of stations in both the altered and natural marsh systems. Other factors measured concurrently were water temperature, salinity, dissolved oxygen, and depth among others. During the latter portion of the study, nitrogen fixation activities fo several commmunities in both types of systems were determined using the acetylene reduction methods. The nitrogen inputs due to ammonification, excretion, and precipitation/runoff were also monitored in part at this time. Dissert. Abstr.

N82-11633 California Univ., Los Angeles.
ENVIRONMENTAL PROTECTION AS AN ONGOING COMPONENT OF LARGE FACILITIES ENGINEERING PROJECTS Ph.D. Thesis
Paul Edward Smokler 1981 242 p
Avail: Univ. Microfilms Order No. 8122847

An Environmental Protection System (EPS) was developed. The purpose of the system is to ensure that environmental protection begins at the project conceptual stage, and continues through design, construction, and implementation of construction surveillance. This system, initiated in rudimentary form for the Space Shuttle (West Coast) Space Transportation System was expanded upon and refined in the application of EPS to the Missile X (MX) project. The stages of a large facilities engineering project include systems requirements definition, system design, definition of facility requirements, development of facility criteria, generation of facility designs, facility construction, and facility activation and operation. The EPS is composed to environmental parameters such as endangered species, archaeology, etc. However, the key to its implementation is in the endeavors to translate this scientific intent into the tangible engineering criteria. Dissert. Abstr.

US-Patent-Class-252-422) Avail: US Patent and Trademark Office CSCL 13B

The additive is for a raw sewage treatment process of the type where settling tanks are used for the purpose of permitting the suspended matter in the raw sewage to be settled as well as to permit adsorption of the dissolved contaminants in the water of the sewage. The sludge, which settles down to the bottom of the settling tank is extracted, pyrolyzed and activated to form activated carbon and ash which is mixed with the sewage prior to its introduction into the settling tank. The sludge does not provide all of the activated carbon and ash required for adequate treatment of the raw sewage. It is necessary to add carbon to the process and instead of expensive commercial carbon, coal is used to provide the carbon supplement. T.M.

MEASUREMENTS OF AEROSOL SIZE DISTRIBUTION IN THE LOWER TROPOSPHERE OVER NORTHERN EUROPE Interim Report
Bruce W. Fitch and Ted S. Cress Jun. 1981 15 p refs
(Contract F19628-78-C-0200; AF Proj. 7670)
(AD-A104272; SIO-REF-81-18; SCIENTIFIC-14; AFGL-TR-80-0192) Avail: NTIS HC A02/MF A01 CSCL 04/1

Airborne measurements of particle size distributions were made at several altitudes within and above the mixing layer at sites near Ahlhorn and Meppen (W. Germany), Rodby (Denmark) and Bruz (France). The distributions were measured over the range 0.2 to 5.9 micrometers in particle radius using a Royco model 220 particle counter. The experimental data gathered at the sites were analyzed in terms of volume-size distributions instead of the commonly used particle number distributions. The volume distribution plots were found to be bimodal with the accumulation mode centered at a mean particle radius in the range 0.26 to 0.49 microns and the coarse particle mode existing beyond 1.0 micron. The data show the accumulation mode is well defined by a log-normal distribution. The values of the measured volume scattering coefficient and mean particle radius of the accumulation mode increase as the maximum particle volume of the mode increases. The existence of an accumulation mode was almost always confined to the mixing layer. It is interesting that haze layers above the mixing layer were found to have a distinct coarse particle mode but, generally, no distinct accumulation mode. The total concentration of particles in each of the two modes appear related for larger values of concentration in the coarse particle mode. Author (GRA)

TRACE-ELEMENT AND PHASE RELATIONS IN FLY ASH Final Report
L. D. Hulett, A. J. Weinberger, N. M. Ferguson, K. J. Northcutt, and W. S. Lyon Electric Power Research Inst. May 1981 70 p refs Sponsored in part by Electric Power Research Inst.
(Contract W-7405-eng-26; EPRI Proj. 1061)
(DE81-028555; EPRI-EA-1822) Avail: NTIS HC A04/MF A01

Matrix components were isolated and individually analyzed to determine trace element distributions. After particle sizing and extraction of magnetic components, the aluminosilicate phases were etched in 1 percent HF to remove glasses comingled with mullite and quartz. Neutron activation and atomic absorption analyses showed tha most of the +1- and +2-valent elements, rare earths, and certain transition metals were concentrated in the glass phases. Cr, V, Ti, Fe, Ga, and Zr, which are trivalent and tetravalent, were concentrated in the crystal phases. X-ray diffraction and elemental analyses show that the main components of the magnetic phase are ferrite compounds with compositions of approximately Fe23AlO7O4. First-row transition elements, V, Cr, Mn, Co, Cu, Ni, and Zn are concentrated by factors as high as 50 in the magnetic phases. DOE

LIQUID-LIQUID CHROMATOGRAPHY FRACTIONATION OF ORGANIC COMPOUNDS IN COMPLEX MIXTURES: APPLICATION TO AUTOMOBILE EXHAUST Ph.D. Thesis
Steven Gray Colgrove 1980 304 p refs
(Contract W-7405-eng-82)
(DE81-030743; IS-T-914) Avail: NTIS HC A12/MF A01

With the use of the fractionation method, a mixture of organic compounds can be separated into strong acid, weak acid, base, aldehyde, ketone, polar, and nonpolar fractions. Organic compounds, representing several chemical classes, were used to determine how much material would be lost during the fractionation and to determine how well the various compound types could be separated from each other. Most of the compounds tested were recovered in yields which were sufficient to provide good qualitative and quantitative data. Problems relating to impurities introduced into samples by solvents and reagents were examined. In addition, some reactions which led to the formation of artifacts were investigated. DOE

SULFUR POLLUTION CONTROL. PHASE 1: THE DISPOSAL PROGRAM Final Report, Sep. 1978 - Jun. 1980
Michael Rieber, Benjamin Okech, and Roger Fuller Jan. 1981 263 p refs
(Contract DI-BM-JO-88144)
(PB81-222612; BM-OFR-94(3)-81) Avail: NTIS HC A12/MF A01; also available in set of 4 reports HC E99 CSCL 07A

Sulfuric acid production from sulfur based acid plants and smelters is analyzed and industry competition, with particular emphasis on voluntary versus abatement acid, is reviewed. Production costs for both acid plants and smelters are estimated. Large scale users prefer sulfur based acid production if the heat value of the reaction is utilized as a steam credit. Voluntary acid is a more stable supply source than smelter acid. Voluntary acid output is a reaction to price and demand conditions. An output forecast is made based on APC regulations, implementation, and estimated metals production. GRA

CONTROL OF UTILITY BOILER AND GAS TURBINE POLLUTANT EMISSIONS BY COMBUSTION MODIFICATION, PHASE 2 Final Report, Jun. 1976 - Jun. 1979
E. H. Manny and A. R. Crawford Mar. 1981 178 p refs
(Contract EPA-68-02-1415)
(PB81-222267; EPA-600/7-81-039; EE.5E.81) Avail: NTIS HC A09/MF A01 CSCL 13B

The applicability of combustion modification (CM) techniques to control NOx and other pollutant emissions from utility boilers and gas turbines without causing deleterious side effects was studied. Comprehensive, statistically designed tests were used to evaluate the effect of CM. In staged low excess air tests of low-NOx, dual-fired utility boilers, special attention was paid to the determination of potentially adverse side effects, increased combustible emissions, unwanted changes in particulate mass loading and size distribution, reduced boiler efficiency, increased furnace slagging, and tube wall corrosion may be applied to coal fired utility boilers. The extent of furnace tube wall corrosion and slagging could not be determined conclusive. GRA

(PB81-222804; BM-OFR-94(2)-81) Avail: NTIS HC A09/MF A01 CSCL 13B

Sulfur recovery from domestic sour natural gas and petroleum refining on a current basis and projected to the mid-1990's on a regional basis was estimated. The current basis depends importantly on gas production projection for the Overthrust Belt and the associated H2S. The regional basis depends on projected increases in the sulfur content and weight of imported crude oils, total crude oil imports, and anticipated refinery response. GRA

ASSESSMENT OF HAZARD POTENTIAL FROM COMBUSTION OF WASTES IN INDUSTRIAL BOILERS Final Report, Jun. 1980 - Apr. 1981
J. W. Harrison, J. B. White, and W. J. King Jul. 1981 122 p refs
(Contract EPA-68-02-3170)
(PB81-221889; EPA-600/7-81-108) Avail: NTIS HC A06/MF A01 CSCL 21D

Results of a study to determine the extent of the present onsite use of waste fuel in industrial boilers and related process equipment, the nature and quantities of the materials so disposed of, and current regulations concerning such use are presented. Based on contacts with federal, state, and local environmental protection officials, industry personnel, and the open literature, the study concludes that: a wide variety of materials are burned as fuel in standard or appropriately modified combustion equipment; the practice can be exposed to expand due to the economic pressures of hazardous waste disposal and rising fossil fuel costs; and virtually no emission data on waste fuel combustion (except through incineration) is available. GRA

ENVIRONMENTAL RESEARCH PLAN FOR GAS SUPPLY TECHNOLOGIES. VOLUME 1: EXECUTIVE SUMMARY Final Report
L. M. Tipton and P. D. Junkin 29 May 1981 78 p refs 2 Vol.
(Contract GR1-5080-351-0316)
(PB81-222309; GRI-80/0013.1) Avail: NTIS HC A05/MF A01 CSCL 21D

The environmental impacts and constraints associated with gas supply technologies are summarized. Specific environmental research needs based on state of the art technology and current environmental knowledge are identical. Technologies considered include those producing: unconventiaI natural gas (tight gas sands, Devoian shale, coalbed methane, and geopressured methane), SNG from coal and peat and SNG from biomass (land based, water based and waste. INDUSTRIAL PROCESS FUGITIVE EMISSIONS INVENTORY FOR THE REGION V GREAT LAKES SHORELINE Final Report
Charles Mackus and Eddy Lin 1980 261 p refs
(Contract EPA-68-01-4140)
(PB81-212037) Avail: NTIS HC A12/MF A01 CSCL 13B

The study revealed that approximately 229,000 to 531,000 tons of fugitive particulates were deposited into the Great Lakes during 1978. Large industrial cities such as Chicago, Gary, Cleveland, Toledo, Detroit, and Milwaukee were found to have the largest concentration of major fugitive emission sources. Iron and steel industries were found to be the largest fugitive emission sources bordering the lakes. T.M.

AIRBORNE RADIOLOGICAL SAMPLING OF MOUNT ST. HELENS PLUMES
Vernon E. Andrews Apr. 1981 20 p refs
(PB81-213795; ORP-LVF-81-2) Avail: NTIS HC A02/MF A01 CSCL 13B

The samples were analyzed for uranium and thorium isotopes, radium -226, lead-210, polonium-210, and radon-222. Other laboratories analyzed samples to determine particle size distribution and elemental composition. The only samples containing radioactivity above normal ambient levels were collected on May 20. Polonium-210 concentrations in the plume, determined from a sample collected between 5 and 30 km from the crater, were approximately an order of magnitude above background. Radon-222 concentrations in samples collected from the plume centerline at a distance of 15 km averaged approximately four times the average surface concentrations. The small increases in radioactivity would cause no observable adverse health effects. GRA

EFFECTS OF PLANFORM GEOMETRY ON TIDAL FLUSHING AND MIXING IN MARINAS Final Report, Oct. 1978 - Sep. 1979
R. E. Nece, E. P. Richey, J. Rhee, and H. M. Smith Jun. 1981 84 p refs
(Grant EPA-R-806146)
(PB81-219537; EPA-600/3-81/039) Avail: NTIS HC A05/MF A01 CSCL 13B

Parameters investigated were: planform geometry aspect ratio; ratio of entrance cross-sectional area to basin planform area; effect of rounding of corners in the basin interior; orientation and of two entrances versus a single entrance. It is concluded that for rectangular planform basins, optimum exchange is achieved when the basin length to width (aspect) ratio lies between 0.5 and 2.0, the interior corners are rounded and the single

entrance centrally located on the seaward side of the harbor.

VAPOR-PHASE CRACKING AND WET OXIDATION AS POTENTIAL POLLUTANT CONTROL TECHNIQUES FOR COAL GASIFICATION Final Report, Nov. 1976 - Apr. 1981
W. J. McMichael, S. K. Gangwal, D. A. Green, and F. O. Mixon Jun. 1981 56 p refs
(PB81-219594; RTI/1934/00-01F; EPA-600/7-81-096) Avail: NTIS HC A04/MF A01 CSCL 13B

Bench-scale experiments were used to deterimine rates of hydrocracking and wet oxidation as a function of process conditions and catalyst used. A microreactor system, capable of holding 1.0 cc of material to be screened for catalytic activity, was used in the hydrocracking studies. Benzene and alkylated benzene compounds were used as model compounds in determining the potential of various materials fo cracking rates. Thiophene was used as a model compound for catalyst poisoning studies. Cracking rates were determined for coal-derived materials produced from bituminous and subbituminous coals and materials containing iron and nickel compounds. T.M.

LINERS OF NATURAL POROUS MATERIALS TO MINIMIZE POLLUTANT MIGRATION Final Report, Oct. 1975 - Sep. 1977
Wallace H. Fuller Jul. 1981 86 p refs
(Grant EPA-R-803988)
(PB81-221863; EPA-600/2-81-122) Avail: NTIS HC A05/MF A01 CSCL 13B

The use of natural low-cost materials as barriers for minimizing pollution migration out of landfills by retaining contaminants from liquids was investigated. The relative effectiveness of natural low-cost liners of crushed limestone, clayey soil, hydrous oxides of iron, and crushed pecan hulls for minimizing the migration of Be, Cd, Cr, Fe, Ni, Zn, and total organic carbon constituents of municipal solid waste landfill leachates was evaluated. Several leachate variables such as aqueous dilution, aeration, pH, and flux were also studied for their effect on movement of metals through 11 representative U.S. soils. Laboratory investigations using soil columns as a first step in screening for potential liners and manipulation practices are described. Limestone and hydrous iron oxide were found to be potentially useful as porous liners for retention of metallic leachate constituents. The amounts of these materials in natural soil were also found to be useful predictors of contaminant removal. Author

RAINFALL-RUNOFF MODELING AND PRELIMINARY REGIONAL FLOOD CHARACTERISTICS OF SMALL RURAL WATERSHEDS IN THE ARKANSAS RIVER BASIN IN COLORADO Final Water-Resources Investigation
Russell K. Livingston 1981 49 p refs Prepared in cooperation with the Colorado Div. of Highways and the Federal Highways Administration, Washington, D.C.
(PB81-224313; USGS/WRD/WRI/81-059; USGS/WRI-80-112) Avail: NTIS HC A03/MF A01 CSCL 13B

Both observed and synthetic rainfall-runoff and annual peak-discharge data for 17 rural watersheds were analyzed to evaluate the magnitude, frequency, and volume of floods in the plains region of the Arkansas River basin in Colorado. The results from analysis of observed data were weighted or averaged with results from analysis of synthetic data to provide improved estimates of predicted flood characteristics. The 10-, 25-, 50-, and 100-year peak discharges were regionalized using multiple-regression and station-year methods. Relations were developed to determine peak discharge from contributing drainage area (standard error of estimate 30 to 50 percent) and flood volume from peak discharge (standard error of estimate 62 percent) for ungaged basins between 0.5 and 15 square miles in size. STABILIZATION CHARACTERISTICS OF DEPOSITS OF BIOLOGIC SOLIDS GENERATED IN AERATED LAGOONS
Linvil G. Rich Mar. 1981 39 p refs
(Contract DE-14-34-0001-9131)
(PB81-224297; WRRI-92; W81-03951; OWRT-B-123-SC(1)) Avail: NTIS HC A03/MF A01 CSCL 13B

Properly-designed dual-power-level multicellular lagoon systems should discharge effluents low both in suspended solids and biochemical oxygen demand. Solids that settle form deposits in which bio-degradable materials decompose in a benthal environment. The rates of benthal stabilization were studied. A deposit formed at the bottom of an aerated water column that was primarily organic under conditions in which aerated lagoon solids were added on a semi-continuous basis was examined. Criteria for the sizing of lagoon cells and the specification of aeration equipment were developed. GRA

A GEOCHEMICAL AND SEDIMENTOLOGICAL STUDY OF THE DREDGED MATERIAL DEPOSIT IN THE NEW YORK BIGHT
R. Dayal, M. G. Heaton, M. Fuhrmann, and I. W. Duedall Feb. 1981 188 p refs Prepared in cooperation with State Univ. of New York at Stony Brook
(PB81-224107; NOAA-TM-OMPA-3; NOAA-81042701) Avail: NTIS HC A09/MF A01 CSCL 13B

Investigations of the dredged material deposit reveal that the sediments are composed of a wide variety of sediment types which can be classified as quartz and glauconitic sands, muds, sandy muds, gravel intermixed with muds, and artifact material such as coal and fly ash, wood, slag, metal flakes, glass, etc. Fine grained, black sandy mud is characteristic of dredged material. Glauconitic sand and gravelly quartzose sand are typical of the natural seiment underlying the deposit and in surrounding areas. The spatial distributions of heavy metals such as Pb, Cu, Ag, Hg, Cd, Fe, and Mn in the dredged material deposit exhibit highly variable and considerably elevated concentrations over those observed in sediment outside the deposit and in underlying natural sediment. EVALUATION OF EXHAUST EMISSIONS DATA FOR DIESEL ENGINES USED IN UNDERGROUND MINES
John W. Sheehy Sep. 1980 50 p refs
(PB81-225377; DHHS/PUB/80-146) Avail: NTIS HC A03/MF A01 CSCL 06J

Diesel exhaust pollutants evaluated were nitrogen oxide (10102439) (NO), carbon nonoxide (630080) (CO), and carbon dioxide(124389) (CO2). The pollutants were collected from 4,6 8, and 12 cylinder indirect injection engines prior to installation of any emission control device. NO emissions ranged from 3.8 to 6.0 grams per brake horsepower hour (gm/bhphr). The lowest NO emissions were from the 6 cylinder engine, and highest emissions were produced by the 8 cylinder engine. CO2 exhaust emissions ranged from 580 to 812 gm/bhphr. Average CO2 emissions from the turbocharged aftercooled (TA) engines were 21 percent lower than from the naturally aspirated (NA) engines, and the methane 74828) atmosphere slightly reduced CO2 emissions. CO emissions ranged from 0.8 to 2.4 gm/bhphr. CO emissions from the TA engine were much lower than CO emissions from any of the NA engines. T.M.

USE OF A VEGETATIVE FILTER ZONE TO CONTROL FINE-GRAINED SEDIMENTS FROM SURFACE MINES Final Report
Steven C. Albrecht (Hittman Associates, Inc., Lexington, Ky.) and Billy J. Barfield Mar. 1981 171 p refs Prepared in cooperation with Kentucky Dept. of Natural Resources and Environmental Protection
(PB81-226110) Avail: NTIS HC A08/MF A01 CSCL 08M

This project was initiated with the specific purpose of conducting a field test on vegetation as a viable sediment trapping medium. The project was designed for a field evaluation under typical mining conditions. The filter area was constructed directly below an abandoned surface mine bench, on typical soil types found in mined areas of Eastern Kentucky. The outslope located above the filter was the primary area from which sediment-laden drainage was to be diverted to the inlet monitoring station. Sediment-laden water samples were collected at the inlet flume for comparison with samples collected at the outlet flume to permit evaluation of the sediment removal capability of the vegetative filter. BETTER MONITORING TECHNIQUES ARE NEEDED TO ASSESS THE QUALITY OF RIVERS AND STREAMS, VOLUME 1 Report to the Congress
30 Apr. 1981 135 p refs 2 Vol.
(PB81-225286; CED-81-30-Vol-1) Avail: NTIS HC A07/MF A01 CSCL 13B

The Environmental Protection Agency and the Geological Survey use sampling networks to assess the quality of the Nation's rivers and streams. The Council on Environmental Quality strongly endorses this approach and uses the water quality data from the networks in its annual environmental reports. Water quality is far too complex to be monitored by these networks. Small samples, generally taken monthly cannot account for water quality at individual sites and cannot accurately represent other locations on the same river. Nationwide reports based on data from the networks are not reliable. Special studies of individual rives of river segments would yield more scientifically sound and useful information on water quality. GRA

SELECTED STUDIES OF FOUR HIGH-TEMPERATURE AIR-POLLUTION SOURCES Ph.D. Thesis
Mark Steven Germani 1980 406 p
Avail: Univ. Microfilms Order No. 8121096

The atmospheric emissions of five copper smelters, a coal-fired power plant, a municipal incinerator and the Mt. Erebus volcano in Antarctica were examined. Many chalcophilic elements, e.g., As, Se, Pb, Cd, Zn, W and in, are strongly enriched with respect to the Earth's crustal abundance pattern in particulate material emitted from copper smelters. Vapor-phase concentrations of several elements in a high temperature gas stream and tested at a coal-fired power plant were determined and compared with those from a municipal incinerator. The results from the coal-fired power plant and incinerator indicate that 5-10 times more Hq is emitted from the power plant. Particulate and vapor-Erebus show large enrichments for many elements, most notably the volatile chalcophilic elements, As, Se, In, Cd and Sb, and the halogens, F, Cl and Br. About 95% of the Cl, 24% of the As and > 90% of the F are present in the vapor phase. High concentrations of F are present in the lava lake as evidenced by the ratio of Cl to F found in the vapor-phase samples.

MONTE CARLO CALCULATIONS OF THE MELTING POINT OF IRON AT CORE PRESSURES Ph.D. Thesis
Robert Stephen Abelson 1981 188 p
Avail: Univ. Microfilms Order No. 8120914

The melting point of iron at pressures in the Earth's core places strong constraints on the temperature in the Earth's core. The melting point was determined from its thermodynamic definition, that the Gibb's free energies of the solid and liquid phases are equal. The Monte Carlo simulations can generate accurate equations of state (EOS) of solids and liquids if the forces between the atoms are understood as evident by their successful modeling of the EOS argon and other rare gases. These computer simulations were successful in locating the melting transitions by elaborate techniques of determining the Gibb's free energies from the equations of state of the solid and liquid phases. This justifies the use of the Monte Carlo method.

THE QUANTITATIVE RECOGNITION AND EVALUATION OF SEISMIC QUIESCENCE: APPLICATIONS TO EARTHQUAKE PREDICTION AND SUBDUCTION ZONE TECTONICS Ph.D. Thesis
Ray Edward Habermann 1981 276 p refs
Avail: Univ. Microfilms Order No. 8122288

Teleseismically recorded earthquake hypocenters are the only geophysical data related to earthquake occurrence continuously available for many regions of the world. The recognition of patterns in these data which may indicate that preparation for a great event has begun, if they exist, is essential for earthquake prediction in these regions. Techniques for quantitatively recognizing such rate decreases and evaluating their spatial and temporal uniqueness were developed and applied to several seismically active regions of the world.

GEOLOGY OF THE NAHCOLITE DEPOSITS AND ASSOCIATED OIL SHALES OF THE GREEN RIVER FORMATION IN THE PICEANCE CREEK BASIN, COLORADO Ph.D. Thesis
John Richard Dyni 1981 182 p
Avail: Univ. Microfilms Order No. 8122279

Stratigraphic and lithologic studies of drill cores from 10 exploratory holes reveal that five eights of the nahcolite resource, occurs as crystalline aggregates in marlstone. The remainder of the resource consists of laterally continuous zones of disseminated nahcolite in marlstone and beds of mixed nahcolite and halite. Sedimentologic data indicate that the marlstones and associated sodium minerals were deposited by pelagic, turbiditic, and evaporitic processes in a permanent alkaline lake. Lower lake waters and sediments favored high rates of bacterial reduction of sulfate and hydrolysis of fine grained detrital silicate minerals. These processes resulted in production of bicarbonate and the formation of an authigenic suite of carbonate and silicate minerals devoid of clay and sulfate minerals. Cyclic probably seasonal, stratification is recorded by the laminated marlstones and in some units of disseminated and bedded nahcolite and halite. The vertical distribution of total sulfur in the marlstones is also cyclic and may be related to evaporative phases of the lake.

COCORP TRAVERSES IN WYOMING AND OKLAHOMA Ph.D. Thesis
Jonathan Andrew Brewer 1981 153 p

Avail: Univ. Microfilms Order No. 8119544

Deep crustal seismic reflection data recorded by the Consortium for Continental Reflection Profiling (COCORP) project are processed and interpreted to study the deep structure of continental crust in Wyoming and Oklahoma. The Wyoming data were recorded across the Wind River and Laramie Mountains, two of a series of massive basement uplifts formed during the Laramide orogeny. The COCORP traverse across the Wind River Mountains recorded reflections from a moderately dipping thrust fault that can be traced to middle and possibly lower crustal depths. The mountains were uplifted along this thrust by compression and shortening of the Earth's crust. Numerous other events were recorded on the seismic profiles and these data provide some of the detailed crustal sections yet obtained by COCORP. These COCORP profiles, recorded across mountain ranges lying within the North American craton, demonstrate the utility of deep seismic reflection profiling in delineating the deep structure of continental crust, its mode of deformation and geological history. Dissert. Abstr.

ELECTRICAL CONDUCTIVITY STRUCTURE OF THE SAN ANDREAS FAULT IN CENTRAL CALIFORNIA Ph.D. Thesis

Wayne Jude Phillips 1981 119 p

Avail: Univ. Microfilms Order No. 8119465

The electrical conductivity structure of a section of the San Andreas fault is investigated by means of an electromagnetic induction experiment utilizing a grounded electric dipole source. The results indicate a sharp contrast in conductivity across the fault zone. The resistivity of the sediments on the northeast side of the fault is approx. 20 ohm-m compared to 1000 ohm-m for the Gabilan granites on the southwest side. There is evidence for a zone of high conductivity beneath the Gabilans. A gravity survey in the areas indicates the presence of a pocket of low density rocks located approx. 1 to 9 Km beneath the Gabilans and 2 Km southwest of the surface trace of the fault. The depth to the conducting layer there correlates resonably well with the upper bound of these rocks. Further away from the fault there is a discontinuity in seismic velocity at 12 Km. The depth to the conducting layer in this area is 13 Km. Farther from the fault zone the seismic velocities and electrical conductivity at depth are consistent with the hypothesis that the Gabilans are underlain by a slab of oceanic crust. Dissert. Abstr.

N82-11687 California Univ., Los Angeles.

LOCAL EARTHQUAKE TRAVEL TIMES AND SPATIAL VARIATIONS OF CRUSTAL VELOCITY IN SOUTHERN CALIFORNIA Ph.D. Thesis

Raymond Andrew Ergas 1981 130 p

Avail: Univ. Microfilms Order No. 8120944

Measurements of P-wave arrival times from local earthquakes contain information about differences in crustal velocity within a region. Using 32,000 arrival times recorded by a seismic array in southern California, these spatial variations in velocity were estimated. A statistical model of the behavior of travel time residuals derived from a laterally homogeneous velocity model accounts for the major sources of error in the recording and hypocenter location processes, and leads to a set of editing procedures to remove aberrant data. Edited data were inverted under a variety of assumptions to estimate a laterally varying veocity model using a variation on a method originally developed for teleseismic data. The improvement in the residuals due to the new velocity models is statistically significant. The inversion method appears to underestimate the size of the velocity contrasts, but the results are generally consistent with those obtained using other types of data. A major result is that the Peninsular Ranges have substantially higher average velocity than nearby regions, probably due to differences in crustal tickness and composition. Dissert. Abstr.

IMPROVED SIMULATION OF AEROSOL, CLOUD, AND DENSITY MEASUREMENTS BY SHUTTLE LIDAR Final Report

Philip B. Russell, Bruce M. Morley, John M. Livingston, Gerald W. Grams (Georgia Inst. of Tech.), and Edward W. Patterson Washington NASA Nov. 1981 165 p refs

(Contract NAS1-16052)

(NASA-CR-3473) Avail: NTIS HC A08/MF A01 CSCL 04A

Data retrievals are simulated for a Nd:YAG lidar suitable for early flight on the space shuttle. Maximum assumed vertical and horizontal resolutions are 0.1 and 100 km, respectively, in the boundary layer, increasing to 2 and 2000 km in the mesosphere. Aerosol and cloud retrievals are simulated using 1.06 and 0.53 microns wavelengths independently. Error sources include signal measurement, conventional density information, atmospheric transmission, and lidar calibration. By day, tenuous clouds and Saharan and boundary layer aerosols are retrieved at both wavelengths. By night, these constituents are retrieved, plus upper tropospheric, stratospheric, and mesospheric aerosols and noctilucent clouds. Density, temperature, and improved aerosol and cloud retrievals are simulated by combining signals at 0.35, 1.06, and 0.53 microns. Particlate contamination limits the technique to the cloud free upper troposphere and above. Error bars automatically show effect of this contamination, as well as errors in absolute density nonmalization, reference temperature or pressure, and the sources listed above. For nonvolcanic conditions, relative density profiles have rms errors of 0.54 to 2% in the upper troposphere and stratosphere. Temperature profiles have rms errors of 1.2 to 2.5 K and can define the tropopause to 0.5 km and higher wave structures to 1 or 2 km. Author

STRATOSPHERIC TRACE GAS COMPOSITION STUDIES UTILIZING IN SITU CRYOGENIC, WHOLE-AIR SAMPLING METHODS

Charles C. Gallagher, Charles A. Forsberg, Robert V. Pieri, and Gerald A. Faucher 10 Mar. 1981 50 p refs

(AF Proj. 6687)

(AD-A104375; AFGL-TR-81-0071; AFGL-ERP-732) Avail: NTIS HC A03/MF A01 CSCL 04/1

A balloon borne cryogenic whole air sampler (tri-sampler) is used to obtain one-mole sample quantities at each of three altitudes on a single flight. Samples have been obtained at six altitudes from 12 to 30 km at each of five latitudes from 9 deg N to 64 deg N. The samples are maintained frozen until just prior to analysis; chemiluminescence and gas chromatography techniques are used to determine mixing ratios of NO, NO2, N2O, CFC13 and CF2C12. Variations in mixing ratios with altitude and latitude have been noted, but no variations with time within the stratosphere have been detected over the five-year duration of the flights. Gas calibration procedures include two dynamic dilution methods and one permeation tube method, with close agreement among the methods being noted. Author (GRA)

VARIATIONS IN ATMOSPHERIC ANGULAR MOMENTUM Technical Report, 1 Jan. 1976 - 31 Dec. 1980

Richard D. Rosen and David A. Salstein Jun. 1981 50 p refs

(Contract NAS5-25870)

(NASA-CR-166712; ERT-TR-A345-T1) Avail: NTIS HC A03/MF A01 CSCL 04A

Twice-daily values of the atmosphere's angular momentum about the polar axis during the five years from 1976 through 1980 are presented in graphs and a table. The compilation is based on a global data set, incorporating 90 parent of the mass of the atmosphere. The relationship between changes in the angular momentum of the atmosphere and changes in the length of day is described, as are the main sources of error in the data. The variability in angular momentum is revealed in a preliminary fashion by means of a spectral decomposition. The data presented shoul stimulate comparisons with other measures of the length of day and so provide a basis for greater understanding of Earth-atmosphere interactions. J.M.S.

Ways to foster increased study of the early evolution of the Earth, considering the planet as a whole, were explored and recommendations were made to NASA with the intent of exploring optimal ways for integrating Archean studies with problems of planetary evolution. Major themes addressed include: (1) Archean contribution to constraints for modeling planetary evolution; (2) Archean surface conditions and processes as clues to early planetary history; and (3) Archean evidence for physical, chemical and isotopic transfer processes in early planetary crusts. Ten early crustal evolution problems are outlined. A.R.H.

(Grant NsG-7610)
(NASA-CR-164943) Avail: NTIS HC A02/MF A01 CSCL 08K

The geoid bears little relation to present tectonic features of the earth other than trenches. The Mesozoic supercontinent of Pangea, however, apparently occupied a central position in the Atlantic-African geoid high. This and the equatorial Pacific geoid high contain most of the world's hotspots. The plateaus and rises in the western Pacific formed in the Pacific geoid high and this may have been the early Mesozoic position of Pacifica, the fragments of which are now the Pacific rim portions of the continents. Geoid highs which are unrelated to present subduction zones may be the former sites of continental aggregations and mantle insulation and, therefore, hotter than normal mantle. The pent-up heat causes rifts and hotspots and results in extensive uplift, magmatism, fragmentation and dispersal of the continents and the subsequent formation of plateaus, aseismic ridges and seamount chains. Convection in the uppermantle would then be due to lateral temperature gradients as well as heating from below and would be intrinsically episodic. Author

(Grant NsG-7360)
(NASA-CR-164965) Avail: NTIS HC A02/MF A01 CSCL 04A

A better detector system was developed for far infrared spectroscopy by usng cryogenic technology to cool bolometric detectors to approximately 0.4K. Technical assistance was provided to two submillimeter infrared balloon experiment (SIBEX) flights which demonstrated the diagnostic capability of far IR emission spectroscopy. It is estimated that more than a hundred spectral emission features were detected which are not due to the main emitting gases O3, O2, and H2O. The trace species sources for many features still remain unidentified and the spectra obtained during the SIBEX flights present a new source of information on stratospheric composition. A.R.H.

(AD-A104509: AFGL-TR-81-0222) Avail: NTIS HC A03/MF A01 CSCL 04/1

Recent theoretical developments on the formation of discrete auroras are reviewed to assess the progress of our understanding of discrete auroral phenomenon. In spite of the great complexity involved, a unified physical picture begins to emerge in which the roles of various auroral acceleration processes can be identified in the context of magnetosphere-ionosphere coupling. Potential drops for the formation of inverted V precipitations are supported predominantly by a combination of double layer and pitch angle anisotropy processes. Additional electron energizations for the formation of thin auroral arcs are most likely due to filamentations of electrostatic ion cyclotron turbulence along the inverted V field lines. The discrete auroras can be understood as a manifestation of the imperfect coupling state of the magnetosphere-ionosphere interaction due to enhanced magnetospheric convection. Author (GRA)

These volumes contain the experimental results of monitoring the Faraday rotation and group delay of VHF and UHF signals transmitted from the ATS-6 geostationary satellite at a station located at Palehua, Hawaii. The Faraday rotation data represents the electron content measured out to a vertical height of approximately 2000-3000 kilometers, while the group delay is a measure of the total electron content along the entire path from station to the ATS-6 satellite. The difference between these two measures of electron content has been defined as the plasmaspheric electron content along the slant path from heights above 2000-3000 kilometers to the ATS-6 satellite. Also included in the data tables are values of the equivalent vertical slab thickness defined as the ratio of vertical electron content obtained by the Faraday rotation measurement divided by the density at the peak of the ionospheric F region obtained from measurements of fOF2 from the Maui Ionosonde. HIGH LATITUDE ELECTRON DETECTORS ON SATELLITE P78-1: PRELIMINARY DATA RESULTS Final Report
Roger P. Vancour 4 May 1981 30 p
(AF Proj. 7601)
(AD-A104518; AFGL-TR-81-0131; AFGL-ERP-744) Avail: NTIS HC A03/MF A01 CSCL 04/1

Air Force satellite P78-1 carries several experiments investigating solar activity and charged particle and electromagnetic radiation measurements. One of these experiments consists of a set of electrostatic analyzers to collect electrons from 50 eV to 20 KeV in 16 channels. The sensors are exactly the same as the SSJ/3 sensor on DMSP satellites. Since the satellite is spinning at a rate of 11 + or - 1 rpm, complete pitch angle information is obtained in about 5.45 sec by each of the two sensors which are 90 degrees apart. Three passes are reported, showing where each pass is during a different intensity of magnetic activity. Oval boundaries, spectral shapes, and total energy fluxes are determined and compared to the results of others. Results from the two sensors are compared to each other. Author (GRA)

A SIMPLIFIED PROCEDURE FOR DIRECT DETERMINATION OF REAL HEIGHTS FROM VIRTUAL HEIGHT DATA
Milton M. Klein 6 Mar. 1981 26 p refs
(AF Proj. 2310)
(AD-A104374; AFGL-TR-81-0070; AFGL-ERP-731) Avail: NTIS HC A03/MF A01 CSCL 04/1

As part of an effort to determine electron density profiles in the auroral region of the ionosphere, a method was developed for directly calculating real height from ionosonde data obtained at high latitudes. The method has been modified and simplified by representing the entire dispersion curve by a single power-law curve with only one parameter. The resulting real height-virtual height relation can now be solved in a simple way for the real height. To test the accuracy of the method, virtual heights were computed for two parabolic models of the ionosphere, and the corresponding real height values were then obtained by the present method. The results obtained showed that the calculated values of real height were in very good agreement with the exact values of real height. To indicate the improvement obtainable with the introduction of additional parameters, a two-parameter function, which gives a somewhat more accurate representation of the dispersion curve than does the one-parameter function, was obtained for one case. However, the amount of computational labor required is considerably greater than that required for the present method. In view of its simplicity and accuracy, it is felt that the one-parameter method is a useful analytic tool for determining real height from ionosonde data. Author (GRA)

ROCKET DATA OF SOLAR EUV FLUX, THERMOSPHERIC ELECTRON FLUX AND N2 SECOND-POSITIVE AIRGLOW EMISSION Interim Scientific Report
R. A. VanTassel, W. J. McMahon, and L. Heroux 17 Apr. 1981 52 p refs
(AF Proj. 6690)
(AD-A104384; AFGL-TR-81-0111; AFGL-ERP-737) Avail: NTIS HC A04/MF A01 CSCL 04/1

This report presents simultaneous measurements of solar EUV flux, thermospheric photoelectron energy flux, and airglow radiation from the nitrogen second positive band system made from an Aerobee 170 rocket launched from White Sands Missile Range on 14 August 1979 at 2020 UT. The solar EUV data are combined with flux measurements obtained by H. E. Hinteregger with the solar EUV spectrometer on the Atmospheric Explorer-E satellite to provide flux measurements over the complete range of 51 to 1026 A. The energy range of the electron flux extends from 2.4 to 5.7 eV and from 14 to 34 eV. The airglow emission from the 0, 0 band of the nitrogen second positive system is presented as both volume and column rates. The volume emission rate shows a major broad peak near 150 km and a less intense peak at 108 km. Author (GRA)

APPLICATION OF VISIBLE MONOCHROMATIC AURORAL IMAGING DATA FOR MODELING INFRARED EARTH-LIMB

MORPHOLOGY Final Report, Sep. 1978 - Jan. 1981
J. B. Kumer, R. D. Sears, J. E. Evans, S. E. Harris, and R. M. Nadile 26 Jan. 1981 58 p refs
(Contract F19628-78-C-0217; AF Proj. 2310)
(AD-A104343; LMSC-D802558; AFGL-TR-81-0025) Avail: NTIS HC A04/MF A01 CSCL 04/1

A statistically comprehensive first-order auroral earth-limb data base at 2.7 and 4.3 microns is constructed from an existing 4278 and 6300 A, ground-based, all-sky TV data base, which includes approximately 200 hours of all-sky auroral data that are stored on video tape. Methods of modeling 2.7- and 4.3-micro auroral emissions on the basis of measurements of the aurora in the spectral regions (4278 A) and (6300 A) have been developed and verified against infrared data. 2.7-micron emission is modeled by the N(D2) + O2 yields NO + O mechanism. The 4.3-micron emission is modeled by two mechanisms, a relatively slower (5 to 25 min response time) mechanism due to emission by CO2, and a weaker but fast (1 to 10 s) mechanism that is indicated by the auroral data obtained 26 October 1978. In this effort, approximately 30 min of real-time auroral all-sky video data from each of the events 3/23/73 and 3/27/73 were digitized. The digitized data from the 3/23/73 event were used to construct a dynamic 2-dimensional model of auroral 2.7 and 4.3 micron earth-limb radiance over the 30 min observation period. It is seen that structure is more prominent for the relatively fast 2.7- and 4.3-micron mechanisms than for the slower CO2 4.3-micron mechanism. Author (GRA)

TWO VARIABLE MODELLING OF EQUATORWARD BOUNDARY OF AURORAL PRECIPITATION
P. Tsipouras and N. Scotti 9 Jun. 1981 17 p refs
(Contract F19628-80-C-0124; AF Proj. 9993)
(AD-A104378; SCIENTIFIC-2; AFGL-TR-80-0371) Avail: NTIS HC A02/MF A01 CSCL 04/1

This report summarizes a procedure for two variable fitting of the equatorward boundary of electron precipitation. A least squares minimization approach is used. The SSJ/3 detector consists of a set of two curved plate electrostatic analyzers designed to measure the flux of precipitating electrons in the energy range from 50 eV to 20 KeV. The detectors are flown routinely on the satellites of the Defense Meteorological Satellite Program (DMSP). The data returned from the detectors have been used to conduct an extensive study of the systematics of the shape and motion of the equatorward boundary of auroral precipitation. The equatorward extent of auroral precipitation is a key boundary condition on the state of the Earth's magnetosphere. Each pass of the satellite over the auroral oval provides two boundary determinations. One technique for studying the boundary is to tag each pair of boundary determination with the magnetic local times in which they occur and to consider each pair of two crossings to have been made simultaneously. These pairs of points can then be separated into classes according to the magnetic local time zones associated with each boundary location. Since the orbit of the satellite is nearly sun synchronous the same pairs of magnetic local time zones are passed through each day such that the number of local time zone classes is limited. GRA

ALTAIR RADAR STUDY OF EQUATORIAL SPREAD F Final Report, 11 Jan. 1979 - 30 Nov. 1980
Roland T. Tsunoda 1 Feb. 1981 54 p refs
(Contract DNA001-79-C-0153)
(AD-A104554; DNA-5689F) Avail: NTIS HC A04/MF A01 CSCL 04/1

The results of research on equatorial spread-F (ESF) phenomena obtained by using two backscatter radars, ALTAIR and TRADEX, are summarized. The radar measurements were made in support of three rocket campaigns conducted from the Kwajalein Atoll during the summers of 1977 through 1979. Backscatter data from ESF irregularities and incoherent-scatter (IS) data from thermal plasma fluctuations were used to show that the structuring of the equatorial F-region plasma is initiated by large-scale (tens to a few hundred kilometers in the east-west direction) plasma-density modulations in the bottomside F layer. The modulation, best described by wavelike altitude variations in constant electron-density contours, appears to be imposed on the bottomside F layer around E-region sunset by a yet-to--be-identified source (although atmospheric gravity waves are a likely candidate). The amplification of the wavelike modulation, in the form of upwellings from the crests of the modulation, is consistent with the amplification expected from the collisional Rayleigh-Taylor instability. Once the upwellings begin to grow in altitude extent, the west walls become unstable via the gradient-drift instability, driven by an eastward neutral wind blowing through the walls of the upwellings. The enhanced structuring of the west wall at low F-region altitudes is made possible by the presence of a velocity shear in eastward plasma drift. Author (GRA)

MILITARY GEODESY AND GEOSPACE SCIENCE, UNIT THREE
Warren G. Heller and A. Richard LeSchack Feb. 1981 172 p refs
(Contract F19628-77-C-0152; AF Proj. 3204)
(AD-A105072; SCIENTIFIC-7; AFGL-TR-81-0030) Avail: NTIS HC A08/MF A01 CSCL 04/1

This lecture course provides a full-year introduction to Military Geodesy and Geospace Science. Throughout the presentation a military perspective is maintained which links Mapping, Charting, and Geodesy (MC&G) issues with modern defense requirements. Elementary preparation is assumed in the subjects of general physics, mechanics, chemistry, astronautics, and linear system theory. The student should also be familiar with differential equations, analytic geometry, and linear algebra. Some acquaintance with vector calculus is useful but not essential. The topics covered herein are intended to provide conceptual rather than working knowledge. Ideally, the student completing this course will have attained a broad understanding of the MC&G field and will be able to develop specialized expertise quickly when required. The organizational flow of the lectures is from concepts in the initial sections, particularly in Unit One, to applications and specific systems later on. As a result the student is often referred ahead to provide motivation in regard to relevancy. In later chapters, however, the situation is reversed with the student referred back to review important conceptual material as necessary. GRA

COMPUTER MODELS TO SUPPORT INVESTIGATIONS OF SURFACE SUBSIDENCE AND ASSOCIATED GROUND MOTION INDUCED BY UNDERGROUND COAL GASIFICATION
R. T. Langland and B. C. Trent (Science Applications, Inc., Steamboat Springs, Colo.) 1981 14 p refs Presented at the

7th Ann. Underground Coal Conversion Symp., Fallen Leaf Lake, Calif., 8-11 Sep. 1981
(Contract W-7405-eng-48)
(DE81-027131; UCRL-86437; CONF-810923-1) Avail: NTIS HC A02/MF A01

Two computer codes compare surface subsidence induced by underground coal gasification at Hoe Creek, Wyoming, and Centralia, Washington. Calculations with the STEALTH explicit finite-difference code are shown to match equivalent implicit finite-elemet method solutions or the removal of underground material. Effects of removing roof material, varying elastic constants, investigating thermal shrinkage, and burning multiple coal seams are studied. A coupled finite-difference continuum rigid-block caving code is used to model underground opening behavior. Numerical techniques agree qualitatively with empiricial studies but, so far, underpredict ground surface displacement. The two methods, numerical and empirical, are most effective when used together. It is recommended that the thermal characteristics of coal measure rock be investigated and that additional calculations be carried out to longer times so that cooling influences can be modeled. DOE

RECOVERY OF SEISMIC SIGNALS IN NOISE BY ADAPTIVE PROCESSING

Glenn R. Elliott 1981 9 p refs
(Contract DE-AC04-76DP-00789)
(DE81-029469; SAND-81-1079) Avail: NTIS HC A02/MF A01

Techniques are described for use in improving the signal-to-noise ratio of electrical signals buried in noise from seismic sensors. Often not enough information is available about the characteristics of either the signal or the noise to permit the use of more classical detection methods, i.e., matched filtering, likelihood detectors, array averaging, etc. Adaptive processing can be of benefit in these cases. Examples of work to improve performance of perimeter intrusion detection systems is presented. DOE

EVALUATION OF UNCERTAINTIES IN GEOLOGIC INFORMATION

J. T. Neal 1981 10 p refs Presented at the Symp. on Uncertainties Assoc. with the Regulation of the Geol. Disposal of High-Level Radioactive Waste, Gatlinburg, Tenn., 9 Mar. 1981
(Contract DE-AC04-76DP-00789)
(DE81-025997; SAND-80-2690C; CONF-810372-5) Avail: NTIS HC A02/MF A01

Most geologic information is interpretive as opposed to factual; however, in either case conclusions commonly are derived from data having unequal reliability. Decisions can take such disparity into account by using information hierarchies, by incorporating more realism into mapping, and by more rigorous quantification of models and maps. Information hierarchies can rank direct measurement (from outcrops, boreholes, etc.) as having greater confidence than indirect measurement (from geophysics, etc.). Mapping realism can be enhanced by showing individual outcrops and by more precisely defining attributes of map units. Recognizing the evolving nature of geologic truth appears to undermine confidence, as does acknowledging the inherent subjectivity in our information base. On the other hand, facing and systematically treating uncertainty ultimately can lead to greater confidence in final decisions. DOE

RELAXATION OF GEOTHERMAL-RESERVOIR STRESSES INDUCED BY HEAT PRODUCTION

H. Murphy, ed., R. Aamodt, H. Fisher, T. Grant, C. Grigsby, R. Hendron, H. Keppler, C. Pearson, R. Potter, and G. Suhr Aug. 1981 34 p refs
(Contract W-7405-eng-36)
(DE81-032024; LA-8954-MS) Avail: NTIS HC A03/MF A01

Fifteen million kWh of thermal energy were produced during 281 days of operation of the hot dry rock (HDR) geothermal reservoir at Fenton Hill, New Mexico. Following this heat production the thermal stresses and strains so were partially released by a shot, 7-h pressurization of the reservoir above the local tectonic confining stress. Following the partial stress release, it was found that the resistance to water flow through the reservoir was decreased by 37 percent, and that the reservoir volume, as measured by tracer studies, increased by 43 percent. Microseismic events recorded with geophones in two deep wells at positions within a few hundred meters of the reservoir were concentrated in those regions of the reservoir most affected by thermal depletion. These events define a reservoir region and size in qualitative agreement with estimates based upon heat production modeling. DOE

GEOTHERMAL ENVIRONMENTAL ASSESSMENT BASELINE STUDY: VEGETATION AND SOILS OF THE ROOSEVELT HOT SPRINGS GEOTHERMAL RESOURCE AREA

K. W. Brown and G. B. Wiersma Jul. 1981 109 p refs
(PB81-223299; EPA-600/4-81-080) Avail: NTIS HC A06/MF A01 CSCL 08G

Identification and elemental concentrations of indigenous soil and plant systems found on the Roosevelt Hot Spring KGRA are described. Twenty-three different soils and five separate plant communities are geographically mapped and identified. One hundred forty-seven plant species were identified. Forbs, shrubs, and grasses are represented by 58, 53, and 36 species respectively. Three sites each measuring 25 hectares were selected for long-term vegetative assessment. At these locations a permanent enclosure measuring 24.4 meters x 24.4 meters was constructed to assess long-term effects livestock grazing. Biomass plant species, percentage composition, ground cover and livetock carrying capacities were determined at each site. Surface soils and Artemisia tridentata leaf tissue were collected for elemental analysis. GRA

ADAPTATION OF LAND USE TO SURFICIAL GEOLOGY IN METROPOLITAN WASHINGTON, D.C. Ph.D. Thesis

Robert Houston Alexander 1981 236 p
Avail: Univ. Microfilms Order No. 8121177

Implicit in the investigation is a process of communicating geologic information, and incorporating such information into land-use decisions. Land-use data were derived from high-altitude color infrared aerial photography, and the information on geologic suitability was obtained from a U.S. Geological Survey map of landforms and surface materials compiled to aid non-geologists in land use planning decisions. The new map was further interpreted and subdivided into those areas geologically suitable and unsuitable for residential and agricultural uses, respectively. The study found significant relationships among land uses and geologic map units, and significant differences in land-use and geologic suitability regimes in subregions based on distance from city center. More recently-developed areas near the urban core have higher proportional associations of residential and agricultural land use with appropriate surficial geologic characteristics than do the outlying areas on the metropolitan fringe. Dissert. Abstr.

A NUMERICAL DYNAMICAL INVESTIGATION OF THE ROLE OF SUBSYNOPTIC INERTIAL AN ISALLOBARIC ADJUSTMENTS IN ORGANIZING SEVERE LOCAL STORM ENSEMBLES Ph.D. Thesis
John William Zack 1981 330 p
Avail: Univ. Microfilms Order No. 8119543

The physical components of the severe local convection storm environment are compiled from previous investigators. It is summarized that significant convection is favored when upward vertical motion occurs in an atmosphere which has a high degree of potential hydrostatic instability. In addition, the severest storms, such as tornadoes, are favored when there is a large degree of vertical wind shear and a significant low level temperature inversion exists prior to convection storm formation. Dissert. Abstr.

THE 4-DAY TEMPERATURE WAVE IN THE WINTER POLAR STRATOSPHERE Ph.D. Thesis
David Eugene Venne 1981 135 p
Avail: Univ. Microfilms Order No. 8122571

Additional observational evidence is presented which suggests that the wave represents a normal mode oscillation of the atmosphere. A polar-plane approximation to the earth's sphericity at high latitudes is described and applied to the equations of air parcel motion, yielding solutions the zonal mean wind is taken to be in solid rotation with no vertical shear, conditions which are typical in the region of largest 4-day wave amplitudes. The substantial changes in the mean zonal wind caused by stratospheric sudden warmings are shown to modify the 4-day wave. Dissert. Abstr.

FRONTOGENESIS IN THE PLANETARY BOUNDARY LAYER OF AN AMPLIFYING, TWO-DIMENSIONAL BAROCLINIC WAVE Ph.D. Thesis
Daniel Keyser 1981 314 p
Avail: Univ. Microfilms Order No. 8120445

In order to explore the hypothesis that the absence of fine structure is related to the neglect of nonconservative processes such as the vertical turbulent transports by heat and momentum in the planetary boundary layer (PBL), a series of analytic and numerical experiments with the Hoskins-Bretherton horizontal shear model of frontogenesis in an amplifying, two dimensional baroclinic was were performed. The results of this investigation suggest two hypotheses: the first relates the orientation of cloud bands associated with low-level frontal zones to the frontogenetical mechanisms of horizontal shear and confluence. The second is concerned with explaining the structure and evolution of several atmospheric circulation systems in terms of adjustment processes toward equilibrium configurations between the mass and wind fields. Dissert. Abstr.

N82-11722 Washington Univ., Seattle.
NUMERICAL SIMULATION OF THE DYNAMICS, CLOUD MICROPHYSICS AND RADAR ECHO STRUCTURES OF TROPICAL AND MID-LATITUDE CONVECTION Ph.D. Thesis
Chee Pong Cheng 1981 229 p
Avail: Univ. Microfilms Order No. 8121187

Tropical convective cells have radar echo patterns that are distinctly different from many mid-latitude convective cells. Also, tropical convection develops associated regions of rain falling from thick anvil clouds. This anvil rain is stratiform and its radar reflectivity pattern contrasts sharply with the adar echoes of the cells. Numerical modeling is used to achieve a better understanding of the dynamical-microphysical interactions that result in the radar echo patterns of tropical and mid-latitude convective cells and of tropical anvil precipitation. Dissert. Abstr.

TIME-VARIABLE EARTH'S ALBEDO MODEL CHARACTERISTICS AND APPLICATIONS TO SATELLITE SAMPLING ERRORS Final Report
Fred L. Bartman Sep. 1981 78 p refs
(Grant NAG1-67)
(NASA-CR-165781; Rept-018921 9-1-F) Avail: NTIS HC A05/MF A01 CSCL 04B

Characteristics of the time variable Earth albedo model are described. With the cloud cover mulitplying factor adjusted to produce a global annual average albedo of 30.3, the global annual average cloud cover is 45.5 percent. Global annual average sunlit cloud cover is 48.5 percent; nighttime cloud cover is 42.7 percent. Month-to-month global average albedo is almost sinusoidal with maxima in June and December and minima in April and October. Month-to-month variation of sunlit cloud cover is similar, but not in all details. The diurnal variation of global albedo is greatest from November to March; the corresponding variation of sunlit cloud cover is greatest from May to October. Annual average zonal albedos and monthly average zonal albedos are in good agreement with satellite-measured values, with notable differences in the polar regions in some months and at 15 S. The albedo of some 10 deg by 10 deg. areas of the Earth versus zenith angle are described. Satellite albedo measurement sampling effects are described in local time and in Greenwich mean time. SOME ANALYSIS ON THE DIURNAL VARIATION OF RAINFALL OVER THE ATLANTIC OCEAN
Tepper Gill, Shien Perng, and Arthur Hughes Aug. 1981 55 p refs
(Grant NsG-5295)
(NASA-CR-164937) Avail: NTIS HC A04/MF A01 CSCL 04B

Data collected from the GARP Atlantic Tropical Experiment (GATE) was examined. The data were collected from 10,000 grid points arranged as a 100 x 100 array, each grid covered a 4 square km area. The amount of rainfall was measured every 15 minutes during the experiment periods using c-band radars. Two types of analyses were performed on the data: analysis of diurnal variation was done on each of grid points based on the rainfall averages at noon and at midnight, and time series analysis on selected grid points based on the hourly averages of rainfall. Since there are no known distribution model which best describes the rainfall amount, nonparametric methods were used to examine the diurnal variation. Kolmogorov-Smirnov test was used to test if the rainfalls at noon and at midnight have the same statistical distribution. Wilcoxon signed-rank test was used to test if the noon rainfall is heavier than, equal to, or lighter than the midnight rainfall. These tests were done on each of the 10,000 grid points at which the data are available. T.M.

In a double passage through a route laid out in a stagnation zone of the Bavarian forest, it was found that the stagnation and attendant elevation increases the danger of icing. Conversely, it turned out that formation of precipitation reduces the icing intensity. A comparison of both factors showed: the reduction of ice formation through precipitation equals the increase due to stagnation, or even exceeds it. T.M.

AN ASSESSMENT OF DETECTING MESOSCALE RAINFALL FROM MID-LATITUDE CYCLONES USING GOES IMAGERY DATA Interim Scientific Report

Ronald F. Fournier 25 Mar. 1981 40 p refs
(AF Proj. 6670)
(AD-A104377; AFGL-TR-81-0089; AFGL-ERP-735) Avail: NTIS HC A03/MF A01 CSCL 04/2

This study examined the capability of current geostationary satellite sensors in resolving and monitoring important mesoscale rain areas. Shallow mesoscale precipitation patterns were analyzed with radar and recording rain gage data associated with mid-latitude cyclones in New England. These cyclones were characterized by relatively little stratiform cloudiness in the upper troposphere. Radar thresholding was used to determine the spatial and temporal scales of small mesoscale areas (SMSAs), large mesoscale areas (LMSAs), and major echoes. Radar rainfall estimates were used to determine the relative amount of rainfall contributed by the mesoscale features. Radar analysis of the three cases showed that the spatial scale of major echoes, LMSAs, and SMSAs were large enough for detection by GOES sensors. Major echoes and the LMSAs contained within them were found to have lifetimes that are long relative to the half-hour interval between GOES transmissions. The duration of some SMSAs and all cells, however, was on the same order as the time interval between GOES transmissions. In addition, radar rainfall estimates showed that the major echoes, LMSAs, and SMSAs were the major contributors to mesoscale rainfall. For the cases examined in this study, GOES sensors were not capable of distinguishing the individual mesoscale precipitation areas detected by radar. Therefore, GOES sensors do not appear adequate for developing satellite rainfall estimation techniques to specify shallow mesoscale precipitation. GRA

RELATIONSHIPS BETWEEN SYNOPTIC STORM ACTIVITY AND SEA SURFACE TEMPERATURE ANOMALIES OVER THE NORTH PACIFIC OCEAN M.S. Thesis
Bauke H. Houtman Jun. 1981 83 p refs
(AD-A104590) Avail: NTIS HC A05/MF A01 CSCL 04/2

The significance of year-round relationships between synoptic storm activity and sea-surface temperature (SST) over the North Pacific Ocean for the period January 1969 through December 1978, were examined using cross-correlation analysis. The possible existence of a seasonal dependence in the SST-wind relationships was examined using sub-sample record cross-correlation analysis and model tests with both a constant and a variable mixed-layer depth, respectively. Wind forcing data was represented by (U-3*), friction velocity cubed, and wind stress curl (CURL sub Z tau), as computed from: (a) High-pass filtered wind components only (periods less than ten days), (b) High- and Low-pass filtered wind components which includes the interaction terms and (c) the unfiltered (total) wind components. TROPICAL STORM MOVEMENT BASED ON SYNOPTIC MAP TYPING USING EMPIRICAL ORTHOGONAL FUNCTIONS M.S. Thesis
Danley W. Brown Jun. 1981 81 p refs
(AD-A104591) Avail: NTIS HC A05/MF A01 CSCL 04/2

This initial study investigates the feasibility of using weather map types to forecast tropical storm/typhoon movement in the Western North Pacific Ocean. Fleet Numerical Oceanographic Center's hemispheric D-value analysis fields at 850, 700 and 500 mb are interpolated to a standard grid oriented relative to the present surface tropical storm position. Empirical Orthogonal Function (EOF) analysis is used to represent the fields in terms of only 10 coefficients in an effort to separate true synoptic map features from random noise. A least squares approach is then applied to determine characteristic synoptic patterns relative to the tropical storm, and to relate each individual cast to a 'map type'. An analog type approach is used to forecast the 30-, 36-, 54-, 60-, 78- and 84-hour positions. All storms determined to be of the same map type as the candidate storm were considered to be analogs, and their storm tracks were rotated to have the same past 12-hour movement. Forecast errors ranged from 135 n.mi. at 30 hours to 490 n.mi. at 84 hours. Although no independent cases were tested, and the techniques employed have not been optimized, the mean vector errors indicate that the basic technique warrants further investigation. Author (GRA)

AN OPEN-OCEAN MARINE FOG DEVELOPMENT AND FORECAST MODEL FOR OCEAN WEATHER STATION PAPA M.S. Thesis
Robert Louis Clark Jun. 1981 131 p refs
(AD-A104595; NPS68-81-005) Avail: NTIS HC A07/MF A01 CSCL 04/2

Marine fog forecasts during the summer period in the North Pacific are not made presently with any acceptable degree of accuracy. Objective fog development models exist and are used with some success for localized coastal regions of the western U.S.; scarcity of accurate data has hindered creation of a reliable open-ocean model. The Eulerian single-station approach, utilizing a segment of the complete accurate data of Ocean Weather Station Papa (50N, 145W) is applied in this study to an objective marine fog forecasting model. The time-series study of significant atmospheric variables at OWS Papa, when coupled with a chronological synoptic overview, delineates accurately fog/no fog sequences in the summer months of 1973 and 1977. Actual observed fog situations are evaluated by the general model and presented in relation to open-ocean fog indices, NOAA 5 satellite coverage and synoptic history. The open-ocean forecast model is tested on an independent data set for the month of July 1975 at OWS Papa, with favorable results. The research delineates four required indices that must all be positive to forecast fog. These indices, when plotted daily in the region of OWS Papa allow a single station to predict, with some confidence out to twenty-four hours, the occurrence of advection fog. Author (GRA)

ESTIMATES FOR THE PROBABILITIES OF SURFACE-TO-AIR CLOUD-FREE LINES-OF-SIGHT AND LOW CLOUD STATISTICS FROM SHIP OBSERVATIONS. PART 1: FIFTEEN MARINE LOCATIONS Progress Report, 1964 - 1971
B. S. Katz, F. C. DeBold, and J. J. Perez-Esandi 24 Nov. 1980 169 p refs
(ZF59551002)
(AD-A104633; NSWC/TR-78-143) Avail: NTIS HC A08/MF A01 CSCL 04/2

Estimates of the probability of cloud-free lines of sight (PCFLOS) were calculated for a set of nine angles using a modification of Lund and Shanklin's universal method from lower cloud weather data taken at fifteen marine locations. The data compilation covers periods from five to seven years (1964-1971) and provides statistics for seasonal variations of lower cloud base heights and cover and low cloud type and cover. Both the seasonal weather data (winter, spring, and summer) and the PCFLOS are tabulated for each location for nine different elevation angles from 10 to 90 degrees above the horizontal and for the heights for which lower cloud base data were available. The main assumption of the unmodified method, which is fully described in the text, is that the universal method can be applied successfully to the statistics for individual low cloud base height recording cells. Intermediate computational results corresponding to base height cells and the values of PCFLOS through all clouds, calculated by the unmodified method. Data from four selected locations were plotted for illustration and comparison purposes. PCFLOS statisfics for various angles and cloud base heights were related to ability to visually detect targets at various ranges, altitudes, and elevation angles, by means of graphs that precalculated the slant range. A summary of the weather statistics and PCFLOS for all stations is also included. Author (GRA)

THE WIND CLIMATOLOGY OF AMERICAN SAMOA

John C. Bortniak (Geophysical Monitoring for Climatic Change) Mar. 1981 72 p refs
(PB81-221012; NOAA-TM-ERL-ARL-98; NOAA-81050611) Avail: NTIS HC A04/MF A01 CSCL 04B

From an investigation of the tropical Pacific winds using previous work done in this area, three major sources of Samoa air were identified. The easterly trade winds are the most frequent source, and southerly air from the east of Australia occurs a large percentage of the time. The third source, occurring only a few percent of the time in the austral summer, is direct Northern Hemisphere air, which is normally blocked by the intertropical Convergence Zone. General features of tropical Pacific winds are also discussed. GRA

VARIATIONS IN CLIMATIC CHARACTERISTICS AS RELATED TO EVAPOTRANSPIRATION IN SOUTH PARK, CENTRAL PARK COUNTY, COLORADO Final Report

Norman E. Spahr 1981 161 p refs Prepared in cooperation with City of Denver
(PB81-219610; USGS/WRI-80-86; USGS/WRD/WRI/81-047) Avail: NTIS HC A08/MF A01 CSCL 04B

Data collected during May through September in 1977, 1978, and 1979 at three stations were analyzed using an analysis of variance technique to determine variations in climatic characteristics in South Park. Knowledge of these climatic characteristics will aid in determining the amount of water that may be transferred from agricultural use in South Park to municipal use in the Denver metropolitan area. Daily minimum air temperature, daily average air temperature, cumulative wind, daily relative humidity, and daily solar radiation were statistically different between the three stations at the 1-percent level of significance. Daily maximum air temperature and daily pan evaporation were not significantly different between the three stations. GRA

THE MEASUREMENT OF HEIGHT AND SLOPE OF ISOBARIC SURFACES WITH AN AIRBORNE RADAR ALTIMETER

E. N. Brown, C. A. Friehe, M. A. Shapiro, and P. J. Kennedy Dec. 1980 22 p refs
(Grant NSF ATM-77-23757)
(PB81-221632; NCAR/TN-160) Avail: NTIS HC A02/MF A01 CSCL 04B

The aeronautical use of electronic altimeters is to measure the absolute clearance of an aircraft above the Earth's surface. In support of atmospheric research, accurate high-range altimeters, in conjunction with accurate static pressure and navigation data can also provide a means for measuring the heights of constant-pressure surfaces. From the derivatives of the measurements, surface slopes and dynamical quantities such as the geostrophic wind may be obtained. The operational and research use of a high pulse-type radar altimeter system installed on the NCAB Sabreliner for jet stream research is described. GRA

INSTRUMENT INTERCOMPARISONS AT THE BOULDER ATMOSPHERIC OBSERVATORY DURING 1980
J. E. Gaynor and J. A. Korrell Mar. 1981 45 p refs
(PB81-220139; NOAA-TM-ERL-WPL-69; NOAA-81050610)
Avail: NTIS HC A03/MF A01 CSCL 04B

The three-axis Doppler bistatic sodar discussed in this report was a redesign of the system used in the BLIE. The tethersonde, essentially identical with that used in the BLIE, provided averages of about 5 min at nearly fixed levels corresponding to the BAO tower levels. Similar averages for the tower data were used for comparisons. The monostatic Doppler sodar also discussed in this report, was not previously tested at the BAO. The testing procedures followed those used in the BLIE, and the results from the three instruments are presented in similar format to the BLIE report, but in more detail. Added to the results is a brief discussion of the capabilities of a Doppler sodar in measuring vertical wind speed standard deviation using a limited set of data. GRA

NUMERICAL STUDIES OF HURRICANE-OCEAN INTERACTIONS Final Report
Richard A. Anthes Apr. 1981 54 p refs
(Grant NOAA-04-4-022-26)
(PB81-225575; NOAA-81050810) Avail: NTIS HC A04/MF A01 CSCL 04B

An axisymmetric, interacting model of the ocean and the atmosphere was developed to study the mutual response of the tropical cyclone and the ocean. The hurricane model with the high-resolution PBL model was coupled with an axisymmetric version of the mixed-layer ocean model. The combined model was integrated simultaneously for 24 h to investigate the mutual response of the two systems. The results suggest that appreciable weakening of a hurricane due to the cooling of the oceanic surface will not occur if it is translating at typical speed. GRA

DOPPLER RADAR DATA ANALYSIS DURING FISCAL YEAR 1980 Final Report
W. R. Moninger, R. Dineen, and T. Becker Mar. 1981 46 p refs
(PB81-225476; NOAA-TM-ERL-WPL-70; NOAA-81051409)
Avail: NTIS HC A03/MF A01 CSCL 04B

Two triple Doppler radar case studies are discussed. The first is of a post frontal band observed as it moved up the foothills of the Sierra Nevada mountains. The band structure was primarily helical, with inflow from the right front of the band at low levels, an updraft slightly behind the reflectivity core of the band, and outflow toward the left front. The band structure was similar to but smaller in scale than bands observed in the Sacramento valley. The second case is of a weak frontal passage followed by a strong squall line passage. The squall was intense enough to have an associated tornado, but was quite shallow. Reflectivity in the squall line was a maximum of 52 dBZ at 0.6 km msl, dropping to below 20 dBZ above 5.1 km msl. A MODEL OF TEMPERATURE STRATIFICATION FOR CORRECTION OF LEVELING REFRACTION
Sandford R. Holdahl Apr. 1981 35 p refs
(PB81-225435; NOAA-TM-NOS-NGS-31; NOAA-81051111)
Avail: NTIS HC A03/MF A01 CSCL 04B

Refraction causes leveled height differences to be too small. It is usually considered to be the largest known systematic error in leveling measurements amounting to as much as a cm/km. In 1937, long before refraction was widely accepted as a significant error source, a correction was developed. Few countries adopted the correction, but it is now realized that the correction is necessary, especially in the middle and lower latitudes. Removing refraction bias from old leveling measurements requires a temperature stratification model. The model described is based on historical records of solar radiation, sky cover, precipitation, and ground albedo from many locations in the conterminous United States. This modeling method can be adopted by any country with records of solar radiation. GRA

A COMPARISON OF TWO METHODS FOR FORECASTING THUNDERSTORMS AT LUKE AIR FORCE BASE, ARIZONA
Keith R. Cooley (Luke AFB, Ariz.) Apr. 1981 17 p refs
(PB81-225393; NOAA-TM-NWS-WR-163; NOAA-81051402)
Avail: NTIS HC A02/MF A01 CSCL 04B

A summary is presented of two studies for forecasting the occurrence of air-mass thunderstorms for the period 1 June through 30 September. The first is based on twelve years of upper-air data from Tucson and is referred to as the RAOB study. The second is based on three years of trajectory model data and is called the Trajectory study. At the present time the RAOB method does provide the forecaster an aid to forecasting thunderstorm activity at Luke Air Force Base, and is especially helpful to new forecasters assigned to the base. WORKBOOK FOR ESTIMATING THE CLIMATOLOGY OF REGIONAL CONTINENTAL SCALE ATMOSPHERIC DISPERSION AND DEPOSITION OVER THE UNITED STATES

Roland R. Draxler and Jerome L. Heffter Feb. 1981 210 p refs Sponsored by DOE
(PB81-224172; NOAA-TM-ERL-ARL-96; NOAA-81042704) Avail: NTIS HC A10/MF A01 CSCL 04B

A version of the Air Resource Laboratories' (ARL) regional trajectory model was developed to permit simultaneous calculation of trajectories from 70 hypothetical sources of very long periods. Five years of data were used to develop a climatology of atmospheric dispersion. Air concentrations were calculated at receptors coincident with the 70 source locations. Each source and receptor was treated independently to develop a source/receptor matrix that can be used to produce air concentration patterns over the U.S. for any combination of sources or to evaluate the impact of different sources on any receptor. Five-year averages of seasonal and annual air concentrations are given for various combinations of wet and dry deposition. Example calculations are shown. GRA

CONDITIONAL SAMPLING OF OCEANIC TEMPERATURE AND PRESSURE
James D. Irish, Wendell S. Brown, and Mark P. Woodbury 29 Jun. 1981 48 p
(Contract N00014-80-C-0351; Grant NSF OCE-78-26229)
(AD-A104539; TR-8101; UNH-SG-172) Avail: NTIS HC A03/MF A01 CSCL 08/1

In the ocean, as in the atmosphere, energy transfer processes exhibit a distinct intermittency. Important energy transfer events occur rarely in space and time but their contribution is likely to be greater than those from all others combined. For example, the most severe storms during a particular year are likely to be associated with a larger momentum and heat flux between the atmosphere and the ocean than the winds during the rest of the year. The breaking of an internal wave can lead to a greater vertical mixing of heat and salt than other diffusion processes. The presence of intermittency places severe demands on geophysical data acquisition. Routine sampling at fixed rates provide redundant data nearly all of the time and inadequate data during the rare times of an interesting event. A fixed program of intermittent rapid sampling superimposed on a standard low sampling rate (commonly referred to as burst sampling) is an improvement, but is not entirely satisfactory either. What is needed is a high rate of sampling conditioned by the occurrence of the rare important events or what will be referred here as conditional sampling. GRA

WAVE PROPAGATION OVER RECTANGULAR TRENCH
J. J. Lee and R. M. Ayer Dec. 1980 17 p refs
(Grant NSF ENV-77-01599)
(PB81-220782; NSF/RA-800544) Avail: NTIS HC A02/MF A01 CSCL 08C

Two dimensional, linearized potential flow was assumed. The fluid domain was divided into two regions along the mouth of the trench. Solutions in each region are expressed in terms of the unknown normal derivative of the potential function along this common boundary with the final solution obtained by matching. Reflection and transmission coefficients were found for various submarine geometries. The result shows that for a particular flow configuration, there exists an infinite number of discrete wave frequencies at which waves are completely transmitted. The validity of the solution in the infinite constant water depth region is shown by comparing with the results using a boundary integral method for given velocity distributions along the mouth of the trench. INDEX TO OBSERVATIONS OF CURRENTS IN PUGET SOUND, WASHINGTON, FROM 1908-1980
Jeffrey M. Cox, Curtis C. Ebbesmeyer, Carol A. Coomes, Laurence R. Hinchey, Jonathan M. Helseth, Glenn A. Cannon, and Clifford A. Barnes (Washington Univ., Seattle) Mar. 1981 62 p refs Prepared in cooperation with Evans-Hamilton, Inc.
(PB81-224115; NOAA-TM-OMPA-5; NOAA-81042703) Avail: NTIS HC A04/MF A01 CSCL 08C

In order to describe the characteristics of the circulation in two major basins of Puget Sound, Washington, a synthesis of historical current measurements are being undertaken. Nearly all the current observations taken throughout the Sound were collected. This report indexes 48.8 recorded years of Eulerian current observations generally one day or longer taken at nearly 300 sites from 1908-1980. The three major organizations taking measurements during this period were the National Ocean Survey, the University of Washington, and the Pacific Marine Environmental Laboratory. GRA

ON THE COMPUTATION OF BAROTROPIC TIDES IN DEEP ESTUARIES WITH APPLICATION TO KNIGHT INLET, BRITISH COLUMBIA
Bruno M. Jamart Oct. 1980 75 p refs
(Grant NA79AA-D-00054)
(PB81-220147; WSG-80-6; NOAA-81042910) Avail: NTIS HC A04/MF A01 CSCL 08C

Tidal motion in semi-enclosed basins is essentially periodic. Hence, the solution of the shallow water wave equations in Fourier space (or in terms of harmonic constituents) can be efficient alternative to the conventional time-stepping procedures. A numerical method based on that premise is described; the method combines variational calculus, an iterative scheme, and the finite element method to determine the spatial variations of the Fourier coefficients of water height and depth-averaged horizontal velocities. Computer results for the semidiurnal barotropic tidal flow agree fairly well with all available observations. GRA

TIME DEPENDENT MIXING IN A SALT WEDGE ESTUARY Ph.D. Thesis
Eric Newell Partch 1981 181 p
Avail: Univ. Microfilms Order No. 8121232

Measurements of the profiles of salinity and velocity at anchored stations in the Duwamish River estuary at both high and low river stages indicate that the turbulent mixing through the density interface is highly time dependent with the most intense mixing occurring at the maximum current speed during the ebb. Additional measurements of the turbulent kinetic energy and the turbulent flux of salt by the eddy correlation technique during low river discharge verify the interpretation. A lateral sampling experiment found that the intense mixing was concentrated in the center of the channel away from the flow boundaries. Echograms visualizing the interface showed it to be disturbed by waves with wavelengths of O(10m) and heights of O(1m) near maximum ebb. The interface was examined visually and found to be a thin(20-30cm) layer coinciding with a sharp thermocline. Dissert. Abstr.

AN INVERSE TECHNIQUE FOR DETERMINATION OF MEAN OCEAN CIRCULATION Ph.D. Thesis
Karl Chris Stengel 1981 274 p
Avail: Univ. Microfilms Order No. 8121248

A number of widely differing solutions can be obtained by minimization of the rms value of some linear function of the velocity. In this type of solution, the calculated velocity is shown to be a convolution of the true velocity with a so-called resolution function, which can be calculated and is ideally a delta function. Those solutions found include the minimum total (baroclinic plus barotropic) velocity and the minimum derivative velocity. The resolution functions that are associated with each solution, however, are very poor approximations to delta functions. It is much more fruitful to calculate bounds on parameters such as the average velocity. With this technique, the velocity is expected as a series in a set of expansion functions. The convolution of each function with the velocity produces, in turn, each desired parameter. From an estimate of the rms difference between the expansion and the true velocity, the parameters can be bound. Dissert. Abstr.

Male Wistar rates were kept hypokinetic by placing them in small containers for 22 days. Blood plasma cAMP content was subsequently found increased, and cGMP content decreased, in the experimental animals. Liver and thymus cAMP content was similar in the control and experimental animals. There was a 20 and 38% decrease of cAMP content in the kidneys and spleen, respectively. Hypokinesia's reduction of cyclic nucleotides seems to inhibit RNA and protein synthesis. Author

MECHANICAL IMPEDANCE OF THE HUMAN OUTER EAR

H. Els and J. Schroeter Feb. 1981 21 p refs Transl. into ENGLISH from Forschungsber. (West Germany), no. 238, 1980 (RAE-Lib-Trans-2065; BR80139) Copyright Avail: Issuing Activity

The lack of a quick, cheap and accurate method of measuring the attenuation provided by hearing protectors hampered the development of these devices. Many efforts to provide such a method involved the design of an objective test apparatus or 'artificial head'. A major drawback to this solution was the lack of detailed information about the mechanical characteristics of the skin/flesh layer at the point of contact between the protector and the head of a wearer. The measurement of the mechanical impedance of the skin/flesh layer of 100 subjects at four points in the circumaural region and at a point in the outer ear canal is described. The application of these data to the design of an artificial skin/flesh layer for use on an 'artificial head' is discussed. T.M.

AIRWAY GAS MIXING DURING REST AND BICYCLE EXERCISE Ph.D. Thesis

Deborah Marie Drechsler 1981 96 p
Avail: Univ. Microfilms Order No. 8120419

The increase in dispersion of an inert tracer bolus of helium or sulfur hexafluoride was used as a direct, non-invasive measure of longitudinal gas mixing in the conducting airways. Three types of experiments were performed. Firstly, inspiratory flow rate was varied between 0.2 and 1.8 l/s while the expiratory flow rate was held constant at 0.4 l/s. Measurements were made at penetration volumes (V) of 30, 90, and 150 ml, and tidal volume was 600 ml. The negative correlation of mixing with inspiratory flow rate at all three values of V suggests that airway gas mixing during inspiration is by turbulence. During the second group of experiments expiratory flow rate was varied from 0.2 to 2.5 l/s, and inspiratory flow rate was held constant at 0.4 l/s. The positive correlation of mixing with expiratory flow rate at all three values of V leads to the conclusion that airway gas mixing during expiration is by Taylor diffusion. The third group of experiments investigated the extent of cardiogenic gas mixing by comparing inert gas dispersion during bicycle ergometer exercise at 35 prcent V sub O2 max to that dispersion occurring with matched respiratory maneuvers at rest. Dissert. Abstr.

N82-11769 Rochester Univ., N. Y.

HUMAN LYMPHOCYTE CALCIUM METABOLISM Ph.D. Thesis

Andrew Harry Lichtman 1981 207 p
Avail: Univ. Microfilms Order No. 8122380

A technique was developed for measuring the calcium content of a small number of cells using a graphite furnace atomic absorption spectrophotometer. The sensitivity of the graphite furnace technique was 60 times higher and the detection limit was 1500 times lower than a conventional flame atomic absorption technique. The low detection limit of the graphite furnace technique permitted studies of calcium metabolism in the available numbers of human lymphocytes. In the absence of serum, the lymphocyte calcium content doubled as the medium calcium concentration was increased from 1 micro mol/l 0.5 mmol/l. At medium calcium concentrations of 0.5 mmol/l and above, the lymphocyte calcium content was 1.0 mmol/l cells. In medium adjusted 2 mmol/l calcium, the lymphocyte calcium content doubled as the medium serum concentration was increased from 0 to 2 percent. At medium serum concentrations of 2 percent and above, lymphocyte calcium content was 2 mmol/l cells. Dissert. Abstr.

LOGIC-CONTROLLED OCCLUSIVE CUFF SYSTEM Patent

Joseph T. Baker (Technology, Inc., Houston, Tex.), George W. Hoffler, Inventors (to NASA) (Technology, Inc., Houston, Tex.), and William N. Hursta Issued 13 Oct. 1981 6 p Filed 1 Jun. 1976 Supersedes N76-27839 (14 - 18, p 2369)
(NASA-Case-MSC-14836-1; US-Patent-4,294,261; US-Patent-Appl-SN-691647; US-Patent-Class-128-691; US-Patent-Class-128-327; US-Patent-Class-128-686) Avail: US Patent and Trademark Office CSCL 06B

An occlusive cuff system comprises a pressure cuff and a source of regulated compressed gas feeding the cuff through an electrically operated fill valve. An electrically operated vent valve vents the cuff to the ambient pressure. The fill valve is normally closed and the vent valve is normally open. In response to an external start signal, a logic network opens the fill valve and closes the vent valve, thereby starting the pressurization cycle and a timer. A pressure transducer continuously monitors the pressure in the cuff. When the transducer's output equals a selected reference voltage, a comparator causes the logic network to close the fill valve. The timer, after a selected time delay, opens the vent valve to the ambient pressure, thereby ending the pressurization cycle.

EFFECTS OF CURATIVE TREATMENT EMPHASIZING ENDURANCE TRAINING ON THE PERFORMANCE AND BLOOD PRESSURE OF HYPERTENSIVE AND NORMOTENSIVES

F. Worms (Sanitarium of the Governmental Hospital) Jun. 1981 20 p refs Transl. into ENGLISH from Dtsche. Gesundheitswesen, v. 35, no. 31, 1980 p 1207-1212 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76520) Avail: NTIS HC A02/MF A01 CSCL 06P

The problem of normal values of blood pressure after exercise taking into account the blood pressure at the end of the exercise test is discussed. Hypertensives showed a lower working capacity than normotensives. In normotensives, however, systolic blood pressure at the end of an exercise correlated well with the working capacity. After the endurance cure submaximal blood pressure was markedly lower in hypertensives with a striking dependence on the level of initial values. Systolic blood pressure at the end of an exercise test was not changed significantly. Most probably it is not possible to overcome this malregulation in hypertensives by endurance training alone. REMOTE MEDICAL DIAGNOSIS SYSTEM RMDS DESIGN REVIEW MEETING MINUTES Technical Report, Aug. - Oct. 1980

W. T. Rasmussen and I. Stevens Aug. 1981 86 p refs Conf. held at Washington, D.C., 27-28 Aug. 1980
(AD-A104555; NOSC/TD-464) Avail: NTIS HC A05/MF A01 CSCL 06/5

Contains the minutes of a design review meeting for the Remote Medical Diagnosis System (RMDS) held 27-28 August, 1980, at the Bureau of Medicine and Surgery (Department of the Navy), Washington, DC. These minutes reflect the discussions held and information exchanged at this review meeting. They paraphrase various discussions, and are not intended as complete verbatim minutes. This document also contains background and reference material on the RMDS project.

INTERCOMPARISON OF TECHNIQUES FOR THE NON-INVASIVE MEASUREMENT OF BONE MASS

S. H. Cohn 1981 14 p ref Presented at the 16th European Symp. on Calcified Tissue, Knokke, Belgium, 1981
(Contract DE-AC02-76CH-00016)
(DE81-029921; BNL-29958) Avail: NTIS HC A02/MF A01

A variety of methods are presently available for the measurement of both normal individuals and patients with metabolic disorders. Chief among these methods are radiographic techniques such as radiogrammetry, photon absorptiometry, computer tomography, Compton scattering and neutron activation analysis. In this review, the salient features of the bone measurement techniques are discussed along with their accuracy and precision. The advantages of the various techniques for measuring bone mass are summarized. Where possible, intercomparisons are made of the various techniques. DOE

DARTAB: A PROGRAM TO COMBINE AIRBORNE RADIONUCLIDE ENVIRONMENTAL EXPOSURE DATA WITH DOSIMETRIC AND HEALTH EFFECTS DATA TO GENERATE TABULATIONS OF PREDICTED HEALTH IMPACTS

C. L. Begovich, K. F. Eckerman, E. C. Schlatter, S. Y. Ohr, and R. O. Chester Aug. 1981 79 p refs
(Contract W-7405-eng-26)
(DE81-030434; ORNL-5692) Avail: NTIS HC A05/MF A01

The DARTAB computer code which combines radionuclide environmental exposure data with dodimetric and health effects data to generate tabulations of the predicted impact of radioactive airborne effluents is discussed. DARTAB is independent of the environmental transport code used to generate the environmental exposure data and the codes used to produce the dosimetric and health effects data. The human dose and risk calculations need not be added to every environmental transport code. Options are included in DARTAB to permit the user to request tabulation by various topics. DOE

MOLECULAR EVENTS BASIC TO CELLULAR RADIATION RESPONSE

G. M. Kolodny [1981] 23 p refs Prepared in cooperation with Beth Israel Hospital, Boston
(Contracts DE-AS02-76EV-03335; EY-76-S-02-3335)
(DE81-027898; DOE/EV-03335/T1; COO-3335-28) Avail: NTIS HC A02/MF A01

The initiation and control of the division process in normal cells to gain insight into changes caused by x-irradiation and neolasia was discussed. It is suggested that small molecular weight RNA acts as primer for new RNA synthesis by hybridizing with DNA and there initiating the transcription of a new RNA chain. It is indicated that small molecular weight RNA will induce the production of new proteins. It is demonstrated RNA taken up from the media by cells in culture and induce in vitro the production of differential cell products. DOE

ALTERED TISSUE REACTIVITY AND INTERACTIONS BETWEEN CHEMICALS

H. P. Witschi 1981 33 p refs Presented at NRC Workshop on Multichem. Contamination, Milan, 27 Apr. 1981
(Contract W-7405-eng-26)
(DE81-023189; CONF-810491-1) Avail: NTIS HC A03/MF A01

The interaction between chemicals which modify the biological response if exposure is simultaneous or sequential was explored. Two different situations are distinguished where interactions are caused by sequential exposure: (1) a first agent acts as an inducer or inhibitor of mixed function oxidases, this alters the response to a second, challenging agent and the nature of the biological response, is dicated by the second agent; and (2) a first agent produces slight or undetected or undetectable changes in a tissue, exposure to a second agent enhances or allows expression of the biological response determined by the first agent. Both types of interactions require an ordered sequence of exposure to two chemicals and complex dose effect and time effect relationships. DOE

OZONE EXPOSURE AND PULMONARY METABOLIC EFFECTS OF MEDIATORS AND HORMONES Final Report, 20 Nov. 1976 - 31 Aug. 1980
Ibert C. Wells Jul. 1981 25 p
(Grant EPA-R-804585)
(PB81-222408; EPA-600/1-81-051) Avail: NTIS HC A02/MF A01 CSCL 06T

Several physiological effects of ozone exposure involving smooth muscle contracting substances were studied. The exposure of rats to ozone concentrations of 0.5 or 1.0 ppm for 4.0 hours produced the following effects in their lungs: (1) the release of prostaglandin F2 alpha and thromboxane A2 (2) increased the angiotensin converting enzyme activity, and (3) decreased the uptake of serotonin from the blood. Histamine and slow reacting substance of anaphylaxis were not released nor was the histamine forming capacity of the lung altered. Succinoxidase activity decreased by short exposure to ozone and increased by long exposure. GRA

CARBON/GRAPHITE FIBERS: ENVIRONMENTAL EXPOSURES AND POTENTIAL HEALTH IMPLICATIONS
Ralph D. Zumwalde and Lowell T. Harmison 12 Dec. 1980 21 p refs
(PB81-229692; IWS-52.3) Avail: NTIS HC A02/MF A01 CSCL 06J

Health effects related to carbon (7449440), and graphite (7782425) fiber exposure are discussed. Industrial production of the fibers is reviewed. Data on fiber release and particle size is included. The results of epidemiological and animal toxicologic studies with fibrous glass (14808607), rock wool wollastonite (13983170), fibrous clay, asbestos (1332214) and carbon fibers are described. Animal toxicity tests based on fiber size, deposition pattern and cause of death are recommended. The synergistic effect between carbon/graphite fiber exposure and cigarette smoke also should be studied. Worker exposures to these fibers should be kept as low as possible and managed in the same way as exposure to fibrous glass. GRA

INVESTIGATION OF SPATIAL DISORIENTATION OF F-15 EAGLE PILOTS Final Report, 15 Jan. - Aug. 1980
Dennis W. Jarvi Aug. 1981 72 p refs
(AD-A104684; ASD-TR-81-5016) Avail: NTIS HC A04/MF A01 CSCL 05/8

An extensive investigation, including F-15 pilot interviews at Eglin AFB FL, and Langley AFB VA, into the characteristics and operation of the F-15 Eagle was conducted over a seven month period. In addition, F-16 pilots at Hill AFB UT, were interviewed. The following conclusions were drawn from the information acquired: The F-15 does not possess any unusual flight handling characteristics that could lead to pilot spatial disorientation. The large bubble canopy and the pilot's sitting height in the cockpit generally do not appear to significantly contribute to spatial disorientation. The asymmetrical exterior lighting strips on the F-15 can cause confusion on the part of the wing man regarding his formation position relative to the lead aircraft or the bank angle of the lead aircraft. Night formation join-ups, particularly from the stern, are rather difficult for the F-15 pilot due to the absence of adequate exterior lighting to provide the necessary depth perception cues for ascertaining the range and attitude of the lead aircraft. The layout of the F-15 cockpit generally manifests adherence to good human factors design principles. The F-15 Spatial Disorientation Team also uncovered some areas of potential pilot distraction. These areas, uncovered during pilot interviews, do not necessarily affect the incidence of spatial disorientation, but may add to the F-15 pilot's workload. The report includes these areas, and also makes a number of recommendations based on the results of the study. GRA

RECOMMENDED GUIDELINES FOR OXYGEN SELF-

RESCUERS. VOLUME 1: UNDERGROUND COAL MINING Progress Report, Aug. 1979 - Dec. 1980
D. Randolph Berry and Donald W. Mitchell Jun. 1981 52 p 2 Vol.
(Contract DI-BM-J0199118)
(PB81-225872; BM-OFR-86(1)-81-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 08I

The Bureau of Mines awarded a contract for the provision of recommendations on the safest, most practical methods for complying with new regulations requiring that all underground coal miners have a self-contained, self rescuer (SCSR) -- a device capable of supplying, in an emergency, 1 hour of self-contained oxygen (no breathing of mine air). Information and recommendations that could be used during the early stages of nationwide compliance, especially in the areas of inspection, testing, and underground storage os SCSR's, are presented. An executive summary, introduction, definitions, recommended guidelines for district managers and mine operators, and a storage plan checklist and sample form are provided. GRA

SPACE SHUTTLE MAIN ENGINE CONTROLLER
Russell M. Mattox and J. B. White Nov. 1981 40 p refs
(NASA-TP-1932; M-360) Avail: NTIS HC A03/MF A01 CSCL 09B

A technical description of the space shuttle main engine controller, which provides engine checkout prior to launch, engine control and monitoring during launch, and engine safety and monitoring in orbit, is presented. Each of the major controller subassemblies, the central processing unit, the computer interface electronics, the input electronics, the output electronics, and the power supplies are described and discussed in detail along with engine and orbiter interfaces and operational requirements. The controller represents a unique application of digital concepts, techniques, and technology in monitoring, managing, and controlling a high performance rocket engine propulsion system. The operational requirements placed on the controller, the extremely harsh operating environment to which it is exposed, and the reliability demanded, result in the most complex and rugged digital system ever designed, fabricated, and flown. AUTOMATIC MULTI-BANKING OF MEMORY FOR MICRO-PROCESSORS Patent Application
Gordon A. Wiker, Inventor (to NASA) (JPL, California Inst. of Tech., Pasadena) Filed 7 Aug. 1981 19 p
(Contract NAS7-100)
(NASA-Case-NPO-15295-1; US-Patent-Appl-SN-291645) Avail: NTIS HC A02/MF A01 CSCL 09B

A microprocessor system is provided with added memories to expand its address word length capacity by using indirect addressing instructions of a type having a detectable operations code and dedicating designated address spaces of memory to each of the added memories, one space to a memory. By decoding each operations code of instructions read from main memory into a decoder to identify indirect addressing instructions of the specified type, and then decoding the address that follows in a decoder to determine which added memory is selectively enabled to permit the instruction to be executed on the location to which the effective address of the indirect address instruction points, either before the indirect address is read from main memory or afterwards, depending on how the system is arranged by a switch. FIDELITY OPTIMIZATION OF MICROPROCESSOR SYSTEM SIMULATIONS M.S. Thesis Auburn Univ.
Earnest Taylor-Landrum, Jr. Mar. 1981 119 p refs
(AD-A104679; AFIT-CI-81-3T) Avail: NTIS HC A06/MF A01 CSCL 09/2

The development of a microprocessor system simulation that would accurately portray the operation of the system at a very fine level of detail was studied. This optimization in the area of fidelity was broken into three tasks. A preprocessor program was written to improve the operator interface to an existing simulation driver program. An existing microprocessor simulation, designed to run under the simulation driver program, was extensively modified to reflect actual machine level operations rather than abstract level functions. A simulation of a programmable parallel interface was developed and mated to the microprocessor simulation. Examples and possibilities for system level simulation are discussed and analyzed. ARCHITECTURE TUNING OF A REAL-TIME SIGNAL

SORTER IN A DENSE ENVIRONMENT Interim Report

T. R. Husson, R. H. Evans, L. H. Moffett, and A. M. Abdalla 11 Sep. 1981 34 p
(AD-A104524; NRL-8495) Avail: NTIS HC A03/MF A01 CSCL 09/2

This report describes the results of a study of the architecture of a real-time signal sorting system. The purpose of the signal sorter is to process and identify the outputs of a radar receiver. The problems of high data rates and uncertain environment characteristics require an adaptive system. The study began with a previously designed signal sorting architecture and the effects of various dynamic architecture tuning schemes on that system were analyzed. Author (GRA)

THE CROSSTIE RANDOM ACCESS MEMORY (CRAM). PART 1: THE CONCEPT AND INITIAL STUDIES

Leonard J. Schwee, Paul E. Hunter, Kathleen A. Restorff, and Mary T. Shephard 8 Jun. 1981 40 p refs
(WF62582000)
(AD-A104543; NSWC/TR-81-213-Pt-1) Avail: NTIS HC A03/MF A01 CSCL 09/2

This is the first annual technical report of progress toward a crosstie random access memory. This marks a recent change in direction from the previously studied serial access memory. The more pertinent information learned from the serial memory approach which applies to the CRAM is repeated here. However, previous reports contain much additional important information and can be obtained by writing to the authors. It was realized at NSWC that the crosstie memory elements could be reorganized into a random access memory and that this approach would eliminate some propagation problems which resisted easy resolution. At the same time, a much higher performance memory would result with higher expected reliability. Consequently, efforts at NSWC are being concentrated on the CRAM. GRA

MULTIPLE-INSTRUCTION, MULTIPLE-DATA PATH COMPUTERS: PARALLEL PROCESSING IMPACT ON FLIGHT SIMULATION SOFTWARE Final Report

Robert E. Lord, Swarn Kumar, and Rodney A. Schmidt Aug. 1981 101 p refs Prepared in cooperation with Washington State Univ., Pullman
(Contract F33615-79-C-0009; AF Proj. 6114)
(AD-A104506; AFHRL-TR-80-64) Avail: NTIS HC A06/MF A01 CSCL 09/2

The purpose of this study was to evaluate the parallel processing impact of MIMD (Multiple-Instruction Multiple-Data Path) computers on Flight Simulation Software. Basic mathematical functions and arithmetic expressions from typical Flight Simulation Software were selected and run on a MIMD computer to evaluate the improvement in execution time that results from the parallel architecture of this type of computer. Recommendations as to the types of tasks which are optimally suitable for this computer architecture are made, together with the improvement in execution speed to be expected. Author (GRA)

DISTRIBUTED COMPUTATION OF FIXED POINTS

Dimitri P. Bertsekas Aug. 1981 18 p refs
(Contract N00014-75-C-1183; NR Proj. 049-383)
(AD-A104418; LIDS-P-1135) Avail: NTIS HC A02/MF A01 CSCL 09/2

We present an algorithmic model for distributed computation of fixed points whereby several processors participate simultaneously in the calculations while exchanging information via communication links. We place essentially no assumptions on the ordering of computation and communication between processors thereby allowing for completely uncoordinated execution. We provide a general convergence theorem for algorithms of this type, and demonstrate its applicability to several classes of problems including the calculation of fixed points of contraction and monotone mappings arising in linear and nonlinear systems of equations, shortest path problems, and dynamic programming. COMPUTER PERFORMANCE PREDICTION OF A DATA FLOW ARCHITECTURE M.S. Thesis

David John Hogen Jun. 1981 92 p refs
(AD-A104587) Avail: NTIS HC A05/MF A01 CSCL 09/2

Supercomputers capable of performing extremely high speed computation have been proposed which are based on an architecture known as data flow. Application of a Petri net-based methodology is used to evaluate the performance attainable by such an architecture. The architecture evaluated is MIT's cell block data flow architecture which is being developed to execute the applicative programming language VAL. Results show that for the data flow architecture to achieve its goal of high speed computation, intelligent multiprogamming schemes need to be developed. One such scheme, based on the notion of a 'concurrency vector', is introduced. Author (GRA)

A BACK-END DATA MANAGEMENT EXPERIMENT Final Report

Michael A. Wallace Sep. 1981 75 p refs
(TF5351019)
(AD-A104579; DTNSRDC-81/067) Avail: NTIS HC A04/MF A01 CSCL 09/2

A test system was developed under contract to demonstrate the feasibility of the back-end processor approach. This system was installed on the PDP 11/70 (back-end processor) and tested for validity and performance. This test effort, sponsored primarily by NAVSUP, was to determine whether the originally perceived benefits could be realized and the disadvantages minimized. The perceived benefits were: reduced disk space; reduced main memory for application programs; reduced CPU time for application programs; increased data security; increased host utilization by linking several hosts to one back-end processor; independence of the DBMS from the host processor; and extend the useful life cycle of the host by freeing system resources. The known disadvantages are: an additional computer to operate and maintain; a communications link to maintain, and a development, implementation, and maintenance software effort on two machines. The system implementation, testing methodology, analysis of results, and conclusions/recommendations are discussed in this report. GRA

EFFICIENT METHODS FOR CALCULATING THE SUCCESS FUNCTION OF FIXED-SPACE REPLACEMENT POLICIES M.S. Thesis
Frank Olken May 1981 30 p refs
(Contract W-7405-eng-48)
(DE81-029847; LBL-12370) Avail: NTIS HC A03/MF A01

Efficient methods are discussed for calculating the success function of replacement policies used to manage very large fixed size caches. Such problems arise in studying the caching of files on disk. A class of replacement policies is characterized which makes it possible to evaluate the success function for a single cache size in time O(n(*)log(s)), where n is the number of memory references in the trace and s is the size of cache. An algorithm is constructed to evaluate the success function for the least recently used replacement policy in time O(n(*)log(s)), for cache sizes smaller than s. This algorithm runs in bounded memory, O(s). It is also shown how to modify Bennett and Kruskal's algorithm to run in bounded space. The two algorithms have the same asymptotic running times (within a constant factor). Measured running times for the classic least recently used algorithm, (Bennett and Kruskal's algorithm) and the new algorithm are compared. The impace of variable size segments (files, rather than fixed size pages), and deletions on algorithms for calculating success functions is considered. DOE

SAR PROCESSING ON THE MPP Final Report, 9 Jan. - 31 Aug. 1981
K. E. Batcher, E. E. Eddey, R. O. Faiss, and P. A. Gilmore Aug. 1981 88 p refs
(Contract NAS5-26430)
(NASA-CR-166726; GER-17020) Avail: NTIS HC A05/MF A01 CSCL 09B

The processing of synthetic aperture radar (SAR) signals using the massively parallel processor (MPP) is discussed. The fast Fourier transform convolution procedures employed in the algorithms are described. The MPP architecture comprises an array unit (ARU) which processes arrays of data; an array control unit which controls the operation of the ARU and performs scalar arithmetic; a program and data management unit which controls the flow of data; and a unique staging memory (SM) which buffers and permutes data. The ARU contains a 128 by 128 array of bit-serial processing elements (PE). Two-by-four surarrays of PE's are packaged in a custom VLSI HCMOS chip. The staging memory is a large multidimensional-access memory which buffers and permutes data flowing with the system. Efficient SAR processing is achieved via ARU communication paths and SM data manipulation. Real time processing capability can be realized via a multiple ARU, multiple SM configuration. M.G.

This dissertation characterizes the operationalization of advice as a series of problem transformations leading from the advice statement to a procedure for achieving a specified goal (avoid taking points) or evaluating a specified quantity (decide whether an opponent is void). It describes some general operators for performing such transformations. These operators have been implemented in a program called FOO as domain-independent transformation rules that access a knowledge base of task domain concepts. They have been used to operationalize advice for the card game Hearts and a music composition task. Some of FOO's transformation rules represent high-level strategies for operationalizing advice. Additional rules represent reasoning methods used to reformulate advice in terms of these operationalization strategies, solve the subproblems they generate, and translate their results into a usable form. Although FOO lacks a problem-solving component for choosing which of these transformation rules to apply, the dissertation shows how means-end analysis could be used to guide the search through the problem space. The dissertation formalizes the notion of reformulating one concept in terms of another, for example, reformulating 'take points' in terms of 'playing the highest card in the suit led.' It describes mechanical techniques for mapping domain-specific problems onto general methods. In particular, it examines in detail the process of formulating a problem as a heuristic search, and presents domain-independent rules that improve a search procedure by deriving new heuristics based on analysis of the problem and knowledge about the task domain. OBJ-1: A STUDY IN EXECUTABLE ALGEBRAIC FORMAL SPECIFICATION Final Report

Joseph A. Goguen and Jose Meseguer Jul. 1981 66 p refs
(Contract N00014-80-C-0296; NR Proj. 049-466; SRI Proj. 1350-100)
(AD-A104468) Avail: NTIS HC A04/MF A01 CSCL 09/2

The goal of this research has been to develop a formal and executable algebraic specification language which can be used to specify a variety of application programs, such as database systems, compilers and interpreters for programming languages, and business systems. An advantage of formality in this context is that each specification has a unique unambiguous meaning, so that it is actually meaningful to ask whether or not a given program in fact satisfies a given specification. An advantage of executability is that test cases can be run directly on the specification, to examine properties of programs before they are written, and to help in debugging specifications. The latter is important because large specifications, like large programs, are usually wrong as first written. We have been investigating the utility of a number of potential advantages of the algebraic approach, including the following: Achievement of a high level of modularity in a natural way; Achievement of a high level of abstraction in a natural way; The possibility of executing test cases; User definition of data types and control structures, using any desired syntax, including pre-fix, post-fix, and 'mix-fix' operators, as well as coercions; The specification of error and exception conditions, as well as their handling, and recovery; The use of parameterized abstract modules as a method for structuring specifications; Algorithms for checking consistency and other desirable properties of specifications (e.g., the Knuth-Bendix algorithm); and Provision of a completely rigorous semantics for all these features. This report presents the results of a one-year study of Independent Verification and Validation (IV&V) results. Five large IV&V projects are examined to determine the effects of IV&V on software reliability, maintainability, and development cost/productivity. Current literature relevant to these topics is surveyed. IV&V-detected anomalies are categorized as to location, error category, effect, severity, acceptance, and resolution. Differences in project results are used to formulate recommendations for improving IV&V effectiveness. Author (GRA)

ELEMENTS OF PROGRAMMING LINGUISTICS. PART 1: THE LAMBDA CALCULUS AND ITS IMPLEMENTATION

Bruce J. MacLennan 13 Aug. 1981 95 p
(Contract N00014-81-WR-10034; RR0000110)
(AD-A104345; NPS52-81-012-Pt-1) Avail: NTIS HC A05/MF A01 CSCL 09/2

The lambda calculus is used as an introduction to programming language concepts, particularly the concepts of functional programming. Both interpreted and compiled implementations of an extended lambda calculus are discussed. They can be adopted to implementations of Pascal and Lisp. It is shown that traditional stack-based run-time structures can be directly derived from the reduction rules of the lambda calculus. Author (GRA)

THE EFFECTS OF THE SYMBOLOGY AND SPATIAL ARRANGEMENT OF SOFTWARE SPECIFICATIONS IN A DEBUGGING TASK

Sylvia B. Sheppard, John W. Bailey, and Elizabeth Kruesi Aug. 1981 47 p refs
(Contract N00014-79-C-0595; NR Proj. 196-190)
(AD-A104541; TR-81-388200-4) Avail: NTIS HC A03/MF A01

This report describes the third in a series of experiments to evaluate the effects of the format of software specifications on programmer performance. The current experiment examined performance on a debugging task. Thirty-six professional programmers were presented with specifications for each of three modular-sized programs. Nine different specification formats were prepared for each program. These formats varied along two dimensions: type of symbology and spatial arrangement. The type of symbology included natural language, constrained language (PDL), and ideograms (flowchart symbols). The spatial arrangement included sequential (vertical flow), branching (flowchart), and hierarchical (tree-like). The participants compared correct specifications to error-seeded program listings. Their task was to locate the several errors per program and to correct the errors using a text editor. The program output was checked automatically and a message informed the participants whether the output was correct or incorrect. The participants were asked to continue debugging until all errors had been located and corrected. The difficulty of the debugging task was measured by the time required to detect and correct the errors and by the number of submissions required for a correct run. GRA

SECOND IMAGE GENERATION/DISPLAY CONFERENCE: CLOSING COMMENTS Final Report

Earl A. Alluisi Jul. 1981 62 p refs Conf. held at Phoenix, Ariz., 10-12 Jun. 1981
(AF Proj. 9983)
(AD-A104676; AFHRL-TP-81-28) Avail: NTIS HC A04/MF A01 CSCL 09/2

The paper briefly outlines the objectives and accomplishments of the conference and acknowledges the contributions of some specific individuals. The paper then addresses the state-of-the-art in image generation/display for flight simulation, which was the substantive area of the conference. In this regard, the paper discusses the AFHRL Advanced Simulator for Pilot Training (ASPT), its history, and its application to specific training areas such as conventional dive bomb tasks and low-angle strafe, using the A-10 configuration of the ASPT. Some experimental results are reported. Research and development (R and D) on the ASPT is now advancing to air combat mission training (CMT). The paper describes what is involved in realizing state-of-the-art CMT; namely, (1) a data base collection system, (2) an image generation system, and (3) a crew interface/display system. The status of AFHRL R and D in each of these areas is presented. Finally, the need for addressing real and potential impacts of successful R and D in credible, quantitative terms is emphasized. A 'notional' CMT impact analysis is provided to show how R and D organizations can present options to Air Force management-options through which they can increase the ease and probability of air combat success. CONDITION RECOGNITION FOR A PROGRAM SYNTHESIZER M.S. Thesis
Joseph Shawn Lape and Charles Wayne Miller Jun. 1981 147 p refs
(AD-A104586) Avail: NTIS HC A07/MF A01 CSCL 09/2

An enumeration algorithm which synthesizes programs from example computations is presented. The algorithm, originally proposed by Alan W. Biermann of Duke University, assigns a labelling of the instructions contained in an example trace consistent with producing minimum state Moore machine representations for the synthesized programs. Techniques for processing the information to reduce enumeration are given. Biermann's algorithm is extended by trace preprocessing techniques which identify and generalize conditions on instruction sequencing in the synthesized programs without the user's assistance. The techniques are presented using text editing as the domain, but are general enough to be extendable into other domains. Author (GRA)

PROGRAMMING WITH A RELATIONAL CALCULUS
Bruce J. MacLennan 3 Sep. 1981 45 p refs
(RR0000110)
(AD-A104650; NPS52-81-013) Avail: NTIS HC A03/MF A01 CSCL 09/2

This report describes the concept of programming in a relational calculus. This is a style of programming in which entire relations are manipulated rather than individual data, and in which the program itself is represented as a relation. Thus relational programming is more general than functional programming in three respects. First, it is more general because relations subsume functions. Second, it is more general because the same objects, viz. relations are used to represent both the program and the data. Finally, since complex data structures are easily represented as relations, relational programming can manipulate with facility a much wider class of structures that other very-high-level languages. SOFTWARE DESIGN OF A GENERAL PURPOSE DATA ACQUISITION AND CONTROL EXECUTIVE
William G. Labiak and Earl G. Minor 22 May 1981 5 p refs Presented at Topical Conf. on Computerized Data Acquisition in Particle and Nucl. Phys., Oak Ridge, Tenn., 28-30 May 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-026573; UCRL-85669; CONF-810523-9) Avail: NTIS HC A02/MF A01

The software design of an executive which performs general purpose data acquisition, monitoring, and control is presented. The executive runs on a memory-based mini- or micro-computer and communicates with a disk-based computer where data analysis and display are done. The executive design stresses reliability and versatility, and yields software which can provide control and monitoring for widely different hardware systems. Applications of this software on two major fusion energy experiments are described. DOE

GRAMPS: A GRAPHICS LANGUAGE INTERPRETER FOR REAL TIME, INTERACTIVE, THREE DIMENSIONAL PICTURE EDITING AND ANIMATION
T. J. ODonnell and Arthur J. Olson Aug. 1981 11 p refs Presented at the SIGGRAPH 81 Meeting, Dallas, 3-7 Aug. 1981
(Contract W-7405-eng-48; Grant NSF CHE-77-21305)
(DE81-027398; LBL-12492; CONF-810805-6) Avail: NTIS HC A02/MF A01

An overview of the GRAMPS command structure is given and several examples of application of the language to molecular modeling and animation are presented. The GRAMPS language syntax allows natural interaction with scene elements, interactive assignment of graphics input devices, as well as facilitates the creation, manipulation and copying of complex nested picture structures. The language has a powerful macro feature that enables graphics commands to be developed and incorporated interactively. Animation is achieved in GRAMPS by two different, yet mutually compatible means. Picture structures may contain framed data, which consist of a sequence of fixed objects. These structures may be displayed sequentially to give a traditional frame animation effect. In addition, transformation information on picture structures may be saved at any time in the form of macro commands that transform these structures from one saved state to another in a specified number of steps, yielding an interpolated transformation animation effect. DOE

N82-11812# California Univ., Livermore. Lawrence Livermore Lab.
RATFIT: A RATIONAL EQUATION-OF-STATE FITTING PROGRAM
F. N. Fritsch Mar. 1981 40 p refs
(Contract W-7405-eng-48)
(DE81-027273; UCID-19097) Avail: NTIS HC A03/MF A01

The rational equation of state fitting program (RATFIT) fits an eleven-parameter equation of state of the form P(mu, epsilon) = A (mu) + B (mu) epsilon + C (mu) epsilon(2), /1+(D sub o) epsilon where A and B are cubic polynomials and C is quadratic, to (mu,P)-data given along the Hugoniot and/or the principal adiabat. It can also include data for gamma=(delta P/delta epsilon)/(mu + 1) along the abiabat. The user may weight individual points arbitrarily and fix any (or all) of the parameters at specified values. Printed and plotted output is available along the Hugoniot and adiabat associated with the equation of state. DOE

GUIDE TO THE DATA-ACQUISITION SOFTWARE OF THE DOUBLET III COMPUTER SYSTEM
B. B. McHarg Dec. 1980 73 p refs
(Contract DE-AT03-76ET-51011; Gen. Atomic Proj. 3344)
(DE81-026616; GA-A-16134) Avail: NTIS HC A04/MF A01

A guide to the software of the Doublet 3 data acquisition system is presented and the interactions of the computer codes with each other as well as with data base files, data files, and global tables, are discussed. Detailed descriptions of these files and tables are given along with methods of modification. The Doublet 3 Tokamak fusion experiment acquires, processes and archives over two megabytes of experimental data from each Tokamak shot, which occurs every five to seven minutes. The computer codes that accomplish this acquisition begin execution immediately on reboot of the computer system and continue throughout the preacquisition stage before a Tokamak shot, the actual acquisition stage when the shot is fired, and the post acquisition or analysis stage. H-O PRECESSOR COMPUTER CODE
Olin B. vanDyck and Richard A. Floyd May 1981 43 p refs
(Contract W-7405-eng-36)
(DE81-026669; LA-8804-MS) Avail: NTIS HC A03/MF A01

The computer program used to predict the system performance of a prototype spin precessor using H(-) to H(O) stripping, followed by small precession magnets is described. Starting with a user-defined input beam and magnet system, the program calculates and graphs the beam polarization along the beam axis. Alternatively, the program can plot the polarization at fixed position as a function of the magnet field strength. The performance of the system was studied using the code. The fundamental physics of a system of spins with hyperfine coupling in a magnetic field are described along with many examples of beam behavior as calculated by the program. DOE

COMPUTER PROCESSING OF PERIODIC ELECTRON MICROGRAPHS Ph.D. Thesis
Kirk Harvy Shelley 1981 245 p

Avail: Univ. Microfilms Order No. 8120464

Real image manipulation and harmonic analysis were combined in an attempt to extract the information contained in an electron micrograph. This type of analysis both simplified the image and quantified it to allow for easier interpretation. All the images studied were obtained from molecular aggregations with high degrees of intermolecular symmetry. Initially, electron micrographs produced from protein microcrystals were studied. These proteins included pig pancreas alpha-amylase, B. subtilis alpha-amylase, canavalin, and abrin. A series of low resolution (2.0 to 1.5 nm) electron density projections of the protein molecule were produced. These projections allowed for the unambiguous placement of the molecules within the unit cell. From the projections, molecular dimensions and volumes could also be estimated. The application of computer image processing techniques to the electron micrographs of cellular crystalline inclusions is discussed. Dissert. Abstr.

COMPARISONS OF SOME LARGE SCIENTIFIC COMPUTERS

Karen R. Credeur Oct. 1981 38 p refs

(NASA-TM-81928) Avail: NTIS HC A03/MF A01 CSCL 09B

In 1975, the National Aeronautics and Space Administration (NASA) began studies to assess the technical and economic feasibility of developing a computer having sustained computational speed of one billion floating point operations per second and a working memory of at least 240 million words. Such a powerful computer woild allow computational aerodynamics to play a major role in aeronautical design and advanced fluid dynamics research. Based on favorable results from these studies, NASA proceeded with developmental plans. The computer was named the Numerical Aerodynamic Simulator (NAS). To help insure that the estimated cost, schedule, and technical scope were realistic, a brief study was made of past large scientific computers. Large discrepancies between inception and operation in scope, cost, or schedule were studied so that they could be minimized with NASA's proposed new compter. The main computers studied were the ILLIAC IV, STAR 100, Parallel Element Processor Ensemble (PEPE), and Shuttle Mission Simulator (SMS) computer. Comparison data on memory and speed were also obtained on the IBM 650, 704, 7090, 360-50, 360-67, 360-91, and 370-195; the CDC 6400, 6600, 7600, CYBER 203, and CYBER 205; CRAY 1; and the Advanced Scientific Computer (ASC). A few lessons learned conclude the report. Author

MATHEMATICAL INVESTIGATION OF LINEAR CONTROL SYSTEMS CONTAINING INPUT DERIVATIVES Ph.D. Thesis

Nazar Al-Nasr 1981 88 p

Avail: Univ. Microfilms Order No. 8121679

The simplest type of generalized inverses of matrices known as the (1)-inverse is used to investigate two problems in linear time-invariant multivariable systems that contain input derivatives. The first is the zero-in problem. This problem of finding zeros and zero directions of the system boils down to solving a generalized eigenvalue problem which under certain conditions can be reduced to an ordinary eigenvalue problem or to a simpler generalized eigenvalue problem by the aid of three theorems given in the second chapter. The other is the eigenvalue assignment problem. This is concerned with finding a constant feedback matrix that will result in a closed loop system having a prescribed set of desired eigenvalues. UPWIND DIFFERENCE SCHEMES FOR HYPERBOLIC SYSTEMS OF CONSERVATION LAWS Ph.D. Thesis

Frederick William Solomon 1981 90 p

Avail: Univ. Microfilms Order No. 8122848

An extension of a shock capturing scheme is applied to well known systems found in fluid mechanics. Further as the scalar scheme possesses many desirable properties among them stability, monotinicity, and sharp profiles for steady shocks numerical experiments were performed to see how well these properties carry over to this extension for systems. Indeed numerical results were generated with the emphasis on viewing scheme stability and sharpness of shock profiles. Also for the scheme applied to the two dimensional isentropic Euler equations, there was great interest in the schemes performance with respect to oblique steady shocks (oblique w.r.t. the grid). Thus steady shock sharpness as a function of shock angle was viewed. The results indicate stability and profile sharpness for steady shocks for the one dimensional versions of the scheme. Further, the two dimensional results indicate that oblique steady shocks maintain sharp profiles in time regardless of the shock angle. Dissert. Abstr.

N82-11821 Rutgers - The State Univ., New Brunswick, N. J.

CHARACTERS OF RANK TWO HYPERBOLIC LIE ALGEBRAS AS FUNCTIONS AT QUASIREGULAR CUSPS Ph.D. Thesis

Arne Erik Meurman 1981 132 p

Avail: Univ. Microfilms Order No. 8122102

Using the Weyl-Kac character formula and the process of principal specialization, it is shown that the characters have poles when extended to meromorphic functions. Thus the expansion in terms of characters is genuinely local. The result that the rank two hyperbolic Lie algebras have exponential growth is also derived in the process. Dissert. Abstr.

N82-11822 Kentucky Univ., Lexington.

PARTIAL DIFFERENTIAL EQUATIONS FROM DYNAMIC PROGRAMMING EQUATIONS Ph.D. Thesis

Suzanne Marie Lenhart 1981 126 p
Avail: Univ. Microfilms Order No. 8121611

Equations which arise in stochastic optimal control theory were examined. The goal was to investigate these problems by analytic p.d.e. methods. The differential and integral operators satisfy the maximum principle in various forms, which enable pointwise estimates on the solution and its derivatives to be obtained. Variants of the Bellman Equation of dynamic programming were solved by approximating by a semilinear system of equations. Dissert. Abstr.

N82-11823 Pennsylvania State Univ., University Park.

NONCLASSICAL ORTHOGONAL POLYNOMIALS AND DIFFERENTIAL EQUATIONS Ph.D. Thesis

Lance Lee Littlejohn 1981 129 p
Avail: Univ. Microfilms Order No. 8120450

A class of orthogonal polynomials that are solutions to a sixth order formally self adjoint differential equation is discussed. These polynomials generalize the Legendre type polynomials. Many properties that these polynomials have in common with the classical orthogonal polynomials of Jacobi, Hermite, and Laguerre are also addressed. Dissert. Abstr.

N82-11824 California Univ., San Diego.

SPECIAL FUNCTIONS AND HARMONIC ANALYSIS ON P SUB N Ph.D. Thesis

Thomas Earl Bengtson 1981 109 p
Avail: Univ. Microfilms Order No. 8120518

The K-βessel function is defined as an integral over P sub n, the Riemannian symmetric space of positive definite symmetric n x n matrices over R. The K-Bessel function is defined as an integral over Euclidean space. A 'complete the square' argument is used to relate the K-Bessel and K-Bessel functions. This is then used to derive other properties of these functions. An exposition of special functions on P sub n is given, including explicit calculations using invariant differential operators on P sub n. Since P sub n can be identified with the space of positive definite quadratic forms, an explicit formulation of harmonic analysis on P sub n should prove useful to number theorists. By translating the work of Harish-Chandra and Helgason into this special case, an exposition of harmonic analysis in geodesic polar coordinates on P sub n is given. Dissert. Abstr.

N82-11825 Washington Univ., Seattle.

MULTILINEAR PSEUDODIFFERENTIAL OPERATORS AND PARAPRODUCTS Ph.D. Thesis

Julian Aguirre 1981 155 p
Avail: Univ. Microfilms Order No. 8122722

Certain multilinear operators which commute with simultaneous translations and their action on different classes of functions were studied. The goal is a understanding of multilinear operator and their use in nonlinear analysis. Series of multilinear operators are the correct substitute for power series when studying non-linear functions that appear naturally in mathematics. The introduction of multilinear operators permits the use of Fourier methods that at first sight might appear unsuitable for the treatment of such problems. Non-isotropic dilations and independent dilations in each variable are considered and ultimately all dilation structure is eliminated by considering spaces of homogeneous type. Dissert. Abstr.

N82-11826# National Aerospace Lab., Tokyo (Japan).

A SECOND-ORDER ACCURATE PROCEDURE FOR SOLVING THE BOUNDARY LAYER EQUATIONS BASED ON THE PREDICTOR-CORRECTOR FORM OF THE CRANK-NICOLSON SCHEME

Kenichi Matsuno 1981 10 p refs In JAPANESE; ENGLISH summary
(NAL-TR-655; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

The numerical accuracy of a predictor corrector form of the Crank-Nicolson scheme for solving boundary layer equations was investigated. A predictor corrector form of the Crank-Nicolson Scheme, based on a coupled algorithm for the continuity and the momentum equations, is presented for both the incompressible and the compressible flows. This scheme was subjected to a computer experiment by use of the problem of the laminar boundary layer development in a linearly retarded edge velocity field, and compared with another coupled scheme. It is shown that the present scheme posesses second-order accuracy and is very efficient. M.G.

A TWO-STEP APPROACH TO FINITE ELEMENT ORDERING

Steven J. Fenves and Kincho H. Law Aug. 1981 46 p refs
(Contract N00014-76-C-0354)
(AD-A104320; R-81-130) Avail: NTIS HC A03/MF A01 CSCL 12/1

A two-step approach to finite element ordering is introduced. The scheme involves ordering of the finite elements first, based on their adjacency, followed by a local numbering of the nodal variables. The ordering of the elements is performed by the Cuthill-Mckee algorithm. This approach takes into consideration the underlying structure of the finite element mesh, and may be regarded as a natural finite element ordering scheme. The experimental results show that this two-step scheme is more efficient than the reverse Cuthill-McKee algorithm applied directly to the nodes, in terms of both execution time and the number of fill-in entries, particularly when higher order finite elements are used. In addition to its efficiency, the two-step approach increases modularity and flexibility in finite element programs, and possesses potential application to a number of finite element solution methods. A GENERAL MOMENT INEQUALITY FOR THE MAXIMUM OF RECTANGULAR PARTIAL SUMS OF MULTIPLE SERIES

F. Moricz (Szeged Univ., Hungary) May 1981 10 p refs
(Contract N00014-79-C-0801)
(AD-A104475; TR-430; TR-81-3-ONR) Avail: NTIS HC A02/MF A01 CSCL 12/1

In a recent paper (7) we presented a general method of how to obtain an upper estimate for a fixed moment of the maximum of partial sums of a single series in terms of the given 'a priori' upper estimate for the same moment of the partial sums. Now we extend this method from single series to multiple series. GRA

BOUNDARY OBSERVABILITY AND CONTROLLABILITY FOR DIFFUSION EQUATIONS Final Report, 10 Dec. 1976 - 30 Jun. 1980

Thomas I. Seidman Sep. 1981 15 p refs
(Grant DAAG29-77-G-0061)
(AD-A104293; ARO-14092.20-M) Avail: NTIS HC A02/MF A01 CSCL 12/1

Investigation has focused on problems of observation and control for parabolic equations, primarily with interaction limited to the boundary of the region. Abstracts and bibliography presented herein may be classified under six headings: (a) Basic theoretical questions on control of parabolic equations; (b) Problems of observation and identification for parabolic equations; (c) Other system-theoretic problems; (d) Problems and considerations (algorithms, regularity, etc.) related to approximation and numerical computation; (e) 111-posed problems; and (f) Problems involving nonlinear partial differential equations. CONSTRAINED ADAPTIVE LEAST MEAN SQUARED FILTERS M.S. Thesis

Michael H. Davis Jun. 1981 130 p refs
(AD-A104625) Avail: NTIS HC A07/MF A01 CSCL 12/1

The possibility of designing constrained adaptive finite impulse response digital filters is investigated as motivated by a study of adaptive noise cancellation. The first constraint considered consists of a fixed angle between filter zeros and is implemented in a master-slave approach in which one of the zeros is adjusted adaptively and the others follow subject to the constraint. The second constraint considered is a linear constraint on the filter weights and is implemented by augmenting the error equation with Lagrangian multipliers. Simulations indicate that the approach is feasible. Author (GRA)

NUMERICAL DIFFERENTIATION OF NOISY DATA Final Report
C. Masaitis and G. Francis Aug. 1981 62 p refs
(DA Proj. 1L1-61102-AH-43)
(AD-A104631; ARBRL-MR-03126) Avail: NTIS HC A04/MF A01 CSCL 12/1

An algorithm has been developed based on the assumption that a given set of data is representable by a function that is a product of algebraic, trigonometric, and exponential polynomials. The degrees of the underlying polynomials, the optimal data spacing (optimal multiple of stepsize in tabular data), and the parameters of the approximating function are all selected by the algorithm to minimize an objective function that depends on the variance of the deviation between the data and the fitted function and on the degree of ill-conditioning of the problem. The algorithm permits choosing global or local fits. Derivatives of any order are obtained either by differentiating the fitted function or by a closed form relation between to model parameters and coefficients of linear combinations that express derivatives in terms of the observed values of the variable. Thus, the algorithm provides local differentiation formulas using parameters derived from global analysis of the data but in terms of the local values of the function. An appendix compares the accuracy of derivatives obtained for synthetic data with the accuracy of other methods.

ON PERMANENTS AND DIAGONAL PRODUCTS OF DOUBLY STOCHASTIC MATRICES Ph.D. Thesis
Ravindra Bhalchandra Bapat 1981 45 p
Avail: Univ. Microfilms Order No. 8120557

The duality theorem of linear programming is used to study the diagonal products of nonnegative matrices. It is shown that if the diagonal products of a nonnegative matrix are all bounded above by a known constant, then the entries of the matrix themselves must be bounded in a certain sense. As an application it is shown that if there are two distinct doubly stochastic matrices then there must be a diagonal product of the first which exceeds the corresponding product of the other. If A is an n x n nonnegative matrix with per A > 0, denote by f(A) the n x n matrix with f sub iJ (A) equal to a sub iJ/per A. A sub iJ is the submatrix of A obtained by deleting its i-TH row and J-TH column. A topiogical argument is used to show that f maps the set of doubly stochastic matrices as well as certain subpolytops of it onto themselves. Certain analogues of this are proved. It is shown that J sub N, the n x n matrix with all entries equal to 1/n, is the only positive fixed pont of f if n < or = 5. For n > 5 result remains unproved. A certain generalization of the above conjecture is proposed and proved for n < or = 5. It is shown that J sub N is an isolated fixed point of f.

APPLICATIONS OF NON-PARAMETRIC STATISTICS AND ANALYSIS OF VARIANCE ON SAMPLE VARIANCES
Raymond H. Myers Sep. 1981 98 p
(NASA Order L-72497-A)
(NASA-CR-165789) Avail: NTIS HC A05/MF A01 CSCL 12A

Nonparametric methods that are available for NASA-type applications are discussed. An attempt will be made here to survey what can be used, to attempt recommendations as to when each would be applicable, and to compare the methods, when possible, with the usual normal-theory procedures that are available for the Gaussian analog. It is important here to point out the hypotheses that are being tested, the assumptions that are being made, and limitations of the nonparametric procedures. The appropriateness of doing analysis of variance on sample variances are also discussed and studied. This procedure is followed in several NASA simulation projects. On the surface this would appear to be reasonably sound procedure. However, difficulties involved center around the normality problem and the basic homogeneous variance assumption that is mase in usual analysis of variance problems. These difficulties discussed and guidelines given for using the methods.

GENERALIZED L-, M- AND R-STATISTICS
Robert J. Serfling Aug. 1981 12 p refs
(Contract N00014-79-C-0801)
(AD-A104480; TR-349; TR-81-8-ONR) Avail: NTIS HC A02/MF A01 CSCL 12/1

A class of statistics generalizing U-statistics and L-statistics, and containing other varieties of statistics as well, such as trimmed U-statistics, is studied. Using the differentiable statistical function approach, differential approximations are obtained and the influence curves of these generalized L-statistics are derived. These results are employed to establish asymptotic normality for such statistics. Parallel generalizations of M- and R-statistics are noted. Strong convergence, Berry-Esseen rates, and computational aspects are discussed.

(RR0140241)
(AD-A104525; NRL-8517) Avail: NTIS HC A02/MF A01

CSCL 12/1

This report presents a statistical technique appropriate for the validation of a Monte Carlo simulation of a detection process whose results can be reduced to a finite time sequence of equally spaced events with dichotomous outcomes. The technique may be applied to other similar processes where there is not stationarity or steady state in the behavior of the process simulated. It is particularly useful in the case where multiple replications of the simulation have been obtained but only one observation of the real-world process is available. The Bahadur-Lazarsfeld representation of the probability distribution of the population consisting of all binary vectors having a given number of elements is generated from the sample of such vectors produced by several independent replications of the Monte Carlo simulation. Then the validity of the simulation is determined to within a specified significance level, by comparison with a single realization of the actual process simulated. This validation technique admits correlation between events occurring at different times.

A SIMULATION ANALYSIS OF THE EFFECTIVENESS OF MARKOVIAN CONTROL AND BAYESIAN CONTROL M.S. Thesis

Soo Sup Song Jun. 1981 81 p refs
(AD-A104635) Avail: NTIS HC A05/MF A01 CSCL 12/1

Statistical cost control decisions may be based on two competing decision models. The Markovian Control model controls a process by investigating the process whenever the reported cost exceeds a fixed critical limit. The Bayesian Control model controls a process by using the reported cost to update the probability of the process being in-control and investigate the process whenever such posterior probability is less than a fixed critical value. This paper compares the relative effectiveness of the two models by a simulation analysis. It is observed that the Markovian Control model performs as well as or better than the Bayesian Control model unless the cost distribution of the in-control state is more dispersed than that of the out-of-control state. It is also observed that the relative effectiveness of the Markovian Control model compared to the Bayesian Control increases as the savings from an investigation increases when the cost distribution of the in-control state is less dispersed than that of the out-of-control state. ESTIMATION PROBLEMS ASSOCIATED WITH THE WEIBULL DISTRIBUTION

K. O. Bowman and L. R. Shenton (Georgia Univ., Athens) Sep. 1981 125 p refs
(Contract W-7405-eng-26)
(DE81-030466; ORNL/CSD-79) Avail: NTIS HC A06/MF A01

Series in descending powers of the sample size are developed for the moments of the coefficient of variation v(*) for the Weibull distribution F(t) = 1 -exp(- (t/b) sup c). A similar series for the moments of the estimator c(*) of the shape parameter c are derived from these. Comparisons are made with basic asymptotic assessments for the means and variances. From the first four moments, approximations are given to the distribution of v(*) and c(*). In addition, an almost unbiased estimator of c is given when a sample is provided with the value of v(*). Comments are given on the validity of the asymptotically normal assessments of the distributions. DOE

PROJECTION PURSUIT METHODS FOR DATA ANALYSIS

Jerome H. Friedman and Werner Stuetzle Jun 1981 24 p refs
(Contract DE-AC03-76SF-00515)
(DE81-027493; SLAC-PUB-2768) Avail: NTIS HC A02/MF A01

The detection and description of multivariate structure using projection of the data is described. It is noted that projection of the data generally implies loss of information. As a consequence, multivariate structure does not usually show up in all projections, and no single projection might contain all the information. It is therefore important to judiciously choose the set of projections on which the model of the structure is to be based. DOE

PREDICTION, DIAGNOSIS, AND CAUSAL THINKING IN FORECASTING Interim Technical Report

Hillel J. Einhorn and Robin M. Hogarth 3 Sep. 1981 40 p refs Submitted for publication
(Contract N00014-18-K-0314; NR Proj. 197-071)
(AD-A104372) Avail: NTIS HC A03/MF A01 CSCL 05/10

While forecasting involves forward/predictive thinking, it depends crucially on prior diagnosis for suggesting a model of the phenomenon, for defining 'relevant' variables, and for evaluating forecast accuracy via the model. The nature of diagnostic thinking is examined with respect to these activities. We first consider the difficulties of evaluating forecast accuracy without a causal model of what generates outcomes. We then discuss the development of models by considering how attention is directed to variables via analogy and metaphor as well as by what is unusual or abnormal. The causal relevance of variables is then assessed by reference to probabilistic signs called 'cues to casuality'. These are: temporal order, constant conjunction, contiguity in time and space, number of alternative explanations, similarity, predictive validity, and robustness. The probabilistic nature of the cues is emphasized by discussing the concept of spurious correlation and how causation does not necessarily imply correlation. Implications for improving forecasting are considered with respect to the above issues. Author (GRA)

PROJECTED NEWTON METHODS AND OPTIMIZATION OF MULTICOMMODITY FLOWS

Dimitri P. Bertsekas and Eli M. Gafni Aug. 1981 30 p refs
(Contract N00014-75-C-1183; Grant NSF ECS-79-20834; NR Proj. 049-383)
(AD-A104419; LIDS-P-1140) Avail: NTIS HC A03/MF A01 CSCL 12/2

A superlinearly convergent Newton-like method for linearly constrained optimization problems is adapted for solution of multicommodity network flow problems of the type arising in communication and transportation networks. We show that the method can be implemented approximately by making use of conjugate gradient iterations without the need to compute explicitly the Hessian matrix. Preliminary computational results suggest that this type of method is capable of yielding highly accurate solutions of nonlinear multicommodity flow problems far more efficiently than any of the methods available at present. SENSITIVITY THEORY FOR NONLINEAR SYSTEMS. 2: EXTENSIONS TO ADDITIONAL CLASSES OF RESPONSES
Dan G. Cacuci Aug. 1981 37 p refs Sponsored in part by Electric Power Research Inst.
(Contract W-7405-eng-26)
(DE81-030258; ORNL/TM-7511; EPRI-RP-1441-1; EPRI-NP-81-10-LD) Avail: NTIS HC A03/MF A01

A functional analytic formulation of sensitivity theory is extended to include treatment of additional types of responses. There are physical systems where a critical point of a function that depends on the system's state vector and parameters defines the location in phase space where the response functional is evaluated. The Gateaux-differentials giving the sensitivities of both the functional and the critical point to changes in the system's parameters are obtained by alternative formalisms. The forward sensitivity formalism is the simpler and more general, but may be prohibitively expensive for problems with large data bases. The adjoint sensitivity formalism, although less generally applicable and requiring several adjoint calculations, is likely to be the only practical approach. Sensitivity theory is also extended to include treatment of general operators, acting on the system's state vector and parameters, as responses. DOE

Sastry A. Sivasankara 1981 105 p
Avail: Univ. Microfilms Order No. 8122603

The existence of the product of two LCTVS-Valued (countably additive) measures in various cases was proved. The product was expressed as an 'integral', as in the classical case of nonnegative measures. T.M.

N82-11848 Vanderbilt Univ., Nashville, Tenn.
HOMEOMORPHISMS OF SOME DIRECT LIMIT SPACES Ph.D. Thesis
Margaret Anne Hale 1981 111 p
Avail: Univ. Microfilms Order No. 8120200

The topology of some infinite dimensional direct limit spaces is investigated. The closed, locally compact subsets of a connected F-manifold are precisely the closed metrizable subsets. In addition, among the closed subsets of an F-manifold, first countability is equivalent to metrizability. Let H(M) denote the homeomorphism group of an F-manifold M. It is shown that in the limitation topology, the path components of H(M) are points. We prove here that in compact-open topology, H(M) is regular, Lindelof, paracompact, F-stable, and non-first countable. (These properties are shared by M.) We further show that, unlike M, H(M) with this topology is not a k-space. Homeomorphisms of a space onto itself are studied through group actions. Group actions are used to develop a factoring technique for homeomorphism groups. Dissert. Abstr.

N82-11849 Cornell Univ., Ithaca, N. Y.
RECURSIVE ASPECTS OF THE THEORY OF REAL CLOSED FIELDS Ph.D. Thesis
Stephen Brady 1981 50 p
Avail: Univ. Microfilms Order No. 8119493

The classical Artin-Schreier theory of real closed fields is reviewed for effective content. The main existence theorems of that theory are translated into effective forms and proven either true or false. The structure of real closed extensions of recursively ordered fields is then investigated, and theorems analogous to those of Melakides and Nerode for the algebraic case are proved. In addition, some of the limitations on the intrinsic relationships between recursively presented fields and their extensions or subfields are considered. The question of the conditions under which there must be a recursively presented real closed field lying between a recursively presented, formally real field and any presentation of its algebraic closure is addressed. This leads to a number of examples which illustrate the relationship between a formally real field's having a splitting algorithm and having certain spaces of orderings. Dissert. Abstr.

LINEAR EVOLUTION EQUATIONS OF HYPERBOLIC TYPE IN A LOCALLY CONVEX SPACE PH.D. Thesis
Young Han Choe 1981 92 p
Avail: Univ. Microfilms Order No. 8120562

The Cauchy problem for a linear evolution equation of hyperbolic type in a sequentially complete locally convex space X is studied. A set of sufficient conditions are sought for the operator-valued function and the vector-valued function so that the equation (L) has a unique solution and to construct the solution from given data. Various new concepts and methods are necessary for the theory of evolution equation in locally convex spaces. Calibrations, indexed calibrations and vector-valued integration are studied. Suitably chosen calibrations and indexed-calibrations replace the norms and then the corresponding expression by members of these calibrations or indexed-calibrations are obtained. The concept of Bocher-integrals is extended to the functions whose values lie in locally convex spaces. Dissert. Abstr.

FINITE ELEMENT ANALYSIS OF COUPLED MAGNETO-MECHANICAL PROBLEMS OF CONDUCTING PLATES Topical Report, Dec. - Apr. 1981
Kuan-Ya Yuan, Francis C. Moon, and John F. Abel 1 May 1981 17 p refs Presented at Intern. Conf. on Numerical Methods for Coupled Probl., Swansea, Wales, 7-11 Sep. 1981 Submitted for publication
(Contract N00014-79-C-0224)
(AD-A104406; Rept-81-10) Avail: NTIS HC A02/MF A01 CSCL 18/9

In design problems for fusion reactor structures and other magnetically loaded devices, the field and the magnetic forces are usually calculated for static conditions only. The structural analysis is then handled as a separate problem. Recently, more attention is being given to the transient field problems, but little work has been done in understanding the nature of the dynamic magnetic forces and the mutual interactions between the field and the structure. This paper presents a study of the magnetic forces, the mutual interaction between fields, and the induced vibrations of long conducting plates. The finite element method

is used for analysis. Some numerical results are presented.

(Contract DE-AC04-76DP-00789)
(DE81-024063; SAND-81-1194C; CONF-810684-36) Avail: NTIS HC A02/MF A01

Despite the fact that the theory of constitutive equations is developed with constitutive equations fabricated from many ad hoc assumptions some of which may be inconsistent or implicit, and are often very restricted in the types of motion to which they are applicable. Many of these constitutive equations in fact are special cases of general constitutive theories which have been studied in detail, and for which many general properties are known. The methodology of continuum constitutive theory is reviewed, with some examples drawn from viscous, viscoelastic, viscoplastic and mixture theories which have recently been applied to describing certain features of shock wave propagation. A NEW METHOD FOR MEASURING THE ACOUSTIC IMPEDANCE OF THE GROUND Ph.D. Thesis
Constantine Glaretas 1981 134 p
Avail: Univ. Microfilms Order No. 8120429

A method for measuring the acoustic impedance of the ground was developed. The free field two microphone method, as it is called consists of measuring the sound pressure field, radiating from a loudspeaker source and propagating parallel to the ground by two microphones located on the same vertical axis. The transfer function between these two microphone signals is shown to be, for total coherence, equal to the ratio of velocity potentials, predicted by the appropriate point to point propagation theory over a plane boundary. A numerical search with a digital computer provides the value of ground impedance which satisfies the transfer function relationship stated above. Three ground models were a locally reacting, an extended reacting, and a layered ground model. From the close agreement of local and extended reaction models in predicting ground impedance, it is concluded that the grass covered surfaces tested here can be considered as locally reacting, without significant error. Dissert. Abstr.

N82-11857 Pennsylvania State Univ., University Park.
AN EXPERIMENTAL INVESTIGATION OF OCEAN SEDIMENT EFFECTS UPON LONG RANGE TRANSMISSION LOSS IN SHALLOW WATER Ph.D. Thesis
John Harold Beebe 1981 191 p
Avail: Univ. Microfilms Order No. 8120400

Volume absorption was determined experimentally from mode attenuation coefficients measured using explosive sources at sites having varied sediment types. Absorption was predicted using the sediment models of Biot and Hamilton, and compared with the experimental absorption data. Comparisons between experimental and predicted absorption showed good agreement for three sites having medium to coarse sediments. The best agreement was obtained for a site having a mud bottom where the Biot model gave slightly better results than that of Hamilton over a frequency range of 25 to 250 Hz. Transmission loss was predicted for a site on the Scotian Shelf with a sloping bottom using values of sediment absorption predicted with the sediment models. Comparisons of transmission loss measured in one third octave bands over a frequency range of 25 to 800 Hz showed excellent agreement below 250 Hz with the loss predicted using an adiabatic normal mode propagation loss model whose sediment absorption inputs were obtained using the Biot model.

HANDBOOK FOR INDUSTRIAL NOISE CONTROL
1981 139 p refs
(Contract NAS1-15721)
(NASA-SP-5108) Avail: NTIS HC $7.50/MF A01 CSCL 20A

The basic principles of sound, measuring techniques, and instrumentation associated with general purpose noise control are discussed. Means for identifying and characterizing a noise problem so that subsequent work may provide the most efficient and cost effective solution are outlined. A methodology for choosing appropriate noise control materials and the proper implementation of control procedures is detailed. The most significant NASA sponsored contributions to the state of the art development of optimum noise control technologies are described including cases in which aeroacoustics and related research have shed some light on ways of reducing noise generation at its source. HELICOPTER ROTOR TRAILING EDGE NOISE Final Report
Robert H. Schlinker and Roy K. Amier Washington NASA Nov. 1981 150 p refs
(Contract NAS1-15730)
(NASA-CR-3470) Avail: NTIS HC A07/MF A01 CSCL 20A

A two dimensional section of a helicopter main rotor blade was tested in an acoustic wind tunnel at close to full-scale Reynolds numbers to obtain boundary layer data and acoustic data for use in developing an acoustic scaling law and testing a first principles trailing edge noise theory. Results were extended to the rotating frame coordinate system to develop a helicopter rotor trailing edge noise prediction. Comparisons of the calculated noise levels with helicopter flyover spectra demonstrate that trailing edge noise contributes significantly to the total helicopter noise spectrum at high frequencies. This noise mechanism is expected to control the minimum rotor noise. In the case of noise radiation from a local blade segment, the acoustic directivity pattern is predicted by the first principles trailing edge noise theory. Acoustic spectra are predicted by a scaling law which includes Mach number, boundary layer thickness and observer position. Spectrum shape and sound pressure level are also predicted by the first principles theory but the analysis does not predict the Strouhal value identifying the spectrum peak. A.R.H.

SEL AND EPNL NOISE DURATION COEFFICIENTS FOR THE 747 AND T-38 AIRCRAFT
William L. Willshire, Jr. Sep. 1981 12 p refs
(NASA-TM-83214) Avail: NTIS HC A02/MF A01 CSCL 20A

Duration coefficient were calculated for Boeing 747 and T-38 airplanes for sound exposure level (SEL) and effective perceived noise level (EPNL) scales. The measured SEL duration coefficients were 8.4 for the Boeing 747 and 5.5 for the T-38 result was in good agreement with a previous result for a similar F-5 airplane. In EPNL, the duration coefficients were 7.2 for the Boeing 747 and 5.7 for the T-38. The difference in the results between the two airplanes is believed to be due to their different engine noise source spectra. The difference in the Boeing 747 results in the two different metric was due to the different frequency weighting of A-weighted sound pressure level, used in SEL, and tone-corrected perceived noise level, used in EPNL, when applied to the 747 spectra. SYSTEM FOR CONTROLLED ACOUSTIC ROTATION OF OBJECTS Patent Application
Martin B. Barmatz, Inventor (to NASA) (JPL, California Inst. of Tech., Pasadena) Filed 18 Sep. 1981 15 p
(Contract NAS7-100)
(NASA-Case-NPO-15522-1; US-Patent-Appl-SN-303672) Avail: NTIS HC A02/MF A01 CSCL 20A

A system is described for use with acoustically levitated objects, which enables close control of rotation of the object. One system includes transducers that propagate acoustic waves along the three dimensions (X, Y, Z) of a chamber of rectangular cross section. Each transducer generates a first wave which is resonant to a corresponding chamber dimension to acoustically levitate an object, and additional higher frequency resonant wavelengths for controlling rotation of the object. The three chamber dimensions and the corresponding three levitation modes (resonant wavelengths) are all different, to avoid degeneracy, or interference, of waves with one another, that could have an effect on object rotation. Only the higher frequencies, with pairs of them having the same wavelength, are utilized to control rotation, so that rotation is controlled independently of levitation and about any arbitrarily chosen axis. NASA

DIGITAL ULTRASONICS SIGNAL PROCESSING: FLAW DATA POST PROCESSING USE AND DESCRIPTION Final Report
Victor E. Buel 30 Sep. 1981 141 p
(Contract NAS8-33100)
(NASA-CR-161882) Avail: NTIS HC A07/MF A01 CSCL 20A

A modular system composed of two sets of tasks which interprets the flaw data and allows compensation of the data due to transducer characteristics is described. The hardware configuration consists of two main units. A DEC LSI-11 processor running under the RT-11 sngle job, version 2C-02 operating system, controls the scanner hardware and the ultrasonic unit. A DEC PDP-11/45 processor also running under the RT-11, version 2C-02, operating system, stores, processes and displays the flaw data. The software developed the Ultrasonics Evaluation System, is divided into two categories: transducer characterization and flaw classification. Each category is divided further into two functional tasks: a data acquisition and a postprocessor ask. The flaw characterization collects data, compresses its, and writes it to a disk file. The data is then processed by the flaw classification postprocessing task. The use and operation of a flaw data postprocessor is described. S.L.

ACOUSTIC CAVITATION STUDIES Final Report
Lawrence A. Crum 1 Sep. 1981 23 p refs
(Contract N00014-79-C-0404)
(AD-A104409; Rept-811) Avail: NTIS HC A02/MF A01 CSCL 13/10

The primary thrust of this study was toward a more complete understanding of general aspects of acoustic cavitation. The effect of long-chain polymer additives on the cavitation threshold was investigated to determine if they reduced the acoustic cavitation threshold in a similar manner to the observed reduction in the cavitation index in hydrodynamic cavitation. Measurements were made of the acoustic cavitation threshold as a function of polymer concentration for additives such as guar gum and polyethelene oxide. The measurements were also made as a function of dissolved gas concentration, surface tension and viscosity. It was determined that there was a significant increase in the acoustic cavitation threshold for increased concentrations of the polymer additives (measurable effects could be obtained for concentrations as low as a few parts per million). One would normally expect that an additive that reduces surface tension to decrease the pressure required to cause a cavity to grow and thus these additives, at first thought, should reduce the threshold. However, even in the hydrodynamic case, the threshold was increased. In both of the hydrodynamic cases considered, the explanation for the increased threshold was given in terms of changed fluid dynamics rather than changed physical properties of the fluid. GRA

IONIZATION FLUCTUATIONS IN COLLISIONAL IONIZING SHOCK WAVES Ph.D. Thesis
Lin I 1981 141 p
Avail: Univ. Microfilms Order No. 8122082

Large amplitude density fluctuations were studied in the argon plasma behind collisional ionizing shock fronts. Chaotic post-shock density fluctuations were observed. They were two dimensional, almost frozen with the post-shock fow, and had particle-like dynamical behaviors. Amplitudes were greater at the shock front and slowly damped away to reach the post-shock equilibrium. Power spectra were composed of many discrete modes and followed S(K sub z) alpha with 1.2 < alpha < 2.2 for 71 > M > 15. The typical fluctuation scales were in the order of 1 cm. Rayleigh-Taylor instability and hydrodynamic rotational convective turbulence fail to explain the observed phenomena. An ionization reaction diffusion turbulene model is proposed, in which post-shock chaotic patterning can be induced by the ioniztion and diffusion effect and driven by the highly ordered pre-shock gas flow. The expectations from the use of this kind of open nonequilibrium system give good qualitative agreement with the experimental results. Dissert. Abstr.

NONLINEAR WAVES ON CHARGED PARTICLE BEAMS Ph.D. Thesis
Thomas Patrick Hughes 1981 141 p
Avail: Univ. Microfilms Order No. 8119459

A two dimensional particle simulation of the resistive filamentation instability on a charge and current neutralized particle beam was performed. The nonlinear development of the instability is analyzed with reference to the focusing requirements of heavy ion beams acting as drivers for pellet fusion. It is found that magnetically pinched current filaments form for all values of the dimensionless parameter. The combined area of the filaments decreases significantly as the filaments coalesce. This leads to a speculation that adequate focusing of the beam may be possible in spite of the development of this instability. Nonlinear space-charge waves in a strongly magnetized cylindrical plasma were also investigated. Soliton and periodic wave solutions were obtained. For the case of an intense unneutralized electron beam, a significant decrease in the phase velocity of the slow spce charge wave is found at large amplitudes. The importance of this result for some collective ion acceleration schemes is discussed. Dissert. Abstr.

THE HYDROGEN ATOM IN A STRONG UNIFORM MAGNETIC FIELD Ph.D. Thesis
Gary Leigh Webster 1981 122 p
Avail: Univ. Microfilms Order No. 8122605

The wave function for an electron in combined Coulomb and uniform magnetic fields is expanded in oblate speroidal angle functions. The resulting Schodinger equation for the racial functions is solved in two regions of energy and magnetic field strength. First, for large astrophysical field strengths, two adiabatic methods are employed which yield rigorous upper and lower bounds on the lowest exact energy levels for each symmetry of the system. Results are presented for energies of hydrogenic Is and 2p levels in magnetic fields in the range 10 to the 7th power < or = B < or = 10 to the 11th power Gauss. These results indicate that the present adiabatic methods employing spherical symmetry may be expected to give reliable results for energies of low lying hydrogenic levels for magnetic fields in the range 0 < or = B < or = 10 to the 9th power G. Second, these adiabatic methods are used. to obtain basis states for a calculation including nonadiabatic coupling. Properties of the oblate spheroidal eigenvalues and angle functions are presented, as are the properties of the matrix elements that couple the adiabatic channels. Dissert. Abstr.

MOLECULAR SPECTROSCOPY AND RELAXATION IN SUPERSONIC BEAMS Ph.D. Thesis
Katherine Lynn Saenger 1981 156 p
Avail: Univ. Microfilms Order No. 8120554

The results of laser induced fluorescence studies which explore various aspects of relaxation and spectroscopy in supersonic molecular beams are reported. The blue shifted absorption band in I2-solvent complexes formed in a supersonic expansion and the rotational and vibrational temperature of I2 as a function of pressure and diluent gas are examined. The utility of 12 fluorescence as a diagnostic to characterize the shape and cooling profile of the gas pulses is demonstrated for a pulsed nozzle. The electron spectrum of jet cooled biacetyl-d6 and the red bands in the electronic spectrum of biacetyl-h6 are also reported. Dissert. Abstr.

N82-11868 Cornell Univ., Ithaca, N. Y.
DIRECT OBSERVATION OF EXCITED OXYGEN ATOM PRODUCTION AND DEACTIVATION Ph.D. Thesis
Alan Peter Force 1981 160 p
Avail: Univ. Microfilms Order No. 8110418

The photodissociation of O3 in the gas phase at 248 nm was studied following photolysis with a KrF excimer laser. Oxygen atoms in the ground O(3Pj) state were detected through the use of time resolved atomic resonance absorption spectroscopy. The production of the ground state oxygen atoms in the photolysis process was monitored photoelectrically by their absorbance of the rsonance triplet at 130 nm, produced in a microwave powered atomic resonance lamp. Optically metastable O(1D2) atoms were monitored by following the increase in O(3Pj) concentration following deactivation of O(1D2) by O3. A comparison of the yield of O(3Pj) following O(1D2) deactivation by O3 and N2 shows that the rmoval of one excited oxygen atom is associated with the production of one ground state atom (1.05 + or - 0.05), suggesting the possible importance of physical quenching and concommitant energy transfer in the deactivation process. A quantitative estimate of the quantum yield of O(1D2) production at 248 nm of 0.85 + or - 0.02 can be made from the relative yields of O(1D2) and O(3Pj). Dissert. Abstr.

AN ELECTROSTATIC MODEL FOR ENERGIES OF MOLECULES IN SOLUTION Ph.D. Thesis
Clifford Eric Felder 1981 118 p
Avail: Univ. Microfilms Order No. 8122511

A model for solute solvent interactions is considered, in which the solute molecule is placed in a cavity surrounded by a dielectric. Each atom of the solute molecule is assigned a polarizability and a fixed partial chage, determined by semiempirical methods. These charges induce dipole moments at the atoms and polarize the dielectric. Each induced dipole is calculated by a rigorous treatment of its interactions with the charges and dipoles of the other atoms and with the dielectric. The electrostatic free energy for the molecule is determined as the reversible work to polarize the atoms and the surrounding dielectric and to assemble the charges and induced dipoles in their final positions within the cavity. In turn, molecular dipole moments and free energies of proton and electron transfer among related molecules may be calculated. Explicit formulas are derived for the case of a spherical cavity. Dissert. Abstr.

PARTICLE TRAJECTORIES IN A MODEL ELECTRIC FIELD 1
Yaakov Shima, Gabor Kalman, and Paul Carini 5 Jun. 1981 16 p
(Contract F19628-79-C-0031; AF Proj. 7661)
(AD-A104507; SCIENTIFIC-1; AFGL-TR-81-0167) Avail: NTIS HC A02/MF A01 CSCL 20/8

The work reported in this note was done for the purpose of determining the feasibility of neutralizing the potential difference that occurs on a spacecraft. It has been proposed that neutralization can be accomplished by emitting ions from the positively charged surface region of the spacecraft and by letting this current impact on the negatively charged surface region. In order to investigate the main features of the proposed scheme, we made some simplifying assumptions about the geometry of the problem. GRA

(Contract W-7405-eng-48)
(DE81-030663; LBL-13178) Avail: NTIS HC A03/MF A01

Construction of a direct sampling molecular beam apparatus for the measurement of concentration histories of short-lived species, in particular active radicals serving as chain carriers in the course of ignition in a hdrocarbon-air mixture, is described, including some prominent features of its design analysis. Whereas the system is not yet finished in all peripheral details, central elements have reached a sufficient degree of completion and level of function to warrant its documentation in the form of a preliminary report, incorporating the results of preliminary performance evaluation. The latter includes the measurement of the shutter function, showing the modulation of the beam monitored by a chopper to check its quality, and a time of arrival record from which it was established that the beam is fully supersonic at a Mach number of 2.34. DOE

USE OF MICROPROCESSORS IN A NEUTRINO EXPERIMENT

P. L. Connolly and D. Cutts (Brown Univ., Providence, R.I.) 1981 6 p Presented at the Conf. on the Appl. of Microprocessors to High Energy Phys. Expt., Geneva, 4-6 May 1981
(Contract DE-AC02-76CH-00016)
(DE81-026057; BNL-29675; CONF-810539-8) Avail: NTIS HC A02/MF A01

A fundamental part of the neutrino detector, four DEC LSI-11s are interfaced each to 1/4 of the detector apparatus via programmable scan controllers and to the central DEC 11-34 via separate DMA links. These microprocessors act in parallel to collect and reformat data from neutrino events; further, they can act independently, orchestrating an elaborate variety of calibrations asynchronously in different regions of the apparatus. It is much easier to manage a large detector in separate pieces. Each LSI-11 can run in stand-alone mode, allowing independent installation or checkout of different parts of the detector. When operational, the apparatus must be continuously calibrated; with a very large number of separate detector elements, distributed intelligence is most useful. DOE

STATISTICAL VERSUS VALENCE NEUTRON NEUTRON CAPTURE IN Mo-98

D. G. Gardner 19 Jun. 1981 5 p refs Presented at 4th Intern. Symp. on Neutron-Capture-Gamma-Ray Spectry. and Related Topics, Grenoble, 7-11 Sep. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-023943; UCRL-86267; CONF-810920-1) Avail: NTIS HC A02/MF A01

In mass regions corresponding to peaks in the neutron strength function, nonstatistical mechanisms contribute a significant or even major portion of the average radiation width in the beginning of the resonance region. This could severely limit the possibility of calculating capture cross sections for targets where experimental data are lacking, because such direct effects are sensitive to the detailed nuclear level structure in the daughter nucleus. The reaction Mo-98 +n was examined for neutrons in the 1 keV to 3 MeV energy range, because this case is often cited as one of the clearest examples of valence neutron capture effects. Preliminary calculations are presented which suggest that these nonstatistical effects rapidly disappear when measurements from even a small number of resonances are averaged. DOE

BOUNDED LIMIT FOR THE MONTE CARLO POINT-FLUX-ESTIMATOR
R. A. Grimesey 1981 6 p refs Presented at the Am. Nucl. Soc. Ann. Meeting, Miami Beach, Fla., 7 Jun. 1981
(Contract DE-AC07-76ID-01570)
(DE81-026526; CONF-810606-78) Avail: NTIS HC A02/MF A01

In a Monte Carlo random walk the kernel K(R,E) is used as an expected value estimator at every collision for the collided flux phi sub c r vector E) at the detector point. A limiting value for the kernel is derived from a diffusion approximation for the probability current at a radius R sub 1 from the detector point. The variance of the collided flux at the detector point is thus bounded using this asymptotic form for K(R,E). The bounded point flux estimator is derived. DOE

N82-11884# Los Alamos Scientific Lab., N. Mex.
ELECTRON - TEMPERATURE REQUIREMENTS FOR NEUTRALIZED INERTIAL-CONFINEMENT-FUSION LIGHT-ION BEAMS
D. S. Lemons 1981 12 p refs Presented at the 4th Intern. Topical Conf. on High-Power Electron and Ion-Beam Res. and Technol., Palaiseau, France, 29 Jun. - 3 Jul. 1981
(Contract W-7405-eng-36)
(DE81-025352; LA-UR-81-1873; CONF-810620-9) Avail: NTIS HC A02/MF A01

Because of their large self-space-charge fields, light ion beam drivers of energy and power sufficient to achieve inertial confinement fusion (ICF) cannot be focused on a small fuel pellet unless neutralized. Even if initially neutralized with comoving electrons, these beams will not stay neutralized and focus during propagation through a vacuum chamber unless the initial thermal-energy of the neutralizing electrons is sufficiently small. The effects which contribute to the effective initial temperature of the neutralizing electron are discussed including compressional shock heating. A simple heuristic model is used to construct envelope equations which govern axial as well as radial beam compression and use them to predict the largest initial electron temperature consistent with the required beam compression. This temperature for typical light ion beam systems is about ten eV - a temperature which may be possible to achieve. DOE

IMPROVED CALCULATIONS OF ENERGY DEPOSITION FROM FAST NEUTRONS
D. J. Brenner, R. E. Prael, J. F. Dicello, and M. Zaider 1981 11 p refs Presented at 4th Symp. on Neutron Dosimetry, Neuherberg/Munich, West Germany, 1 Jun. 1981
(Contract W-7405-eng-36)
(DE81-025385; LA-UR-81-1694; CONF-810673-2) Avail: NTIS HC A02/MF A01

A firmer basis for neutron cross-sectional calculations was established which results in improved calculations of dose and energy deposition in small sites from high energy neutrons. Secondary particle production spectra due to neutrons indicent on carbon and oxygen are calculated sing an intranuclear cascade code which takes into account specific nucler properties of carbon and oxygen (in particular, alpha-particle clustering). It also allows excited nuclei to de-excite by Fermi breakup rather than the more frequently used statistical evaporation mechanism, which is not applicable to low-mass nuclei. The code yields double-differential secondary particle spectra in energy angle which show good agreement with experimental data. DOE

ION-REVERSIBILITY STUDIES IN AMORPHOUS SOLIDS USING THE TWO-ATOM SCATTERING MODEL
O. S. Oen Jun. 1981 28 p refs Presented at the Seminar of Recent Theoret. Computational Develop. in Atomic Collisions in Solids, Strasbourg, 14 Jul. 1981
(Contract W-7405-eng-26)
(DE81-025188; CONF-810732-1) Avail: NTIS HC A03/MF A01

An analytical two-atom scattering model was developed to treat the recent discovery of the enhancement near 180 of Rutherford backscattering yields from disordered solids. The model includes the interaction of a second atom lying between the target surface and the backscattering plane. The projectile ion makes a glancing collision with this second atom both before and after it is backscattered. The model predicts an enhancement effect whose physical origin arises from the tolerance of path for those ions whose inward and outward trajectories lie in the vicinity of the critical impact parameter. Results using Moliere scattering show how the yield enhancement depends on ion energy, backscattering depth, exit angle, scattering potential, atomic numbers of the projectile and target, and target density. It is shown that these quantities depend on a single dimensionless parameter and analytical expressions for them are given which are accurate to better than 1%. DOE

HOLLOW CATHODE, MAGNETIC MULTIPOLE ION SOURCES FOR NEUTRAL BEAM INJECTION Ph.D. Thesis
Dan Michael Goebel 1981 144 p
Avail: Univ. Microfilms Order No. 8120955

A model of the plasma in the ion source is presented by examining the plasma loss mechanisms and calculating the plasma potential as a function of the plasma generator geometry and discharge parameters. The plasma potential is related to the ionization efficiency and stability of the source discharge against mode shifts. The analysis correctly predicts the neutral gas pressure and discharge voltage dependence observed in the plasma generators. A relationship is generated for the evaluation of source parameters such as maximum anode area which are required for discharge stability at given operation point. The model is extended to the quasi-uniform plasmas of the hollow cathode discharge and is utilized in discussing the potential distribution, stability and performance of that configuration. Dissert. Abstr.

ANALYSIS OF SPACE SYSTEMS STUDY FOR THE SPACE DISPOSAL OF NUCLEAR WASTE STUDY REPORT. VOLUME 2: TECHNICAL REPORT Final Report
1981 360 p refs
(Contract NAS8-33847)
(NASA-CR-161888; D180-26426-2-Vol-2; DPD-590; DR-4)
Avail: NTIS HC A16/MF A01 CSCL 18G

Reasonable space systems concepts were systematically identified and defined and a total system was evaluated for the space disposal of nuclear wastes. Areas studied include space destinations, space transportation options, launch site options payload protection approaches, and payload rescue techniques. Systems level cost and performance trades defined four alternative space systems which deliver payloads to the selected 0.85 AU heliocentric orbit destination at least as economically as the reference system without requiring removal of the protective radiation shield container. No concepts significantly less costly than the reference concept were identified. A.R.H.

COMPARISON OF COSTS FOR SOLIDIFICATION OF HIGH-LEVEL RADIOACTIVE WASTE SOLUTIONS: GLASS MONOLITHS VS. METAL MATRICES
L. J. Jardine, R. E. Carlton (TERA Corp.), and M. J. Steindler May 1981 155 p refs
(Contract W-31-109-eng-38)
(ANL-80-121) Avail: NTIS HC A08/MF A01

A comparative economic analysis was made of four solidification processes for liquid high-level radioactive waste. Two processes produced borosilicate glass monoliths and two others produced metal matrix composites of lead and borosilicate glass beads and lead and supercalcine pellets. Within the uncertainties of the cost (1979 dollars) estimates, the cost of the four processes was about the same, with the major cost component being the cost of the primary building structure. Equipment costs and operating and maintenance costs formed only a small portion of the building structure costs for all processes. DOE

INTERNATIONAL SAFEGUARDS FOR SPENT FUEL STORAGE Final Report
Myron Kratzer, Edward Wonder, William Immerman, and Frederick Crane Aug. 1981 73 p refs
(Contract W-7405-eng-26)
(DE81-029896; ORNL/SUB-7605-12-2) Avail: NTIS HC A04/MF A01

The nonproliferation effectiveness and political and economic acceptability of prospective improvements in international safeguard techniques for LWR spent fuel storage were analyzed. Although the applicability of item accounting considerably eases the safeguarding of stored spent fuel, the problem of verification is potentially serious. A number of simple gamma and neutron nondestructive assay techniques were found to offer considerable improvements, of a qualitative rather than quantiative nature, in verification-related data and information, and possess the major advantage of intruding very littel on facility operations. A number of improved seals and monitors appear feasible as well, but improvements in the timeliness of detection will not occur unless the frequency of inspection is increased or a remote monitoring capability is established. Limitations on IAEA Safeguards resources and on the integration of results from material accounting and containment and surveillance remain problems. DOE

UNCERTAINTY ANALYSIS FOR GEOLOGIC DISPOSAL OF RADIOACTIVE WASTE
Robert. N. Cranwell and Jon C. Helton (Arizona State Univ.) 1981 13 p refs Presented at Symp. on Uncertainties Assoc. with the Regulation of the Geol. Disposal of High-Level Radioactive Waste, Gatlinburg, Tenn., 9 Mar. 1981
(Contract DE-AC04-76DP-00789)
(DE81-027206; SAND-81-1718C; CONF-810372-3) Avail: NTIS HC A02/MF A01

The incorporation and representation of uncertainty in the analysis of the consequences and risk associated with the geologic disposal of high-level radioactive waste are discussed. Such uncertainty has three primary components: process modeling uncertainty, model input data uncertainty, and scenario uncertainty. The following topics are considered in connection with the preceding components: propagation of uncertainty in the modeling of a disposal site, sampling of input data for models, and uncertainty associated with model output. MATERIALS CONSIDERATIONS RELATIVE TO MULTIBARRIER WASTE ISOLATION
H. E. McCoy and J. C. Griess Jul. 1981 34 p refs
(DE81-029104; ORNL/TM-7770) Avail: NTIS HC A03/MF A01

The environmental conditions associated with the storage of radioactive wastes are reviewed, and the corrosion of potential waste containment materials under these conditions is evaluated. The desired service life of about 1000 years is beyond the time period for which existing corrosion data can be extrapolated with certainty; however, titanium aloys seem to offer the most promise. The mechanical requirements for canisters and overpacks are considered and several candidate materials are selected. Designs for a canister and an overpack have been developed, and these are used to estimate the costs or the three possible materials of construction. DOE

USE OF POLYETHERS IN THE TREATMENT OF ACIDIC HIGH-ACTIVITY NUCLEAR WASTES Final Report, 31 May 1976 - 31 Aug. 1980
M. W. Davis, Jr. 21 May 1981 62 p refs
(Contract DE-AS09-76ER-00884)
(DE81-027087; DOE/ER-00884/4) Avail: NTIS HC A04/MF A01

A solvent extraction system was developed which reversibly extracts C from 3M HNO3. The organic phase consists of a matrix solution of 27 vol % TBP, and 68 vol % kerosene. The complexing agents consist of (076M) 5 vol % di-dodecylnaphthalene sulfonic acid (DNS) and 02M Bis (4.4(5')

(1-hydroxyhepty) benzo) 18 crown 6. This is a synergistic system since both complexing agents are necessary to extract the cesium. The data indicate that one crown molecule is involved in the organic complex while the number of DNS molecules is at least one to satisfy the valence requirements but may be more since surfactants of the DNS type tend to form small aggregates in the organic phase. This lack of extraction is probably due to steric effects around the extracted metal atom when two or three ionized DNS molecules are required for valence adjustment. Radiation stability of the process is also discussed. DOE

N82-11896# Hanford Engineering Development Lab., Richland, Wash.
ZIRCALOY CLADDING: TOUGH CONTAINMENT FOR SPENT FUEL STORAGE
R. E. Einziger, D. M. Bosi, and A. K. Miller (Stanford Univ.) 1981 7 p ref Presented at the AM. Nucl. Soc. Ann. Meeting, Miami Beach, Fla., 7-12 Jun. 1981
(Contract DE-AC14-76FF-02170)
(DE81-024105; HEDL-SA-2325-FP; CONF-810606-57) Avail: NTIS HC A02/MF A01

The potential Zircaloy cladding degradation mechanisms are examined. It is concluded that in a limited air atmosphere, only stress rupture, stress corrosion cracking (SSC), and fatigue fracture could possibly compromise the cladding with stress-rupture of the pressurized fuel rods appearing to be the most likely mode of breach. Due to uncertainties in Blackburn's calculations, an experimental and theoretical study of stress rupture, stress corrosion cracking and the fatigue-fracture behavior of the cladding under postulated dynamic loads was conducted. Results presented may equally apply to dry storage. J.M.

MICROSTRUCTURES FOR HIGH-ENERGY X-RAY AND PARTICLE-IMAGING APPLICATIONS
N. M. Ceglio, G. F. Stone, and A. M. Hawryluk May 1981 18 p refs Presented at the 16th Symp. on Electron Ion and Photo Beam Technol., Dallas, 26 May 1981
(Contract W-7405-eng-48)
(DE81-026531; UCRL-85506; CONF-8105103-1) Avail: NTIS HC A02/MF A01

Coded imaging techniques using thick, micro-Fresnel zone plates as coded apertures were used to image X-ray emissions (2-20 keV) and 3.5 MeV Alpha particle emissions from laser driven micro-implosions. Image resolution in these experiments was 3-8 micrometers. Extension of this coded imaging capability to higher energy X-rays (approximately 100 keV) and more penetrating charged particles (e.g. approximately 15 MeV protons) requires the fabrication of very thick (50-200 mirometers), high aspect ratio (10:1), gold Fresnel zone plates with narrow linewidths (5-25 micrometers) for use as coded aperatures. A reactive ion etch technique in oxygen was used to produce thick zone plate patterns in polymer films. The polymer patterns serve as electroplating molds for the subsequent fabrication of the free-standing gold zone plate structures. DOE

STORAGE RING INJECTION
R. Burke 1980 11 p refs Presented at the Heavy Ion Fusion Workshop, Berkeley, Calif., 29 Oct. - 9 Nov. 1980
(Contract W-31-109-eng-38)
(DE81-023846; CONF-8010203-2) Avail: NTIS HC A02/MF A01

Basic issues involved in injecting the beam into storage rings were considered. The main conclusion is that straightforward adjustments of the storage ring parameters makes injection easy. The adjustments also result in lower bending magnet fields, and high field superconducting magnets (e.g., 5 Tesla) are not necessary. The design changes do not necessarily affect the Keil-Schnell criterion for stability of the longitudinal microwave instability. Because the beams are expected to be unstable, but with slow growth rates, the vacuum chamber impedances required to give equal risetimes for the various designs are compared for systems posing various degrees of difficulty for injection. DOE

HEAVY ION FUSION PROGRAM AT ARGONNE
R. L. Martin, R. Arnold, R. Burke, and J. Watson 1980 10 p refs Presented at the 7th All-Union Natl. Conf. on Particle Acceleration, Dubna, USSR, 14-16 Oct. 1980
(Contract W-31-109-eng-38)
(DE81-023905; CONF-8010206-1) Avail: NTIS HC A02/MF A01

The heavy ion preaccelerator and low beta linac are developed. The preaccelerator and the initial linac cavities are operational. The preaccelerator has achieved pulsed 50 mA Xe(+1) beams at 1.3 MeV. A 100 mA low emittance xenon (or mercury) source, a Penning discharge Pierce extraction source with a single 3 cm diameter aperture, was developed. Xenon currents of 100 mA were extracted with no indication of plasma sheath instability. The high voltage power supply is a dynamitron which was extensively modified for maximum pulsed current operation of 1.3 MV. The oscillator supports more than 40 mA of beam associated current with less than 0.25% voltage droop in 100 microns. DOE

HEAVY ION BEAM INTERACTION AND ENERGY PARTITION IN THE INITIAL STAGES OF ICF TARGET IRRADIATION
Paul Suh, Henry Makowitz, Mike Stauber, George H. Miley, and D. Harris Nov. 1980 30 p refs Presented at the Intern. Conf. on Plasma Sci., Santa Fe, N. Mex., 18 May 1981 Prepared

in cooperation with Grumman Aerospace Corp., Bethpage, N.Y. and Illinois Univ., Urbana
(Contract DE-AC02-76CH-00016)
(DE81-025296; BNL-29512; CONF-810527-6) Avail: NTIS HC A03/MF A01

An order of magnitude analysis of the effect of 20 GeV U-ion beam impact on an idealized inertial confinement fusion target. Be or Au ablator region was made, and the beam interaction and energy partition were studied for the initial stages of target irradiation. Uniform heating and an expansion perserving uniform density of the ablator medium was assumed for the initial stage of beam interaction. Significant differences in the partition of energy occur between Be and Au ablators. For Au, the main channels for the heavy-ion beam energy output are the escaping radiation energy (10 to 20% of the energy input, based on an extrapolation) and the thermal energy. For Be the ablator thermal energy and ionization channels dominate. DOE

KUGEL: A THERMAL, HYDRAULIC, FUEL PERFORMANCE AND GASEOUS FISSION PRODUCT RELEASE CODE FOR PEBBLE BED REACTOR CORE ANALYSIS
B. I. Shamasundar and M. E. Fehrenbach May 1981 273 p refs
(Contract DE-AT03-76ET-35300; GA Proj. 6400)
(DE81-026561; GA-A-16222) Avail: NTIS HC A12/MF A01

A computer code developed to analyze the thermal, hydraulic and fuel particle performance characteristics of axisymmetric pebble bed reactors is presented. This FORTRAN 5 program is overlayed into three main segments to minimize core storage. Variable dimensioning was introduced so that storage allocation is based on the user-specified problem size, thus allowing the code to handle any problem with uniform mesh interval. This provides the flexibility to choose thermal problem mesh sizes different from those used in the physics analyses. The code can also handle a non-uniform void fraction distribution. DOE

THEORY OF ELECTRON CYCLOTRON HEATING IN THE CONSTANCE 2 EXPERIMENT
M. E. Mauel Mar. 1981 30 p refs
(Contract DE-AC02-78EG-51013)
(DE81-028269; DOE/ET-51013/4; PFC/RR-81-2R) Avail: NTIS HC A03/MF A01

The bounce-averaged quasi-linear equation for a non-relativistic mirror-confined plasma interacting with electromagnetic waves is derived for use in the study of ECRH of the Constance II mirror experiment. The derivations follows the more formal examples given by Berk for electrostatic waves and Bernstein and Baxter for relativistic plasmas. The validity of the theory is discussed by examining individual particle orbits in an EM field. The local dispersion relation is found while deriving a self-consistent WKB theory which can be used to estimate the power transferred from the launching horn to the plasma. DOE

EVALUATION AND REVIEW OF ALTERNATIVE WASTE FORMS FOR IMMOBILIZATION OF HIGH-LEVEL RADIOACTIVE WASTES
1 Jul. 1981 42 p
(DE81-026323; DOE/TIC-11472; Rept-3) Avail: NTIS HC A03/MF A01

The relative strengths and weaknesses of the alternative forms are considered. Topics covered include uncoated waste forms, and the need for adopting additional standardized tests, standard reference materials, common units and standardized methods of data presentation. It was found that comparative data on leach rates in waters equilibrated with candidate rocks and potential geologic environments are almost nonexistent and are essential to establish relevant long term extrapolation of waste form performance. Understanding radiation damage effects on the microstructure and leaching mechanisms of polycrystalline ceramics is still insufficient to judge long term reliability of this class of waste forms. More extensive data on rates and mechanisms of leaching of all waste forms under radiation and repository conditions are needed. Additional studies of fundamental mechanisms controlling long term reliability of glass and alternative waste forms are strongly encouraged. DOE

INCLUSION OF A SIMPLE VEGETATION LAYER IN TERRAIN TEMPERATURE MODELS FOR THERMAL INFRARED (IR) SIGNATURE PREDICTION Final Report, 1 Oct. 1979 - 1 Oct. 1980
Lee K. Balick, Randy K. Scoggins, and Lewis E. Link, Jr. Aug. 1981 44 p refs
(DA Proj. 4A7-62730-AT-42; DA Proj. 4A7-62719-AT-40)
(AD-A104469; WES/MP/EL-81-4) Avail: NTIS HC A03/MF A01 CSCL 17/5

Thermal infrared signatures of natural and cultural features are dynamic, varying with time and weather conditions. Prediction of thermal signatures for specific conditions requires first that the actual temperature of the features be determined; for vegetation canopies this involves the average temperatures of canopy components and for planar (nonvegetated) surfaces the temperature of the surface. Models have been developed to handle layered vegetation canopies and layered ground surfaces; however, efforts have only begun to formulate a comparable capability for intermediate conditions such as grass covered surfaces where both the terrain surface and vegetation influence the average surface temperature. This report presents a procedure, named VEGIE, that predicts the temperature of terrain surfaces which contain a simple layer of vegetation. VEGIE is designed as an interim procedure for immediate application in lieu of more sophisticated and theoretical treatments of this problem. Operational flexibility and simplicity are preserved by using VEGIE as a submodel to the Terrain Surface Temperature Model (TSTM) developed previously at the U.S. Army Engineer Waterways Experiment Station. The TSTM predicts the surface temperature of nonvegetated layer and planar features using material thermophysical properties and meteorological conditions. These models are applied to a deciduous and a coniferous canopy where the CSU model is valid but VEGIE is not. VEGIE is applied to the problem of estimating thermal signatures for terrain surfaces with less than total foliage cover, the consequences of changes in foliage cover, differing emissivities for the soil and vegetation, and reflected sky radiation. LIGHT SCATTERING BY BUBBLES IN LIQUIDS OR IN GLASS Interim Technical Report, 1 Jul. 1980 - 31 Aug. 1981
Philip L. Marston, Dean S. Langley, and Dwight L. Kingsbury 1 Sep. 1981 92 p refs
(Contract N00014-80-C-0838)
(AD-A104241; ITR-1) Avail: NTIS HC A05/MF A01 CSCL 20/6

This technical report consists of publications, manuscripts, and supplemental information related to the scattering of light by bubbles in liquids and in glass. The emphasis of the report is on the scattering by air bubbles in water into the angular regions where diffraction makes essential corrections to elementary ray optics. For bubbles these regions are backward, forward and critical angle scattering. Most of the previous literature on light scattering is concerned with drop-like objects where the refractive index of the scatterer exceeds that of the surroundings. The present results should be useful for the optical characterization of microbubbles at sea and in water tunnels, or for the prediction of the optical properties of bubbly media. They should also be useful for laser-Doppler anemometry with microbubbles and the detection of microbubbles in glass. Certain phenomena described here should be present for other spherical or nearly spherical scatterers where the refractive index is less than that of the surroundings, for example: air bubbles in ice, water inclusions in fused quartz (such as those present in varieties of opal glass), ice spheres in water, and superheated drops in a host liquid. The coarse structure in the critical scattering region can be present even if the scatterer is not spherical. GRA

THE DECONVOLUTION OF AEROSOL BACKSCATTERED OPTICAL PULSES TO OBTAIN SYSTEM-INDEPENDENT AEROSOL SIGNATURES
Dennis McGuire and Michael Conner Jun. 1981 66 p refs
(AD-A104578; HDL-TR-1944) Avail: NTIS HC A04/MF A01 CSCL 20/6

Means are discussed for extracting system-independent aerosol signatures from aerosol backscatter measurements obtained with a specific pencil beam active optical detection system. Such signatures are required before the backscatter data can be applied to various proposed optical fuze designs for determining their aerosol vulnerability and to the investigation of aerosol discrimination schemes. The measurement system, which has been used in numerous experiments to probe such aerosols as weather clouds and military smokes, is a short pulse GaAs laser probe (pulse width + or - 10 nanoseconds whose range sensitivity extends from near the system to beyond 10 meters. A computationally fast numerical deconvolution algorithm is devised together with a comprehensive supporting analysis. Both indicate that severe signal-to-noise ratio constraints apply fo the achievement of meaningful superresolution. While the signal-to-noise ratios typical of recent measurements are likely to satisfy the severe constraints discovered, many of the earlier data are too noisy and thus require other signature determination methods. ANTIREFLECTING FILM DEVELOPMENT Final Report
Thomas S. Hahs 11 May 1981 13 p ref
(Contract W-7405-eng-48)
(DE81-030010; UCRL-15373) Avail: NTIS HC A02/MF A01

A metal-organic precursor was formulated that is converted by heating on surfaces of ordinary glass to a phase-separated metal-organic-derived glass coating, without exceeding 3750 C. This phase-separated layer is quickly and easily leached by nitric acid to leave a graded index, antireflective coating on ordinary glass that protects it against damage by high fluence of laser light at 1060 nm and shorter wavelengths. The metal-organic precursor is relatively inexpensive, and the thickness applied to the glass surface is not very critical for the achievement of protection for the glass surface from 1 ns pulses of laser energy. Laser damage testing at 248 nm with this coating on silica discs was thought to show separation of the coating from the substrate at fluences as low as 1.2 J/sq cm with fracture damage at 4.9 J/sq cm. REFLECTION/TRANSMISSION PHASE SHIFT INTERFEROMETER AND VIEWING OPTICS
J. A. Monjes, B. W. Weinstein, and D. L. Willenborg 15 Jun. 1981 25 p refs Presented at the Conf. on Lasers and Electro-Optics, Washington, D.C., 10-12 Jun. 1981
(Contract W-7405-eng-48)
(DE81-027658; UCRL-85281; CONF-810613-9) Avail: NTIS HC A02/MF A01

The interferometer and viewing optics that are the main optical components of an automated surface mapping system (ASM) used to characterize the surface topography and the wall thickness uniformity of opaque and transparent spherical shells is described. To characterize surface finish or wall thickness of spherical shells with an accuracy of 10 nm and a resolution of 1 micron the differential phase shift between two beams of orthogonal polarizations is measured, before and after the probe beam has interacted with the test object. DOE

HIGH-PRESSURE OPTICAL STUDIES
H. G. Drickamer 1981 11 p refs Presented at the Conf. on High Pressure Phys., Bad Honnef, West Germany, Aug. 1981
(Contract DE-AC02-76ER-01198)
(DE81-025577; DOE/ER-01198/1359; CONF-810828-1) Avail: NTIS HC A02/MF A01

In rare earth chelates the efficiency of 4f-4f emission of the rare earth is controlled by the feeding from the singlet and triplet levels of the organic ligand. These ligand levels can be strongly shifted by pressure. Photochromic crystals change color upon irradiation due to occupation of a metastable ground state. In thermochromic crystals, raising the temperature accomplishes the same results. For a group of molecular crystals (anils) at high pressure, the metastable state can be occupied at room temperature. The relative displacement of the energy levels at high pressure also inhibits the optical process. Effects on luminescence intensity are shown to be consistent. In the area of microscopic - molecular relationships, the effect of viscosity and dielectric properties on rates of nonradiative (thermal) and radiative emission, and on peak energy for luminescence is demonstrated. DOE

IMPROVEMENTS TO A HIGH-FREQUENCY FIBER-OPTIC SYSTEM FOR PLASMA DIAGNOSTICS
J. W. Ogle, P. B. Lyons, L. Looney, L. Hocker, M. A. Nelson, P. A. Zagarino, T. J. Davies, R. D. Simmons, R. Selk, and B. Hopkins 1981 7 p refs Presented at the SPIE Intern. Symp., San Diego, Calif., 24-28 Aug. 1981 Prepared in cooperation with Edgerton, Germeshausen and Grier, Inc, Santa Barbara, Calif., and Edgerton, Germeshausen and Grier, Inc., Las Vegas, Nev.
(Contract W-7405-eng-36)
(DE81-028741; LA-UR-81-2136; CONF-810810-18) Avail: NTIS HC A02/MF A01

Improvements in the system response, dynamic range, and calibration of the diagnostic system are described. Plastic-clad silica fiber is used as a radiation-to-light converter using the Cerenkov process. A spectral equalizer device is used to compensate for the material dispersion in the fiber, increasing the frequency response and the dynamic range. The calibration system uses a pulsed injection laser diode injected into the fiber at the radiation end of the fiber and detected by a microchannel plate photomultiplier tube on the recording end. The injection laser diode is triggered by a synchronous trigger delay unit, which also triggers a sampling or real time scope after as much as 10 microseconds delay with < 50 ps jitter. The system improvements are described in detail and the utility of these components in other plasma diagnostic systems is discussed. DOE

REFRACTED-RAY SCANNING (REFRACTED NEAR-FIELD SCANNING) FOR MEASURING INDEX PROFILES OF OPTICAL FIBERS
M. Young May 1981 61 p refs
(PB81-224610; NBS-TN-1038) Avail: NTIS HC A04/MF A01 CSCL 20F

An elementary description and tutorial overview of the refracted-ray method of measuring fiber-index profiles is given. Results concerning the theoretical foundation, the linearity and precision, resolution limit and edge response, and other aspects of the method are presented. In particular it was found that index differences may be measured to five percent or better and spatial resolution is diffraction limited. The author concludes by showing about 3 percent agreement with another laboratory, and good agreement with numerical aperture measurements performed by participants in a round-robin experiment. GRA

TEMPERATURE MEASUREMENT IN TURBULENT ARCS Ph.D. Thesis
Yun-ko Nickey Chien 1981 170 p
Avail: Univ. Microfilms Order No. 8122163

A technique using spectroscopic measurement to determine the temperature distribution in a turbulent arc was developed. The time-averaged radial distributions of temperature and the mean square fluctuations of temperature were obtained for a cascade D.C. argon arc in a 1 cm diameter channel having laminar flow (in approx. 0.1 g/s) at 100 A And 65 A, and for turbulent flow (in approx. 7.7 g/s) at 65 A. With laminar arcs fluctuations proceeded inward from the outer edge; in the present case temperature fluctuations were about 1 percent and 4 percent at the centerline and outer edge, respectively. Relatively large fluctuations in temperature, about 5 percent, were found across the entire column where the arc was turbulent. Centerline temperature were 11500 K and 10500 K for the laminar 100 A and 65 A arcs and 10650 K for the turbulent 65 A arc. The results obtained for the laminar arcs were in good agreement with published values; those for the turbulent arc were also in general agreement with more qualitative experiment results, and with theory. Dissert. Abstr.

THE EFFECTS OF TOROIDAL GEOMETRY AND SCATTERING BY DENSITY FLUCTUATIONS ON THE ACCESSIBILITY AND ENERGY DEPOSITION OF LOWER HYBRID WAVES Ph.D. Thesis
Paul Thaddeus Bonoli 1981 136 p
Avail: Univ. Microfilms Order No. 8119492

The effects of toroidicity and density fluctuations on the propagation of lower hybrid waves were studied. These effects result mainly from changes in k double bar as the wave propagates (k double bar is the wave number parallel to the applied magnetic field). With respect to toroidal effects, k double bar changes due to the nonconstancy of the poloidal mode number in toroidal geometry. Using ray tracing techniques, an assessment of this toroidal effect was made. It is found that waves, which on the basis of the cylindrical geometry theory would be inaccessible, may actually propagate to the plasma center and damp. The result is related to the onset of ray ergodicity. Further, it is shown that for accessible waves the optimal poloidal launch point is near the top or bottom of the torus. In order to include the effects of density fluctuations, an electromagnetic wave kinetic equation is derived, and solved by a Monte Carlo technique. It is found that scattering can further enhance accessibility. Dissert. Abstr.

FINITE TEMPERATURE RELATIVISTIC MAGNETOHYDRODYNAMIC WINDS Ph.D. Thesis
Fumichika Stanley Fujimura 1981 158 p
Avail: Univ. Microfilms Order No. 8120949

The cold relativistic magnetohydrodynamic (MHD) wind analysis of Michel is generalized to finite temperatures. In the monopole geometry, the MHD differential equations integrate to algebraic equations even for finite temperatures. Critical solutions are sought, i.e., wind solutions that start from a specified initial point, go through the intermediate (Affven) critical point, and through a fast MHD critical point. The analytical analysis is unable to find explicit solutions for the finite temperature relativistic MHD winds. However, the analysis is able to indicate certain conditions that must be satisfied for the critical solutions to exist as well as some approximate solutions to the wind. The problem is solved numerically and the results verify the analytical analysis. Furthermore, the numerical calculations reveal a uniform parametric characterization of the asymptotic wind solution in terms of the initial parameters. The finite temperature asymptotic wind solutions differ considerably from the cold wind minimum torque solutions of Michel. Dissert. Abstr.

THEORY OF DRIFT INSTABILITIES AND THE ASSOCIATED ANOMALOUS TRANSPORT
K. Nishikawa (Hiroshima Univ.), M. Wakatani (Kyoto Univ., Gokasho, Japan), T. Tuda (Japan Atomic Energy Research Inst., Tokai), T. Tange (Hiroshima Univ.), and T. Hatori Jul. 1981 134 p refs
(IPPJ-Rev-1) Avail: NTIS HC A07/MF A01

Drift waves, which are inherent in inhomogeneous magnetized plasmas, are considered the most promising candidate for explaining anomalous particle and electron heat transport in toroidal plasmas. The linear and nonlinear theories of drift instability are examined. Anomalous transport in Tokamaks is examined from a phenomenological viewpoint as well as in to relation to kinetic theory. Saturation levels and modes are discussed as well as the effect of magnetic shear and of the torus. A.R.H.

LEAST SQUARES AUTOREGRESSIVE (MAXIMUM ENTROPY) SPECTRAL ESTIMATION FOR FOURIER SPECTROSCOPY AND ITS APPLICATION TO THE ELECTRON CYCLOTRON EMISSION FROM PLASMA
N. Iwama, A. Inoue, T. Tsukishima, M. Sato, K. Kawahata, and K. Sakai (Osaka Univ.) Jul. 1981 47 p refs Presented at the 5th Intern. Conf. on Infrared and Millimeter Waves, Wuerzburg, West Germany, 6-10 Oct. 1980
(IPPJ-530) Avail: NTIS HC A03/MF A01

A procedure for the maximum entropy spectral estimation is studied for the purpose of data processing in Fourier transform spectroscopy. The autoregressive model fitting is examined under a least squares criterion based on the Yule-Walker equations. An AIC-like criterion is suggested for selecting the model order. The principal advantage of the new procedure lies in the enhanced frequency resolution particularly for small values of the maximum optical path-difference of the interferogram. The usefulness of the procedure is ascertained by some numerical simulations and further by experiments with respect to a highly coherent submillimeter wave and the electron cyclotron emission from a stellarator plasma. AN ENERGY INTEGRAL AND VARIATIONAL PRINCIPLE FOR PLASMA KINETIC MODES
Sanae-Inoue Itoh (Hiroshima Univ.), Kimitaka Itoh (Japan Atomi Energy Research Inst., Tokai), and Yoshinosuke Terashima Aug. 1981' 15 p refs
(IPPJ-531) Avail: NTIS HC A02/MF A01

An energy principle is extended to include kinetic processes, finite gyroradius effects and wave-particle interactions, in electromagnetic instabilities in a toroidal plasma. The present arguments are based on the energy integrals which are derived from the eigenmode equations for electromagnetic perturbations. Inclusion of the finite gyroradius effects in the energy integral shows that this integral can be used for eigenmode by minimizing the excess energy of the perturbed state. The extended stability conditions for kink-like mode and ballooning mode are obtained by use of this improved energy principle. For the case where wave-particle interaction is important, the energy integral becomes a rate equation of energy exchange, and a variational form can independently be constructed for the mode analysis. A.R.H.

BOOSTING UP OF NEUTRAL BEAM HEATING POWER BY SLOWLY RISING TOROIDAL FIELD
R. Y. Lin (Academia Sinica, Peking), K. Hirano, M. Okamoto, K. Shimizu, and T. Amano Aug. 1981 33 p refs
(IPPJ-534) Avail: NTIS HC A03/MF A01

A system of 1-D transport codes combined with Fokker-Planck codes was used to simulate plasmas undergoing compression with beam injection for the 'R-Project Tokamak'. The impurity radiation is not included. The numerical model contains the neoclassical transport including the Ware pinch, empirical anomalous particle and electron heat transports based on the Alcator scaling, and neutral particle transport. The combination results are very encouraging. They show that by sinusoidally increasing the toroidal magnetic field and the plasma current simultaneously, it is possible to significantly increase the temperature with a very slow compression. The final ion temperature is very weakly dependent on the compression time from 0.5 sec to 1 sec for the 'R-Project Tokamak'. If the 'R-Project Tokamak' plasma is compressed by sinusoidally increasing the magnetic field and plasma current simultaneously, then the beam power which is necessary to obtain an average ion temperature of keV without compression 15 MW can be decreased to 8.5 MW. ANALYTICAL STUDIES OF HIGH-PRESSURE MHD ACCELERATORS Final Report, 1 Oct. 1977 - 30 Sep. 1978
G. L. Whitehead AEDC Sep. 1981 81 p refs
(AD-A104686; AEDC-TR-81-18) Avail: NTIS HC A05/MF A01 CSCL 20/7

An analytical study was made of the feasibility of using an MHD-augmented arc as the primary component of a large reentry vehicle test facility. Computer studies of the performance of MHD accelerator channels were made for systems having channel input power of 50 MW to 1,700 MW. It was determined that complete simulation of reentry conditions is not possible in a single extended-flow facility. The studies showed, however, that very large increases in performance over existing arc facilities could be attained by use of MHD augmentation, provided, however, that several very difficult design problems could be solved. The most critical problem area was identified as that of maintaining the design integrity of the magnetic-field walls of the channel, which requires that a high level of electrical insulation be retained under a heating load of up to 10 sq cm. Only a marked increase in high-temperature materials technology would permit the use of uncooled refractories for these walls. The possibility of using film cooling for these walls was explored and it was found that, in addition to a substantial increase in complexity, such an approach would result in significant reductions in performance and efficiency of the MHD channel. SYMMETRIES OF THE NONLINEAR CONDUCTIVITY FOR A RELATIVISTIC TURBULENT PLASMA

Howard E. Brandt Mar. 1981 56 p refs
(DA Proj. 1L1-61101-A9-1A)
(AD-A104544; HDL-TR-1927) Avail: NTIS HC A04/MF A01 CSCL 20/9

The nonlinear conductivity tensor for a relativistic plasma has an important symmetry property which can be related to the nondissipative nature of the nonlinear current. This property is useful in establishing relationships in the theory of plasma turbulence. Following a review of the nonlinear conductivity, its definition is used explicitly to obtain the symmetry property. The latter is then related to the nondissipative property, and is shown to be reducible to the well-known nonrelativistic longitudinal case. Author (GRA)

ION THERMAL CONDUCTIVITY FOR A PURE TOKAMAK PLASMA Ph.D. Thesis

Curtis William Bolton, III Jun. 1981 117 p refs
(Contract DE-AC05-76ET-53036)
(DE81-029710; DOE/ET-53036/28) Avail: NTIS HC A06/MF A01

The ion thermal conductivity is calculated for a wide range of aspect ratios and collision frequencies. The calculation is done by solving the drift kinetic equation, with a model collision operator, using a finite element method, and then calculating the energy weighted friction force to determine the heat flux. The thermal conductivity, determined from the heat flux, is then curve fitted to analytic formulas. These formulas allow the conductivity to be calculated at all collision frequencies and aspect ratios down to about 3. DOE

ANTENNA-PLASMA COUPLING THEORY FOR ICRF HEATING OF LARGE TOKAMAKS

A. Bers, L. P. Harten, and A. Ram Feb. 1981 7 p refs
(Contract DE-AC02-78ET-51013)
(DE81-029815; DOE/ET-51013/9) Avail: NTIS HC A02/MF A01

The radiation impedance of, and field excitation by, current sheets external to a large (minor radius) plasma are calculated. The finite-size antenna current modeled by these current sheets is screened from the plasma by a sheath of anisoptropic conductivity which shorts out locally the toroidal radio frequency electric field but does not affect the poloidal radio frequency electric field. The plasma near the antenna is modeled by its cold dielectric tensor having an inhomogeneous density and applied magnetic field. The field analysis for the coupling and power flow is carried out in a slab geometry. DOE

MAGNETOHYDRODYNAMIC RESEARCH PROGRAM OF THE MHD ENERGY CENTER AT MISSISSIPPI STATE UNIVERSITY AND STRUCTURAL FEATURES OF MHD RADIANT BOILERS

W. S. Shepard 1981 53 p Lectures presented to MHD/HRSR Sci. and Engr. of the Peoples Republic of China, 10-31 Jul. 1981
(Contract DE-AC02-80ET-15601)
(DE81-029901; DOE/ET-15601/T3; TR-3) Avail: NTIS HC A04/MF A01

Magnetohydrodynamic is conducted largely through use of test stand which simulates conditions in the MHD gas stream. Continual modification of the test stand to reflect experimental results produced a test stand capable of test runs of 100 hours; runs of more than 500 hours are planned. The test stand is described, and experimental results are discussed. The design and construction of MHD radiant boiler are described. The radiant furnance serves several functions in a heat recovery and seed recovery system; it cools flue gases to a temperature suitable for entrance to the secondary superheater; it generates steam; it provides for the removal of molten ash at high temperatures; and it provides access for intrusive and nonintrusive instrumentation to the gas-side environment. DOE

PRODUCTION AND CHARACTERIZATION OF PURE CRYOGENIC INERTIAL FUSION TARGETS

B. A. Boyd (General Research Corp., Fort Walton Beach, Fla.) and Gary W. Kamerman 1981 6 p refs Presented at the IECEC Conf., Atlanta, 9 Aug. 1981
(Contract DE-AC08-79DP-40093)
(DE81-025920; DOE/DP-40093/9; CONF-810812-30) Avail: NTIS HC A02/MF A01

An experimental cryogenic inertial fusion target generator and two optical techniques for automated target inspection are described. The generator produces 100 microns diameter solid hydrogen spheres at a rate compatible with fueling requirements of conceptual inertial fusion power plants. A jet of liquified hydrogen is disrupted into droplets by an ultrasonically excited nozzle. The droplets solidify into microspheres while falling through a chamber maintained below the hydrogen triple point pressure. Stable operation of the generator has been demonstrated for up to three hours. The optical inspection techniques are computer aided photomicrography and coarse diffraction pattern analysis (CDPA). The photomicrography system uses a conventional microscope coupled to a computer by a solid state camera and digital image memory. The computer enhances the stored image and performs feature extraction to determine pellet parameters. The CDPA technique uses Fourier transform optics and a special detector array to perform optical processing of a target image. DOE

STIMULATED RAMAN SCATTERING IN LARGE PLASMAS

Donald W. Phillion and David L. Banner 6 Nov. 1980 45 p refs Presented at 22nd Ann. Meeting of the Div. of Plasma Phys. of the Am. Phys. Soc., San Diego, Calif., 10-14 Nov. 1980 Submitted for publication
(Contract W-7405-eng-48)
(DE81-026589; UCRL-84854; CONF-801119-7) Avail: NTIS HC A03/MF A01

Stimulated Raman scattering is of concern to laser fusion since it can create a hot electron environment which can increase the difficulty of achieving high final fuel densities. In earlier experiments with one micron laser light, the energy measured in Raman-scattered light has been insignificant. But these experiments were done with, at most, about 100 joules of laser energy. The Raman instability has a high threshold which also requires a large plasma to be irradiated with a larger diameter spot. Only with a long interaction length can the Raman-scattered light wave convectively grow to a large amplitude, and only in recent long pulse, high energy experiments (4000 joules in 2 ns) at the Shiva laser facility have we observed as much as several percent of the laser light to be Raman-scattered. We find that the Raman instability has a much lower intensity threshold for longer laser pulselength and larger laser spot size on a solid target. DOE

SOURCE-TO-INCIDENT-FLUX RELATION IN A TOKAMAK BLANKET MODULE

G. R. Imel 1981 4 p refs Presented at the Am. Nucl. Soc. Ann. Meeting, Miami Beach, Fla., 7-12 Jun. 1981
(Contract DE-AC07-76ID-01570)
(DE81-026524; CONF-810606-82) Avail: NTIS HC A02/MF A01

The next-generation Tokamak experiments, including the Tokamak fusion test reactor (TFTR), will utilize small blanket modules to measure performance parameters such as tritium breeding profiles, power deposition profiles, and neutron flux profiles. Specifically, a neutron calorimeter (simply a neutron moderating blanket module) which permits inferring the incident 14 MeV flux based on measured temperature profiles was proposed for TFTR. The problem of how to relate this total scalar flux to the fusion neutron source is addressed. This relation is necessary since the calorimeter is proposed as a total fusion energy monitor. The methods and assumptions presented was valid for the TFTR Lithium Breeding Module (LBM), as well as other modules on larger Tokamak reactors. DOE

PRELIMINARY ACTIVATION CALCULATIONS FOR THE POLOIDAL DIVERTOR EXPERIMENT

J. L. Judd, A. J. Scott, D. W. Higg, and T. S. Bohn 1981 6 p refs Presented at the Am. Nucl. Soc. Ann. Meeting, Miami Beach, Fla., 7-12 Jun. 1981
(Contract DE-AC07-76ID-01570)
(DE81-026525; CONF-810606-80) Avail: NTIS HC A02/MF A01

The poloidal divertor experiment (PDX) Tokamak is being operated to study plasma cross section shaping, high power neutral beam heating, and divertor control of plasma impurities in Tokamaks. Experiments to date were performed at relatively low power, but with 6 MW of neutral beam power eventually available, high D-D plasma reaction rates are expected that will yield up to 10 to the 15th power 2.45-MeV neutrons per pulse. This neutron emission level is high enough to cause significant neutron-induced machine activation that must limit the occupancy time of personnel entering the room to repair or change parts. The dose rate depends on the location in the room and, of course, the pulsing history prior to entry. One dimensional activation calculations are described that were done for PDX to provide preliminary dose rate information for various times after shutdown following one week of high power operation. UNCERTAINTIES ASSOCIATED WITH INERTIAL-FUSION IGNITION

Gene H. McCall 1981 10 p refs Presented at the Conf. on Optics, Santa Fe, N. Mex., Apr. 1981
(Contract W-7405-eng-36)
(DE81-025408; LA-UR-81-1750; CONF-81-429-34) Avail: NTIS HC A02/MF A01

An estimate is made of a worst case driving energy which is derived from analytic and computer calculations. The uncertainty can be reduced by a factor of 10 to 100 if certain physical effects are understood. That is not to say that the energy requirement can necessarily be reduced below that of the worst case, but it is possible to reduce the uncertainty associated with ignition energy. With laser costs in the $0.5 to 1 billion per MJ range, it can be seen that such an exercise is worthwhile. DOE

HEATING OF A DENSE PLASMA WITH AN INTENSE RELATIVISTIC ELECTRON BEAM: INITIAL OBSERVATIONS

M. D. Montgomery, J. V. Parker, K. B. Riepe, and R. L. Sheffield 1981 9 p refs Presented at the 4th Intern. Topical Conf. on High-Power Electron and Ion-Beam Res. and Technol., Palaiseau, France, 29 Jun. - 3 Jul. 1981
(Contract W-7405-eng-36)
(DE81-025348; LA-UR-81-1860; CONF-810620-8) Avail: NTIS HC A02/MF A01

A dense (approximately 0 to the 17th power/cu cm) plasma

was heated via the relativistic two-stream instability using a 3 MeV, intense (5 x 10 to the 5th power A/sq cm) electron beam. Evidence for heating was obtained with diamagnetic loops, thin-foil witness plates, and a 2-channel, broad-band soft X-ray detector. Measurements of energy loss from the beam using calorimetry techniques were attempted. The measured strong dependence of heating on beam transverse temperature and the very short interaction length (< 4 cm) are consistent with beam-plasma coupling due to the relativistic electron-electron two-stream instability. Soft X-ray measurements made > 100 ns after the beam pulse are consistent with a plasma temperature < 150 eV and line emission near 80 to 90 eV.

MAXIMAL ENTROPY IN FLUID AND PLASMA TURBULENCE: A REVIEW
David Montgomery 1981 21 p refs Presented at the Workshop on Maximum Entropy Estimation and Data Analysis, Laramie, Wyo., 8 Jun. 1981
(Contract W-7405-eng-36)
(DE81-025388; LA-UR-81-1697; CONF-8106116-1) Avail: NTIS HC A02/MF A01

Three applications of maximal entropy procedures to models of turbulence in plasmas are described. They are: (1) the calculation of most probable states in guiding-center plasmas and vortex fluids; (2) the calculation of most probable magnetohydrodynamic equilibrium profiles; and (3) the prediction of absolute equilibrium Gibbs ensemble spectra for Navier-Stokes fluids. Further conjectures on the role of entropies in turbulence theories are offered.

DEVELOPMENT, TESTING, AND EVALUATION OF MHD MATERIALS AND COMPONENT DESIGNS. VOLUME 1: EXECUTIVE SUMMARY Final Report, 15 Oct. 1973 - 31 Dec. 1975
W. E. Young Nov. 1980 44 p refs
(Contract DE-AC01-76ET-10805)
(DE81-026203; DOE/ET-10805/T1-Vol-1; FE-1540-29-Vol-1) Avail: NTIS HC A03/MF A01

Results of studies on gas electrical properties, coal combustion, and MHD materials intended to support the Waltz Mill channel experiments are presented. Materials testing indicated that stabilized zirconia should be an acceptable electrode material. Cyclone coal combustors were studied and designs developed for a Waltz Mill size unit and a 25,000 lb/h prototype. The Waltz Mill facility performed in a highly satisfactory manner. Six non generating and 16 load tests were made on three channels. Following a failure of the air heater tests were run essentially on materials and structure. The system was dismantled and reconstruction started to enable testing at the proposed Component Development Integrated Facility. A very successful 127-hour run was made on a pair of US designed and constructed MHD electrode modules in the Soviet Union's U-02 facility.

Houlberg, H. C. Howe et al 1981 13 p refs Presented at the Symp. of Phys. Probl. of Fusion Reactors, Trieste, Italy, 2 Jun. 1981
(Contract W-7405-eng-26)
(DE81-024254; CONF-810680-2) Avail: NTIS HC A02/MF A01

An initial range of plasma assumptions and scenarios for the US Tokamak FED concept is examined. The results suggest that the current FED baseline parameters are appropriate for achieving its nominal goals of P(fusion) approx. = 180 MW and a plasma Q > or = to 5 for a pulse length greater than 100 s. However, large uncertainty still exists in the areas of current startup, ion-cyclotron wave launching, influence of plasma shape on achievable beta, impurity control, plasma edge transport, and plasma disruption. Various options and remedies to alleviate the impact of the uncertainty on the FED design concept are suggested.

PHYSICS CONSIDERATIONS FOR THE FED LIMITER
H. C. Howe Jul. 1981 36 p refs
(Contract W-7405-eng-26)
(DE81-027596; ORNL/TM-7803) Avail: NTIS HC A03/MF A01

The scrapeoff plasma and its interaction with a pumping limiter is reviewed. The governing equations for heat and particle transport in the scrapeoff are solved analytically with several simplifying assumptions. The assumed scrapeoff model is presented. A shape for the limiter, which has a uniform heat loading on the front surface is derived. The assumed crossfield transport coefficient is varied to examine the sensitivity of the heat loading to variations in plasma scrapeoff thickness. The heat flux to the limiter leading edge is an extremely sensitive function of variations in scrapeoff thickness. Uncertainties in the plasma crossfield transport preclude derivation of a believable limiter shape. Problems involved with an edgeless, perforated limiter and with a global limiter are discussed. A flat-plate limiter with the heat flux to the leading edge controlled by major radius motion of the plasma is proposed.

COATED-LIMITER TESTING IN TOKAMAKS
J. B. Whitley, A. W. Mullendore, D. M. Mattox, P. W. Trester (General Atomic Co.), and L. C. Emerson (Oak Ridge National Lab.) 1981 7 p refs Presented at the Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract DE-AC04-76DP-00789)
(DE81-027665; SAND-81-0270C; CONF-810831-5) Avail: NTIS HC A02/MF A01

Over the past year, extensive operating experience was gained with coated graphite limiters in the ISX-B and Doubler III Tokamaks. A total of approximately 20,000 Tokamak discharge were performed with TIC coated limiters, and the plasma performance and capability with these limiters improved over that obtained with metallic limiters. While none of the limiters failed in service, the TIC coating and in some cases the graphite substrate experienced damage. This damage consists of grooves formed in the coating and an area of coating melt and graphite cracking. The groove damage is believed to have been caused by disruptions and the melt region by the high heat loads during neutral beam heated discharges.

SHOCK EFFECTS IN PARTICLE-BEAM FUSION TARGETS
M. A. Sweeney, F. C. Perry, J. R. Asay, and M. M. Widner 1981 5 p refs Presented at the APS Conf. on Shock Waves in Condensed Matter, Menlo Park, Calif., 23 Jun. 1981
(Contract DE-AC04-76DP-00789)

(DE81-027806; SAND-80-2870C; CONF-810684-41) Avail: NTIS HC A02/MF A01

The response of fusion target materials to shock loading is assessed. The particle beam accelerators HYDRA and PROTO I and the gas gun facility were utilized. Nonlinear shock-accelerated unstable growth of fabrication irregularities were demonstrated, and jetting was found to occur in imploding targets because of asymmetric beam deposition. Cylindrical ion targets display an instability due either to beam or target nonuniformity. However, the data suggest targets with aspect ratios of 30 may implode stably. The first time- and space-resolved measurments of shock-induced vaporization were made. A homogeneous mixed phase EOS model cannot adequately explain the results because of the kinetic effects of vapor formation and expansion. DOE

MAGNETS FOR THE TANDEM MIRROR FUSION POWER REACTOR WITAMIR-I
W. Maurer, (Kernforschungszentrum, Karlsruhe), D. C. Larbalestier, and I. N. Sviatoslavsky Mar. 1981 7 p refs Presented at the 7th Intern. Conf. on Magnet Technol., Karlsruhe, West Germany, 30 Mar. - 3 Apr. 1981 Submitted for publication
(Contract DE-AS02-78ET-52048)
(DE81-025568; UWFDM-408; CONF-810340-14; DOE/ET-52048/17) Avail: NTIS HC A02/MF A01

The design of the magnet system for the Tandem Mirror Fusion Power Reactor WITAMIR-I is presented. The central cell of this reactor consists of 34 dc solenoid magnets with a diameter of about 8 m, spaced over a length of 165 m; the central cell magnetic field is 3.6 T. The design of these magnets is relatively simple. The requirements of the end plug magnets are more stringent. In our concept each end plug consists of one barrier mirror solenoid coil, of 3.4 m inner diameter, producing an on axis field of 14 T, two transition coils and a yin-yang pair with a maximum plug field of 6 T and a plug mirror ratio of 1.5. NbTi can be used for all coils except the high field plug solenoid for which Nb3Sn is needed. DOE

VIBRATIONAL SPECTRA AND ATOM-ATOM POTENTIALS IN THE CRYSTALLINE STATE. 1: A COMPARISON OF HEXASULFUR, OCTASULFUR AND DODECASULFUR. 2: A STUDY OF SOLID ALLENE Ph.D. Thesis
Frederick Joseph Silbereis 1981 229 p
Avail: Univ. Microfilms Order No. 8121244

The potentials between atoms of different molecules in a crystal are studied. They are taken to be of the 8 exp form, with a coulombic term added in some cases. An atom-atom potential developed for octasulfur is used to predict the molecular vibrations of hexasulfur, octasulfur, and dodecasulfur in the crystalline state. The fit for hexasulfur is unsatisfactory so that a different potential (but of the same form) is proposed which fits much better, however, neither potential is clearly favored in its application to dodecasulfur. In all calculations, both internal vibrations and lattice vibrations are included and can interact. This interaction, or mixing, is seen to be negligible for hexasulfur and minor for octasulfur, but quite significantly for dodecasulfur. The complete infrared and Raman spectra (down to about 30 wave numbers) of solid allene at 77 K are presented. Dissert. Abstr.

GROWTH OF SOLID SOLUTION SINGLE CRYSTALS Final Report
August F. Witt Oct. 1981 12 p refs
(Contract NAS8-32994)
(NASA-CR-161891) Avail: NTIS HC A02/MF A01 CSCL 20B

The bulk growth of HgCdTe crystals by modified Bridgman techniques and by quenching anneal recrystallization yields deficient material. The primary complication for growth arises from a pronounced tendency for constitutional supercooling caused by the characteristics of the phase diagram and from the high vapor pressure of Hg. Unseeded and seeded Bridgman growth are considered from the viewpoints of: (1) backmelting of a solid charge; (2) equilibration prior to regrowth; and (3) the growth process. A growth system developed to restrict the thermal gradient region in the melt is described which is based on differentially operated heat pipes (isothermal regions) separated by an (adiabatic) gradient region, this permits maximized radial thermal gradient control, which is desirable for the establishment of a planar solidification isotherm A.R.H.

DISLOCATION INDUCED NOISES IN SEMICONDUCTORS AT LOW AND HIGH TEMPERATURES Annual Technical Report, 1 Apr. 1980 - 1 Apr. 1981
Samson Milshtein May 1981 21 p refs
(Contract DAJA37-80-C-0067)
(AD-A104449; ATR-1) Avail: NTIS HC A02/MF A01 CSCL 20/12

This investigation was concentrated on better understanding of the dislocation structure involved in noise generation process. It is shown that noise power depends on unhomogeneities of dislocation structure especially on randomly distributed dislocation electrical barriers. The annealing of dislocation-point defect complexes does not influence the noise spectrum. It is difficult to find a proper explanation for this surprising result. GRA

The electro-optic effect is investigated both theoretically and experimentally. The theoretical approach is based upon W.A. Harrison's 'Bond-Orbital Model'. The separate electronic and lattice contributions to the second-order, electro-optic susceptibility are examined within the context of this model and formulae which can accommodate any crystal structure are presented. In addition, a method for estimating the lattice response to a low frequency (dc) electric field is outlined. Finally, experimental measurements of the electro-optic effects in TeO2 and Tl3AsSe3 have been performed and the results of these measurements are presented. Author (GRA)

EVALUATION OF ALPHA ALUMINUM PHOSPHATE FOR ADVANCED ACOUSTIC WAVE DEVICES
John Gualtieri and Arthur Ballato Aug. 1981 51 p refs
(DA Proj. 1L1-62705-AH-94)
(AD-A104685; DELET-TR-81-15) Avail: NTIS HC A04/MF A01 CSCL 20/3

Alpha aluminum phosphate (berlinite) has been investigated as a highly piezoelectric material potentially suitable for use in advanced bulk and surface acoustic wave devices. Areas of investigation include: (1) crystal structure, (2) methods of crystal growth, (3) defects in structure, (4) the presence of water impurities, (5) piezoelectric resonators, and (6) the equivalent electrical circuit. Calculations have been carried out for frequency constant, piezoelectric coupling factor, and linear temperature coefficient as functions of orientation for general, doubly rotated plate orientations, and disclose quartz-like properties with coupling factors appreciably larger than quartz. Measurements indicate larger than expected losses, indicative of incorporation of impurities during growth; suggestions for further work are given. Author (GRA)

In this report we have discussed the characterization of the power FETs procured for this program and failure analysis of low noise devices, including wire bonding failures and environmental stress test failures. A method of etching gold while leaving the underlying refractory metals relatively unaffected was explained. An analysis of the Type A-6 low noise FET was given, in which a failure mode was discussed that involved possible channel doping compensation. Results were then presented on device failures from high and medium temperature stress tests on low noise FETs. A number of medium power devices were received from RADC for analysis. These were packaged FETs that had been subjected to various stresses at Texas Instruments on a RADC/TI reliability contract. Typically, the devices had failed during deliberate stressing to the maximum electrical limits or in temperature stress tests. Failure mechanism studies of two different ohmic contact metallizations showed that both fabrication procedures produced reliable contacts. Constant elevated temperature tests of gold-based gate diode FETs from two different manufacturers showed that one device type was considerably less prone to gate diode failure than the other, indicating the necessity of additional work on the gold gate versus aluminum gate reliability question. Failures were investigated that involve problems associated with gold contact pads overlaying aluminum gate pads with a refractory metal interface. Finally, temperature-accelerated studies of the resistance of aluminum gates were carried out. Author (GRA)

A STUDY OF METAL-SEMICONDUCTOR CONTACTS ON INDIUM PHOSPHIDE Final Technical Report, 1 Oct. 1979 - 30 Sep. 1980
G. Y. Robinson Jul. 1981 46 p refs
(Contract F19628-79-C-0016; AF Proj. 2306)
(AD-A104439; RADC-TR-81-169) Avail: NTIS HC A03/MF A01 CSCL 20/12

This report describes the research accomplished during the last twelve months of a 20-month program of research on metal contacts to the semiconductor indium phosphide (InP). The Schottky barrier energy phi sub B and the contact resistance r(c) were measured for several metal-InP structures and the electrical properties were correlated to the metallurgical properties obtained with Auger electron spectroscopy (AES). Separate measurement of phi sub B on both n-type and p-type InP was carried out using Al as the metal Electrode. Control samples of Al/GaAs and Al/Si diodes were fabricated simultaneously in order to evaluate fabrication procedures. The Al/InP diodes were rectifying and phi sub B(n) less than phi sub B(p), in agreement with our earlier work on Pd/InP diodes. Ohmic contacts to p-type InP were also investigated. The results of a study of a multilayered metal film consisting of Au and Be alloyed to the InP surface, are given. In was found that the Au/Be/p-InP structure when properly heat treated would produce ohmic behavior with r(c) = 0.001 ohm sq cm at a net doping of about 1.0 x 10 to the 17th power per cu cm and r(c) = 0.0002 ohm sq cm at 1.4 x 10 to the 18th power per cu cm. The Au/Be contact was relatively easy to apply but tight control over the Au/Be thickness ratio and heat-treatment cycle was found to be necessary. Author (GRA)

SPECTRUM OF FOUR-TIMES IONIZED NIOBIUM, INCLUDING ZEEMAN STUDIES OF SELECTED LINES AND LASER MODIFICATION OF THE POPULATION OF CERTAIN LEVELS IN A SLIDING SPARK SOURCE

David T. Kagan Jun. 1981 93 p refs
(Contract W-7405-eng-48)
(DE81-027554; LBL-12822) Avail: NTIS HC A05/MF A01

The 4p6nl spectrum of Nb(4+) was measured and analyzed. The spectrum was excited in a vacuum sliding spark source with a peak current of 800 amperes and a pulse width of 70 microseconds. The analysis of the spectrum has extended the 13 known lines to 84 and the 10 known levels to 30. The ionzation energy was estimated to be 407897 cm/l. There is strong evidence that the 4p5 4d2 configuration interacts strongly with the 4p6 nf configuration. In addition, the hyperfine splitting of the 4p6 6s level has been observed and measured to be 1.1 cm/l. An attempt was made to examine the Zeeman spectrum of selected lines of Nb(4+). However, the Doppler broadening of the lines prevented the acquisition of good results. A complete discussion of the Zeeman effect in the Nb(4+) spectrum is contained in the test. In addition, the ability of a laser to modify the population of certain atomic levels in the sliding spark source was investigated.

QUASI-ELASTIC HIGH-PRESSURE WAVES IN 2024 Al AND Cu

C. E. Morris, J. N. Fritz, and B. L. Holian 1981 6 p refs Presented at the Conf. on Shock Waves in Condensed Matter, Menlo Park, Calif., 23-25 Jun. 1981
(Contract W-7405-eng-36)
(DE81-025334; LA-UR-81-1897; CONF-810684-29) Avail: NTIS HC A02/MF A01

Release waves from the back of a plate slap experiment are used to estimate the longitudinal modulus, bulk modulus, and shear strength of the metal in the state produced by a symmetric collision. The velocity of the interface between the metal target and a window material is measured by the axially symmetric magnetic probe. Wave Profiles for initial states up to 90 GPa for 2024 Al and up to 150 GPa for Cu have been obtained. Elastic perfectly-plastic theory cannot account for the results. A relatively simple quasi-elastic plastic model can. DOE

OXIDE EFFECTS ON PHOTOEMISSION FROM HIGH CURRENT GaAs PHOTOCATHODES

E. L. Garwin, R. E. Kirby, and A. Roder Mar. 1981 18 p refs Presented at the Interdisciplinary Surface Sci. Conf., Liverpool, 6-9 Apr. 1981
(Contract DE-AC03-76SF-00515)
(DE81-025129; SLAC-Pub-2715; CONF-810495-2) Avail: NTIS HC A02/MF A01

The failure modes of the GaAs (100) photocathodes (PC's) are characterized. Gradual decreases in electron polarization and intensity are attributed to the physisorption of CO2 on the PC's during running at LN2 temperatures. Such PC's can be rejuvenated by warming to 90 K, i.e., above the CO2 desorption temperature. These PC's recover 90% of their original intensity. A second well characterized failure mode results from overheating the PC during in situ heat cleaning prior to activation. In this mode, AS is preferentially evaporated from the GaAs, leaving a Ga2O2 layer on the surface. This effect has been studied by Auger electrico spectrometry sputter profiling which indicates that the substantial thickness of the oxide layer blocks photoemission. These PC's may only be recovered by chemically removing the oxide layer. A third mode which is not as well characterized appears for thin Ga oxide layers. Properties of these PC's include reduced emission and the presence of a cutoff bias level. Such PC's are also not recoverable in situ.

MOLECULAR DYNAMICS SIMULATION OF GRAIN-BOUNDARY DIFFUSION OF VACANCIES IN bcc IRON

Thomas Kwok, P. S. Ho (IBM Watson Research Center), S. Yip, R. Balluffi, A. W. Brokman, and P. D. Bristowe Jun. 1981 14 p refs
(Contract DE-AS02-78ER-05002)
(DE81-025540; DOE/ER-05002/T2; COO-5002-22) Avail: NTIS HC A02/MF A01

The jumping of vacancies in a bcc iron sigma = 5 tilt boundary was simulated by computer molecular dynamics. The data yielded a reasonable value of the activation energy for migration and showed that the jump processes are highly structure dependent. The use of a temperature dependent transition probability matrix to describe the diffusion of the vacancies in the grain boundary is suggested. Formation of one type of boundary interstitial was observed which was found to be immobile. DOE

TRAPPING AND RELEASE OF IMPLANTED D/H IONS IN FUSED SILICA

G. W. Arnold and B. L. Doyle 1981 16 p refs Presented at the 9th Intern. Conf. on Atomic Collisions in Solids, Lyon, 6 Jul. 1981
(Contract DE-AC04-76DP-00789)
(DE81-024441; SAND-81-0850C; CONF-810728-1) Avail: NTIS HC A02/MF A01

Elastic recoil detection techniques were used to measure hydrogen isotope profiles in fused silica implanted with 20 keV H and/or D ions. Saturation for both H and D implantations at concentrations of 2.1 x 10 to the 21st power ions/cu cm in good agreement with results of gas loading experiments. ETIR measurements indicate that most of the implanted H bonds are in the form of OH. Theoretical analyses using the local mixing model of H trapping provide a good fit to the saturation behavior and subsequent H movement toward the surface. Isochronal annealing shows that both H and D are released in a single stage centered about 550 C. The best theoretical fit is for a 1.9 eV H trap activation energy. DOE

SEMICONDUCTOR MEASUREMENT TECHNOLOGY: THE RELATIONSHIP BETWEEN RESISTIVITY AND DOPANT DENSITY FOR PHOSPHORUS AND BORON DOPED SILICON Final Report
W. R. Thurber, R. L. Mattis, Y. M. Liu, and J. J. Filliben May 1981 58 p refs
(ARPA Order 2397)
(PB81-221327; NBS-SP-400-64; LC-81-600052) Avail: NTIS HC A04/MF A01 CSCL 20L

Data have been obtained for the resistivity dopant density relationship for silicon doped with phosphorus or boron for dopant densities in the range 10 to the 13th power to 10 to the 20th power/cu cm. For dopant densities less than 10 to the 18th power/cu cm, results were calculated from resistivity and junction capacitance voltage measurements on processed wafers. For more heavily doped material, data were obtained from Hall effect and resistivity measurements on specimens cut from bulk silicon slices. GRA

DECAY HEAT CURVE EVALUATION TEST
M. Akiyama, K. Doda, T. Ida, H. Hashidura, M. Oka, and N. Yasu Mar. 1981 62 p refs Transl. into ENGLISH of Rept. UTNL-R-0103 Tokyo Univ., Japan, Mar. 1981 50 p Sponsored by DOE Prepared for ORNL
(DE81-027181; ORNL-tr-4764; UTNL-R-0103) Avail: NTIS HC A04/MF A01

Fission-product decay energy release rates were measured for fast neutron fissions of U-235, Pu-239, U-238, Th-232 and natural uranium for gamma-ray, and U-235 and Pu-239 for beta-ray. Gamma-ray energy spectra were measured using a NaI scintillation detector and beta ray energy spectra were obtained using a plastic scintillation detector combined with a transmission type proportional counter to eliminate gamma-ray effects. The measuremens were made covering times following irradiations from 19 to 24,000 seconds. The spectra data were integrated to provide total energy release rates as a function of time after fission. The present data of beta ray energy release rates are preliminary due to current carrying out of the data analyses. Typical uncertainties in the present data are approximately 5 percent (1 sigma) except for Th-232, and approximately 8 percent for Th-232. The present results were compared with the results of summation calculations using the TASAKA, ENDF/B-IV and JNDC decay data files. DOE

THE INDIVIDUAL VERSUS THE COMPUTER: AN EXAMINATION OF ATTITUDE PROBLEMS AND THEIR IMPACT ON SYSTEM DEVELOPMENT M.S. Thesis
Gayle Jean Plato Jun. 1981 94 p refs
(AD-A104636) Avail: NTIS HC A05/MF A01 CSCL 05/1

Whether rational or irrational in nature, negative feelings toward computer based systems have been a persistent problem for computer implementors and systems managers for many years. People may sometimes fear for the future of their employment, feel intimidated by a technology they do not understand, resent the invasion of privacy associated with indiscriminate data collection, or exhibit a wide variety of other emotional responses. In order to better anticipate, understand and cope with the multitude of emotional reactions and interface problems that potentially may develop among non-technical computer system users, current literature pertaining to such negative attitudes has been explored. With a greater understanding of possible human-computer interface problems, it is believed that managers, computer professionals, system users and social institutions alike can all assume important roles in helping to promote more universally positive interactions and attitudes in the future. APPLYING SCIENCE AND TECHNOLOGY TO IMPROVE LOCAL GOVERNMENT PRODUCTIVITY
K. Janka, Kenneth D. Rainey, Fred Knight, and Thomas Urban Dec. 1980 110 p refs Prepared in cooperation with International City Management Association
(Grant NSF ISP-77-19055)
(PB81-217986; NSF/RA-800488) Avail: NTIS HC A06/MF A01 CSCL 05A

Some insights are outlined for ways to improve productivity and decrease the cost of local government service by making more effective use of science and technology (S&T). Results of a survey of 205 cities indicated the high priority items to be: predict ramifications and weight consequences; work with other departments; train personnel; employee and labor relations; and human relations. Steps involved in the process include preparation, or understanding the problems of the organization; formulation, or clarifying the issues; designing solutions; making plans and taking action; and evaluating the changes resulting from the actions taken. Early involvement of workers in identifying problems and implementing solutions is stressed. GRA

MICROFICHE AS A VEHICLE FOR TECHNICAL REPORTS Final Report
George W. Reinhart Feb. 1981 40 p refs
(Contract LEAA-79-NI-R-004)
(PB81-228009) Avail: NTIS HC A03/MF A01 CSCL 05B

The possibility of improving the cost effectiveness of an information dissemination program by making a larger part of the dissemination in microfiche instead of paper copy is examined. Most of the advantages of microfiche accrue to the producer, and most of the disadvantages to the user. There is likely to be considerable resistance to broadening the use of fiche for the intended audience of criminal justice professionals. Several alternatives are presented for lessening this problem, including emphasis on the role of libraries, promoting the availability of fiche-to-paper copiers, and using microfiche itself in innovative ways to facilitate information transfer, rather than as an attempt to duplicate the features of a paper publication in a reduced size. GRA

INTEGRATING MEDICAL KNOWLEDGE AND CLINICAL DATA BANKS: DISCOVERY AND REPRESENTATION OF CAUSAL RELATIONSHIPS FROM A LARGE TIME-ORIENTED CLINICAL DATABASE. THE RX PROJECT Final Executive Summary, 1 May 1980 - 30 Apr. 1981
Gio C. Wiederhold and Robert L. Blum 18 Jun. 1981 43 p
(Grants HS-3650; LM-03370; RR00785)
(PB81-227233; NCHSR-81-144) Avail: NTIS HC A03/MF A01 CSCL 05B

The objective of the RX Project is to develop methods for:

increasing the validity of medical knowledge derived from large time-oriented databases containing routine, non-randomized clinical data; providing knowledgeable assistance to a research investigator in studying medical hypotheses on large databases; and fully automating the process of hypothesis generation and exploratory analysis. The RX computer program consists of a knowledge base (KB), a discovery module, a study module, and a clinical database. Utilizing techniques from the field of artificial intelligence, the KB contains medical and statistical knowledge hierarchically organized, and is used to assist in the discovery and study of new hypotheses. Confirmed results from the database are automatically encoded into the KB. GRA

AGREEMENT GOVERNING THE ACTIVITIES OF STATES ON THE MOON AND OTHER CELESTIAL BODIES
E. D. Gaggero and R. Puceiro Ripoll Sep. 1981 35 p refs Transl. into ENGLISH from McGill Univ. Ann. of Air and Space Law (Canada), v. 5, 1980 p 449-480 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Montevideo Univ., Uruguay
(Contract NASw-3541)
(NASA-TM-76730) Avail: NTIS HC A03/MF A01 CSCL 05D

The treaty on the Moon is not revolutionary but it embodies the legal rule for future activities of man on the Moon as opposed to the Space Treaty of 1967 which was too general. The new text is conservative but still allows some room for the developing States as in the law of the sea. The Moon is declared the 'Common Heritage of Mankind' but the regime of exploitation of its resources is still blurred with imprecise guidelines still needing to be developed. The two superpowers cannot as in the past, ignore the rest of the world in the conquest of space and the fact that the U.N. is the depositary for ratifications, and not the two superpowers as in previous treaties, is the first sign of wider participation in the creation of Space Law. JET IMPINGEMENT HEAT TRANSFER ENHANCEMENT FOR THE GPU-3 STIRLING ENGINE
Douglas C. Johnson, Craig W. Congdon, Lester L. Begg, Edward J. Britt, and Lanny G. Thieme Oct. 1981 28 p refs
(NASA-TM-82727; DOE/NASA/51040/33) Avail: NTIS HC A03/MF A01 CSCL 13F

A computer model of the combustion-gas-side heat transfer was developed to predict the effects of a jet impingement system and the possible range of improvements available. Using low temperature (315 C (600 F)) pretest data in an updated model, a high temperature silicon carbide jet impingement heat transfer system was designed and fabricated. The system model predicted that at the theoretical maximum limit, jet impingement enhanced heat transfer can: (1) reduce the flame temperature by 275 C (500 F); (2) reduce the exhaust temperature by 110 C (200 F); and (3) increase the overall heat into the working fluid by 10%, all for an increase in required pumping power of less than 0.5% of the engine power output. Initial tests on the GPU-3 Stirling engine at NASA-Lewis demonstrated that the jet impingement system increased the engine output power and efficiency by 5% - 8% with no measurable increase in pumping power. The overall heat transfer coefficient was increased by 65% for the maximum power point of the tests. A.R.H.

N82-11994*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.
EVALUATION OF THE MICRO-CARBURETOR

Merkel F. Weiss, Robert A. Hall, and Steven D. Mazor Aug. 1981 63 p refs
(Contracts NAS7-100; DE-AI01-79CS-50080)
(NASA-CR-164958; JPL-Pub-81-75) Avail: NTIS HC A05/MF A01 CSCL 13F

A prototype sonic, variable-venturi automotive carburetor was evaluated for its effects on vehicle performance, fuel economy, and exhaust emissions. A 350 CID Chevrolet Impala vehicle was tested on a chassis dynamometer over the 1975 Federal Test Procedure, urban driving cycle. The Micro-carburetor was tested and compared with stock and modified-stock engine configurations. Subsequently, the test vehicle's performance characteristics were examined with the stock carburetor and again with the Micro-carburetor in a series of on-road driveability tests. The test engine was then removed from the vehicle and installed on an engine dynamometer. Engine tests were conducted to compare the fuel economy, thermal efficiency, and cylinder-to-cylinder mixture distribution of the Micro-carburetor to that of the stock configuration. Test results show increases in thermal efficiency and improvements in fuel economy at all test conditions. Improve fuel/air mixture preparation is implied from the information presented. Further improvements in fuel economy and exhaust emissions are possible through a detailed recalibration of the Micro-carburetor. Author

ASSESSMENT OF FLYWHEEL SYSTEM BENEFITS IN SELECTED VEHICLE APPLICATIONS
L. H. Kubo and L. Forrest 1981 7 p refs Presented at IECEC Conf., 5 Aug. 1981
(Contract DE-AC08-79ET-26306)
(DE81-025976; CONF-810812-31) Avail: NTIS HC A02/MF A01

The performance of vehicle systems incorporating energy storage flywheels was investigated. The effort involved an indept assessment of flywheel system benefits in two vehicle applications: a four-passenger commuter car with electric drive (flywheel range extension application) and a six-passenger family car with conventional heat engine drive (flywheel fuel conservation application). The special case of the six-passenger vehicle as used in taxicab service was also investigated. A number of possible component design/selection alternatives for flywheel rotors, continuously variable transmissions, batteries, motors, and other propulsion elements were examined. Results of the assessment are provided for the case of a series-configuration heat engine/flywheel drive train as used in the passenger car and urban taxi vehicle missions. DOE

FORECAST OF EMERGING TECHNOLOGIES Final Report
Jun. 1981 119 p
(PB81-227290; FDA/ACPE-81/95) Avail: NTIS HC A06/MF A01 CSCL 06E

A compilation and analysis of information collected during a study of emerging technologies that may affect, or be affected by, FDA within the next 5-15 years are presented. A total of 168 distinct new technologies and/or substantially different aspects of single technologies were identified by scientific experts inside and outside of FDA. Study participants were also asked to estimate the approximate time of arrival and barriers (cost risk, technical problems) that may affect the technologies arrival. About 25 pecent of the technologiezs identified were related to the areas of genetic engineering or advances in computer technology. According to study participants, each of the ten most frequently mentioned new technologies may arrive within the next five years. T.M.

OBSERVATIONS OF MOLECULAR CLOUDS CONTAINING REFLECTION NEBULAE Ph.D. Thesis
Dennis Edward Machnik 1981 210 p
Avail: Univ. Microfilms Order No. 8121154

The rotational transition of the linear molecule CO, and the less abundant species C13O, in about 130 molecular clouds associated with reflection nebulae are observed. Contour maps of the 2.6 mm wavelength emission are presented for a number of regions mapped in reflection nebulae where enhanced CO emission was observed. While the CO emission enhancement was noted to lie in the vicinity of the moderately early type star illuminating the reflection nebula, there is a tendency for the CO peak to be slightly displaced from the star. The observations of two species of this molecule allow a rough classification of the emission enhancements as enhancements of either density or temperature. Both types were observed. Tables are given of parameters for the illuminating stars, along with parameters describing the CO and C13O emission towards the star and emission peaks. A number of cloud parameters and star parameters are compared for the whole group of nebulae in the survey, in order to search for possible correlations between parameters. Part of the purpose of this program was the study of regions near young stars, and the interactions between the star and the young stars, and the interactions between the star and the surrounding medium. The possibility that the star was recently created out of the material observed in the region is discussed. Dissert. Abstr.

X-RAY AND GAMMA-RAY OBSERVATIONS OF PULSED EMISSION FROM RADIO PULSARS Ph.D. Thesis
Frederick Keck Knight 1981 147 p
Avail: Univ. Microfilms Order No. 8120532

A search for pulsed emission from radio pulsars in the energy range 15 keV to 10 MeV was conducted using the hard X-ray and low energy gamma-ray instrument on the HEAO-1 spacecraft. From a sample of twelve candidate radio pulsars, only the Crab pulsar was detected, and upper limits to the intensity of emission from the other candidates indicate that the majority (7 to 10) do not emit more than a few percent of their rotational energy loss in hard X-rays. Observations of the 18-200 keV pulsed emission from the Crab pulsar show that the systematic variation of spectral slope as a function of pulse phase, discovered at lower energies (4-60 keV), continues up to approximately 200 keV, strengthening the case for the existence of at least two pulsed emission components: the emission from the two main pulse peaks and a separate interpulse emission connecting the two peaks. Dissert. Abstr.

H-ALPHA EMISSION FROM A DISK IN THE CLOSE BINARY U CEPHEI: A MONTE CARLO SIMULATION Ph.D. Thesis
Richard Clayton Crawford 1981 177 p
Avail: Univ. Microfilms Order No. 8120936

Twenty-four H alpha spectrograms of the eclipsing binary U Cephei were obtained during its 1974-1976 outburst. The line profiles on the ten of those obtained during total eclipse display prominent emission from matter in a ring or disk surrounding the hotter component. The emission is analyzed under the assumption of low optical depth, and this assumption is then verified by a Monte Carlo synthesis on the line profiles. The Monte Carlo simulation is useful for the calculation of line profiles from regions with optical depths less than unity. The velocity structure of the emitting region is composed of two components--rotation and 'turbulence'. The rotational velocity is inversely proportional to the radius, although it is approximately Keplerian circular near the star. The width of the emission profiles leads to disordered velocities (herein called 'turbulence') on the order of 100 km/sec, with no strong radial dependence. This turbulence includes deviations from axial symmetry in the rotational velocity as well as eddies and/or other motions. Dissert. Abstr.

PHOTOELECTRIC SURFACE BRIGHTNESS OBSERVATIONS AND THE GEOMETRY OF REFLECTION NEBULAE Ph.D. Thesis
Matthew James Cottrell 1981 179 p
Avail: Univ. Microfilms Order No. 8121650

Photoelectric surface brightness measurements of three reflection nebulae: IC 5076, NGC 1432, and the nebulosity are illuminated by 17 Tauri are reported. These observations are corrected for instrumentally scattered light and for variable sky background contamination. Similar observations of a fourth nebula Cederblad 201, are also discussed. Techniques for modelling the surface brightness distributions of nebulae are discussed, including two models for the nebula IC 5076. Using relatively well known grain properties at visible wavelengths, the geometry of each object and its ultraviolet brightness distributions are investigated. Dissert. Abstr.

OPTICAL AND ULTRAVIOLET STUDIES OF STELLAR CHROMOSPHERES OF LAMBDA ANDROMEDAE AND OTHER LATE-TYPE STARS Ph.D. Thesis
Sallie Louise Baliunas 1980 236 p
Avail: Univ. Microfilms Order No. 8120243

Chromospheric studies of the outer atmospheres of several late type stars are preseted along with a comprehensive study of lambda Andromedae, an active chromosphere star. Investigations were made of the chromospheric features of Ca II H and K, Mg II h and k, and other, high temperature emissions accessible to the Copernicus and international ultraviolet satellites. Analogues to solar activity are consistent with the spectral behavior of the chromospheric indicators. The chromospheric activity and variability in Ca II H and K in lambda and are similar to sunspot and solar flare activity. In addition, a search was begun for short-timescale (few minutes) fluctuations in the H and K cores in several late-type stars. Calibrated spectrophotometry for the Ca II K profiles and additional constraints provided by H alpha and the ultraviolet observations of Mg II and the high temperature transition-region emissions were employed in the construction of semi-empirical chromospheric models of lambda And, alpha Aur, and alpha Boo. A prescription is given for models of active chromosphere stars, which may also be useful for other late type stars. Dissert. Abstr.

THEORETICAL STUDIES OF CHROMOSPHERES AND WINDS IN COOL STARS Semiannual Report, 1 Apr. - 30 Sep. 1981
A. K. Dupree Nov. 1981 8 p
(Grant NAGw-100)
(NASA-CR-164969; SAR-2) Avail: NTIS HC A02/MF A01 CSCL 03A

Calculated radiative losses from H, H-, Ca II, and Mg II show that cooling for the chromosphere of the supergiant epsilon Gem do not differ greatly from the solar law, although there are differences at approximately 6000K due to ionization effects. With a rough standard law for computation of stellar winds using the Hartmann-MacGregor theory and standard stellar evolutionary calculations, the wind velocities and temperatures in the HR diagram were systematically explored. Results show that cool winds with tempratures < 1,000,00K are not possible for log g > or = 2. Predicted wind velocities are approximately 1.5 to 2 x larger than observed, particularly for the most luminous cool stars. The ionization balance for the wind of alpha ORI and the hydrogen profile lines for T Tauri stars were computed using the PANDORA computer program. A.R.H.

NONRADIAL PULSATIONS OF UPSILON ORIONIS AND SUPERGIANTS
A. N. Cox 1981 4 p refs Presented at Workshop on Pulsating B Stars, Nice, 1-5 Jun. 1981 Submitted for publication
(Contract W-7405-eng-36)
(DE81-025338; LA-UR-81-1908; CONF-8106112-2) Avail: NTIS HC A02/MF A01

The overshooting nonradial mode driving for a pulsating star very close to the main sequence (upsilon Orionis) and for the nonradial pulsations of an A supergiant not too unlike alpha Cygnus types are discussed. A 15 solar mass 30,000 K model of less than on million years was constructed for upsilion Orionis, and a 25 m. 10,000 k model was constructed for the supergiants. Overshooting from a convective core or a convective shell was found to be a likely cause of pulsations in near sequence B stars and in supergiants. DOE

LINEAR AND NONLINEAR THEORY STUDY OF ALPHA VIRGINIS
Arthur N. Cox, Stephen W. Hodson, and Sean P. Clancy 1981 11 p refs Presented at the Workshop on Pulsating B Stars, Nice, 1-5 Jun. 1981
(Contract W-7405-eng-36)
(DE81-025335; LA-UR-81-1907; CONF-8106112-1) Avail: NTIS HC A02/MF A01

Nonlinear radiation hydrodynamic calculations using a model for Alpha Virginis, a beta Cephei star, were made to see if the cause of the recurrent radial pulsation epochs can be discovered. The basic observed characteristics of beta Cephei variables are presented. Various proposals reviewed to make these stars pulsate concludes that the excitation mechanism must be in the central convective core or variable composition regions. The envelope damps radial fundamental mode pulsations in 4 years and in even shorter periods for radial overtones. It is proposed that the mixing of envelope hydrogen into the hydrogen depleted (or even exhausted) core can produce periodic pressure pulses which drive the pulsation amplitude up to the observed value. During the decay of the pulsations, evolution toward higher luminosities enables further episodes of mixing and driving to occur. It is predicted that rapid amplitude increases when mixing occurs and a slow decay of radial (and nonradial modes for other beta Cephei variables) between mixing episodes. DOE

THEORETICAL AND OBSERVATIONAL ASPECTS OF STELLAR VARIABILITY Ph.D. Thesis
Daniel William Peterson 1981 143 p
Avail: Univ. Microfilms Order No. 8122554

Hot spots on accreting white dwarfs with magnetic fields are investigated. It is found that various loss mechanisms do not destroy the accretion spots and that pulsed ultraviolet radiation will be emitted as the dwarf rotates. This pulsed radiation should be observable from dwarf companions near giant stars undergoing mass loss by a stellar wind and from slowly moving dwarfs accreting from the interstellar medium. A search for variability in three Hyades white dwarfs, G8-7, G7-41, and G7-255 is described. Data analysis by the maximum entropy method shows all three stars to be nonvariable. The use of the O-C diagram as a diagnostic tool in doubly periodic stars is investigated. A test is developed to distinguish between short and long secondary periods by using the amplitude of the O-C diagram. Application of this test to the RRs variable VZ Cnc establishes that this star is a multiple mode variable, and these results are confirmed by phase dispersion minimization analysis. Dissert. Abstr.

A SELF-CONSISTENT LINEAR-MODE ANALYSIS OF A STELLAR CONVECTION ZONE Ph.D. Thesis
Joel Mirick MacAuslan 1981 131 p
Avail: Univ. Microfilms Order No. 8119542

It is shown that a normal-mode expansion of the linearized fluid equations in terms of a subset of spherical harmonics can provide the basis for a self-consistent description of a solar-like convection zone. The linear modes growing from a static background, are assumed inviscid and adiabatic for self-consistency, they, together with radiation, carry exactly the constant flux required by the model. When the resulting equations are simplified according to physically motivated prescriptions, with the amplitude of the modes set by a shear criterion related to the Kelvin-Helmholtz instability, the equations contain a single free parameter, related to the persistence of linearity. Numerical solution of the equations for a simplified solar envelope and a simple spectrum of modes produces a variety of models of different persistences; it also leads to identification of the amplitude parameter with the efficiency of convection. The models show wide variation in power at various horizontal wavenumbers, in both peak luminosity and surface velocity spectra. Dissert. Abstr.

N82-12009 Washington Univ., Seattle.
THE BOGOLIUBOV TRANSFORMATION AND ITS APPLICATION TO COSMOLOGICAL PARTICLE PRODUCTION Ph.D. Thesis
Terry Lee Dannehold 1981 86 p
Avail: Univ. Microfilms Order No. 8122730

The Bogoliubov transformation, which is a linear combination of creation and annihilation operators, is discussed. The invariance of the commutation relations is examined. The Bogoliubov transformation is applied to the problem of particle production in curved space. In particular, it is shown the conseration laws constrain particles produced by gravitational fields to be created in pairs, with a thermal spectrum, when the initial state is the vacuum. Initial states containing n particles are also treated. The creation and detection of particls is then examined in terms of information theory. The nonexistance of a time-like Killing vector in Robertson-Walker universe implies a 'noise' term in the equations governing conservation of energy and this term is responsible for particle creation. An equation for the particle production rate is deduced. It is then shown that cosmological particle production theories may be tested by calculating the gamma ray spectrum due to the decay of short-lived particles which are produced. Dissert. Abstr.

COMPUTATION OF AVERAGED MONTHLY ZONAL ALBEDO UTILIZING THE SOLAR ZENITH ANGLE, PROPERTIES OF CLEAR AND CLOUDY ATMOSPHERES
Harbans Dhuria Aug. 1981 93 p refs
(Grant NAG5-75)
(NASA-CR-164930) Avail: NTIS HC A05/MF A01 CSCL 03B

The zonal temporal averages of albedos at the top of the atmosphere were considered as a function of the length of the day. The length of the day were used to determine the average daily values of mu sub 0(=Cos of the solar zenith angle, theta sub 0). Polynominal fits of the slope and intercept functions of A sub s (cloud-free albedo) and A sub c(cloud albedo) as function of Cos theta sub 0 were obtained by using the sample values of albedo corresponding to solar zenith angles from 0 to 90 deg with interval of 5 deg. The daily zonal values of mu sub 0 and the surface albedos were used to compute the daily zonal values of albedos at the top of the clear and cloudy atmosphere. The monthly zonal cloud fractions were used to compute planetary albedo A at the top of the atmosphere. The global values of monthly albedos A sub s, A sub c and A were computed by using the weighting function defined as the difference of the sins of zonal values of latitudes. The computer program implementation is also described. B.W.

A MODEL OF THE NORMAL AND NULL STATES OF PULSARS
P. B. Jones 1981 25 p refs
(PB81-215907; Rept-24/81) Avail: NTIS HC A02/MF A01 CSCL 03B

A solvable three dimensional polar cap model of pair creation and charged particle acceleration is derived. There are no free parameters of significance apart from the polar surface magnetic flux density. The parameter CO determining the acceleration potential difference was obtained by calculation of elementary nuclear and electromagnetic processes. Solutions of the model exist for both normal and null states of a pulsar, and the instability in the normal state leading to the normal to null transition is identified. The predicted necessary condition for the transition is entirely consistent with observation. Author

A THEORETICAL AND EXPERIMENTAL INVESTIGATION OF THE PHOTOMETRIC FUNCTIONS OF PARTICULATE SURFACES Ph.D. Thesis
Jay David Goguen 1981 234 p
Avail: Univ. Microfilms Order No. 8119442

Photometric functions of particlate materials are measured and modelled to infer physical characteristics and planetary surfaces from photometry. Model photometric functions are based on the solution of the radiative transfer equation (RTE) for a specified single particle phase function phi and the modification of the RTE solution for interparticle shadowing S adopted from

Irvine (1966). A survey of phase functions due to Fresnel reflection from large, opaque, smooth spheres with optical constants in the range of most common rocks and minerals reveals a systematic trend in the Bond albedo A sub B and asymmetry parameter g with composition: low indices of refraction correspond to low albedos and strong forward scattering; high indices of refraction correspond to high albedos and nearly isotropic scattering. Adding roughness on a scale compared to a wavelength reduces A sub B up to 25%; the albedos of darker particles are parameter shown an approximately linear decrease of 0.12 from 0 to 45 deg. rms slope independent of composition. Dissert. Abstr.

THE MORPHOLOGY AND EVOLUTION OF GANYMEDE AND CALLISTO Ph.D. Thesis
Steven Weldon Squyres 1981 353 p
Avail: Univ. Microfilms Order No. 8119466

High quality images of Ganymede and Callisto, obtained by the two Voyager spacecraft are used to investigate the surface characteritics, geologic processes, and internal evolution of Ganymede and Callisto. Ganymede shows two principal types of terrain. One is dark, old, and heavily cratered ('cratered terrain'); the other is brighter, younger, and characterized by complex patterns of grooves ('grooved terrain'). The surface of Callisto is uniformly dark, heavily cratered, nearly free of bright ray craters, and shows no evidence of tectonic activity. Voyager images are used to determine photometric properties of surface features on both bodies at phase angles up to 120. Surface temperatures are calculated for the major terrain types. Callisto is found to be somewhat warmer than Ganymede. The temperature difference between grooved and cratered terrain on Ganymede is small. Dissert. Abstr.

THE OPPOSITION EFFECT OF PARTICULATE MINERAL SURFACES AND CONDENSATES: APPLICATIONS TO SATURN'S RINGS Ph.D. Thesis
Larry Kenneth Pleskot 1981 210 p
Avail: Univ. Microfilms Order No. 8121032

It is established that opposition brightening is common in bright materials. Thus, bright and dark surfaces commonly exhibit the phenomenon, but the nature of retroreflection in bright and dark laboratory samples is found to be significantly different. Some of the differences between retroreflective properties of bright and dark samples are consistent with albedo dependences of individual mechanisms; other differences suggest that prevalent mechanisms in bright and dark samples are distinct. Condensates possess retroreflection parameters similar to the rings'. Yet, opposition brightening in typical laboratory condensates is only about a third as strong as in the rings. Two conclusions result. First, intraparticle retroreflection probably occurs in the rings, and ring observations should not be directly used in multilayer ring models. Second, interparticle retroreflection in the rings also appears necessary to reconcile ring data with typical laboratory observations. However, variations of independed parameters such as surface roughness or mixing can produce enahanced retroreflection in laboratory condensates. Thus, the observed opposition effect of the rings may be entirely attributable to an intraparticle mechanism. Observational support for the classical ring model is thereby weakened. Dissert. Abstr.

RADIATIVE TRANSFER IN COMETARY DUST ATMOSPHERES: CRITIQUE OF RECENT DEVELOPMENTS
Oldwig vonRoos 1 Oct. 1981 20 p refs
(Contract NAS7-100)
(NASA-CR-164946; JPL-Pub-81-80) Avail: NTIS HC A02/MF A01 CSCL 03B

The gas and dust production rates of comets near the sun are intimately linked to the fate of the solar radiation as it is scattered and partially absorbed by the cometary dust envelope or halo surrounding the comet's nucleus. The radiation of nuclear matter (mostly water ice) and the release of dust particles embedded in the ice which are entrained by the escaping gas and subsequently form a dust atmosphere or halo. On the other hand, the interaction of the dust cloud with the solar radiation is in turn responsible for the amount of radiative energy received by the nucleus and thus determines the evaporation rate. It is shown that recent attempts to formulate this problem quantitatively are in error. The correct formulation is given and it is pointed out that negative extinction (enhancement of the primary radiation received by the nucleus due to multiple scattering) may not be as large as predicted. SEARCH FOR OPTIMAL THREE-DIMENSIONAL MAPPING OF THE SOLAR CORONA FROM K-CORONAMETER DATA
R. Michael Perry and Martin D. Altschuler Apr. 1981 102 p refs
(Grant NSF ATM-77-23757)
(PB81-222903; NCAR/TN-170) Avail: NTIS HC A06/MF A01 CSCL 03B

An iterative technique was devised in which an approximation of the unknown solar electron density distribution is successively modified to reduce discrepancies with the original data. With the technique the corona can be mapped to a much finer resolution than shown in their previous papers without greatly increasing the computational cost. The series representation of density may now contain more than 23,000 terms compared with the previous limit of 128. This results in a fourfold increase in linear resolution, so that features about a tenth of a solar radius in width are now separate. The iteration algorithm can be adjusted to apply a mathematically optimal correction to a given approximation of the density. Although this correction minimizes noise levels, a cheaper version of the algorithm yields a better result. GRA

COMPRESSIBLE CONVECTION IN A ROTATING SPHERICAL SHELL
Gary A. Glatzmaier 1980 200 p refs
(Grant NSF ATM-77-23757)
(PB81-222895; NCAR-CT-60) Avail: NTIS HC A09/MF A01 CSCL 03B

A hydrodynamical model of giant cell convection is used to gain further understanding of how differential rotation is maintained on the Sun. Anelastic fluid equations are derived for a compressible, rotating, spherical fluid shell. Then first order numerical solutions of these equations are found which describe the stability and structure of the giant cell convection in many different regions of parameter space. First order analytic solutions provide simple, physical explanations for the longitudinal phase propagation manifested in the numerical solutions. Second order numerical solutions are then calculated which describe the mean differential rotation and meridional ciculation induced by the first order solutions. GRA

A REVIEW AND INTERPRETATION OF RECENT COSMIC RAY BERYLLIUM ISOTOPE MEASUREMENTS

Andrew Buffington 26 Apr. 1978 28 p refs Presented at a Symp., Washington, D.C., 26 Apr. 1978; sponsored by the Am. Phys. Soc. Submitted for publication
(Grant NGR-05-003-553; Contract W-7405-eng-48)
(NASA-CR-164967) Avail: NTIS HC A03/MF A01 CSCL 03B

Beryllium-10 is of interest for cosmic ray propagation, because its radioactive decay half-life is well matched to the expected cosmic ray age. Recent beryllium isotope measurements from satellites and balloon covered an energy range from about 30 to 300 MeV/nucleon. At the lowest energies, most of the Be-10 is absent, indicating a cosmic ray lifetime of order 2 x 10 to the 7th power years and the rather low average density of 0.2 atoms/cc traversed by the cosmic rays. At higher energies, a greater propagation of Be-10 is observed, indicating a somewhat shorter lifetime. These experiments will be reviewed and then compared with a new experiment covering from 100 to 1000 MeV/nucleon. Although improved experiments will be necessary to realize the full potential of cosmic ray beryllium isotope measurements, these first results are already disclosing interesting and unexpected facts about cosmic ray acceleration and propagation. DIFFERENCE METHOD IN FLUID DYNAMICS. 1. NUMERICAL SOLUTION OF TWO DIMENSIONAL VORTICITY EQUATION c34

Guo Benyu *In its* Acta Mech. Sinica (Selected Articles) FTD-ID(RS)T-0705-81 15 Sep. 1981 p 1-34 refs Transl. into ENGLISH from Acta Mech. Sinica (China), no. 2, 1979 (For primary document see N82-12021 02-99)
Avail: NTIS HC A05/MF A01 CSCL 20/4

With the two dimensional vorticity equation as an example, the theoretical problem of difference equations in fluid dynamics is discussed. Schemes based on the conservation laws and transport properties are constructed. Generalized stability is introduced. The error of periodic solutions is rigorously estimated. The effect of error in boundary values on the stability of computation and the boundary shape, boundary conditions and its treatment in the initial/boundary problems are analyzed. The computational problem of nonviscous flow and large gradient solution is treated according to the conservation laws. The convergence of dynamic relaxation and the existence of solutions of steady flow computational schemes are studied. Examples are used to illustrate the applications of these results in fluid dynamic computations and numerical weather forecast. J.D.H.

ON THE KERNEL FUNCTION COLLOCATION METHOD IN STEADY SUBSONIC FLOW FOR WING WITH CONTROL SURFACES c02

Chen Jing Song *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0705-81) 15 Sep. 1981 p 35-50 refs Transl. into ENGLISH from Acta Mech. Sinica (China), no. 2, 1979 (For primary document see N82-12021 02-99)
Avail: NTIS HC A05/MF A01 CSCL 20/4

The forms of the lift distribution function for wings with control surfaces in steady subsonic flow are analyzed. Methods for treating kernel singularities of linear integral equations and singularities of the lift distribution function are discussed and the numerical solution to the integral equation is given. These methods may be used to calculate the lift distribution of the wing by itself or of the wing with partial or full control surfaces on both the leading and trailing edges. The numerical values agree well with experimental data and have the same accuracy as those given by other theories. As compared with the vortex lattice method, the computational storage requirement for this method is smaller and the computational time is less. The numerical computation may be carried out on smaller computers.

Avail: NTIS HC A05/MF A01 CSCL 20/4

The various geometric parameters of the internal burning star grain, the characteristic parameters of solid propellant, and the technical specifications of the rocket motor are combined, the set of design equations established according to the best principle of grain design, and the set of equations solved quickly by incorporating simple equations and curves. This method not only involves less computational work than geometric methods and guarantees the required technical specifications but also yields a design that approaches the optimal, improves the characteristics of the rocket motor, saves materials, and requires less computer time. J.D.H.

NUMERICAL COMPUTATION AND ANALYSIS OF THE FLOW FIELD IN A LARGE SHOCK TUBE WITH A VARIABLE CROSS-SECTIONAL AREA c34

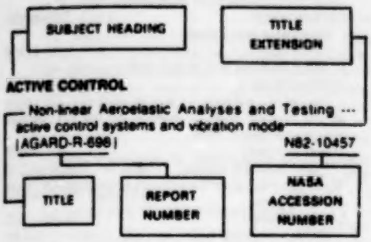
Wen Xuan Li and Jiajun Wang *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0705-81) 15 Sep. 1981 p 75-83 refs
Transl. into ENGLISH from Acta Mech. Sinica (China), no. 2, 1979 (For primary document see N82-12021 02-99)
Avail: NTIS HC A05/MF A01 CSCL 20/4

Certain flow characteristics of the new shock wave that exists in shock tubes with violently varying cross section are analyzed. The state equation of the explosive gas produced by the combustion of the explosive in the high pressure section and the contact discontinuity between the explosive gas and air are taken into consideration. In order to treat many strong discontinuities, the difference method with artificial viscosity term q is adopted. The Lagrangian coordinates are used so that the contact discontinuities can be easily treated. The head of the major shock wave has little vibration, occupying only 2-3 grid spacings. J.D.H.

SUBJECT INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 2

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

A

A-7 AIRCRAFT
A comparison of theoretical and experimental pressure distributions for two advanced fighter wings
[NASA-TM-81331] N82-11054
System safety program plan — electromagnetic pulse testing of the A-7E aircraft
[AD-A104557] N82-11354

ABLATIVE MATERIALS
A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026

ABSORBENTS
Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030705] N82-11405
Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671

ABSORBERS (MATERIALS)
Use of a vegetative filter zone to control fine-grained sediments from surface mines
[PB81-226110] N82-11674

ABSORPTION SPECTROSCOPY
Submicron-particle absorption spectroscopy by photothermal modulation of MIE scattered light
[DE81-028098] N82-11160
Guide to the evaluation and use of an atomic absorption spectrophotometer
[PB81-222953] N82-11444

ABSORPTIVITY
A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166708] N82-11510
Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855

ABSTRACTS
NASA Patent Abstracts bibliography: A continuing bibliography, section 1, abstracts. Supplement 19
[NASA-SP-7039(19)-SEC-1] N82-11981

ACCESS CONTROL
Multiaccess of a slotted channel by finitely many users
[AD-A104417] N82-11349
User's guide: Voice and data communications protection
[PB81-221509] N82-11356
Some notes on operating-system principles
[DE81-030675] N82-11818

ACCIDENT PREVENTION
Preventing large-battery explosions
[PB81-227373] N82-11628

ACID RAIN
Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11648

ACIDITY
Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027087] N82-11695

ACOUSTIC ATTENUATION
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11198
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857

ACOUSTIC EMISSION
Detection of acoustic emission in composites by optical fiber interferometry N82-11125
Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127
Optical detection of pulsed surface particle displacements N82-11131
Wideband optical measurements of ultrasonic pulses N82-11132

ACOUSTIC IMPEDANCE
A new method for measuring the acoustic impedance of the ground N82-11856

ACOUSTIC LEVITATION
System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861

ACOUSTIC MEASUREMENTS
Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: Including acousto-optic techniques
[DE81-029626] N82-11381
A new method for measuring the acoustic impedance of the ground N82-11856
Handbook for industrial noise control
[NASA-SP-5108] N82-11858

ACOUSTIC PROPAGATION
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860

ACOUSTICS
Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855

ACOUSTO-OPTICS
Thermal expansion of metal matrix composites --- acousto-optic study of microcracks and temperature measurement
[AD-A104660] N82-11134
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229
Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: Including acousto-optic techniques
[DE81-029626] N82-11381

ACTINIDE SERIES COMPOUNDS
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150

ACTINIUM
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

ACTIVATED CARBON
Adsorption of mixed liquids and solids from water solution onto activated carbon N82-11141
Sewage sludge additive
[NASA-CASE-NPO-13877-1] N82-11634

ACTIVATION
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11188

ACTIVATION ENERGY
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025567] N82-11577
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973

ACTUATORS
Aircraft digital input controlled hydraulic actuation and control system
[AD-A104263] N82-11072

ADAPTIVE CONTROL
Practical design and realization of a digital adaptive flight control system N82-11079
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787

ADAPTIVE FILTERS
Recovery of seismic signals in noise by adaptive processing
[DE81-029489] N82-11713
Constrained adaptive least mean squared filters
[AD-A104625] N82-11830

ADDITIVES
The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11206
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104668] N82-11213
Sewage sludge additive
[NASA-CASE-NPO-13877-1] N82-11634

ADDRESSING
Automatic multi-banking of memory for microprocessors
[NASA-CASE-NPO-15295-1] N82-11785

ADHESION
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183
Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434

ADHESIVE BONDING
Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127
Waves guided by a thin viscoelastic layer between elastic solids N82-11129
ADHESIVES
Thermal control coatings based on trialkoxysilane hydrolysate binders — tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206
Chemorheology and quality control for an adhesive
[AD-A104588] N82-11215
ADJOINTS
Sensitivity theory for nonlinear systems. 2: Extensions to additional classes of responses
[DE81-030256] N82-11845
ADRENAL METABOLISM
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760
ADRENOCORTICOTROPIN (ACTH)
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760
ADSORPTION
Adsorption of mixed liquids and solids from water solution onto activated carbon N82-11141
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967
AERATION
Ocean thermal energy conversion gas-desorption studies. Volume 2: Deaeration in a packed column and a barometric intake system
[DE81-030489] N82-11619
Stabilization characteristics of deposits of biologic solids generated in aerated lagoons
[PB81-224297] N82-11666
AERIAL PHOTOGRAPHY
A method for using aerial photos in delineating historic patterns of beach accretion and retreat
[PB81-223696] N82-11536
AEROACOUSTICS
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071
AERODYNAMIC CHARACTERISTICS
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051
A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite element algorithm
[AD-A104514] N82-11055
AERODYNAMIC COEFFICIENTS
Wind-tunnel results for a modified 17-percent-thick low-speed airfoil section
[NASA-TP-1919] N82-11033
AERODYNAMIC CONFIGURATIONS
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071
AERODYNAMIC FORCES
An influence coefficient method for the application of the modal technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070
AERODYNAMIC HEATING
A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026
Non-solar power tests at the Central Receiver Test Facility (CRTF)
[DE81-086665] N82-11604
AERODYNAMIC NOISE
Aircraft wing trailing-edge noise
[NASA-CR-164962] N82-11039
AERONOMY
National Center for Atmospheric Research
[NCAR/AR-80] N82-11692
Geomagnetic observations N82-11693
Report on research at AFGL
[AD-A104513] N82-11704
AEROSOLS
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637
Chebyshev polynomial approximation in the OPAQUE program
[AD-A104317] N82-11638
Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11651
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11686
The deconvolution of aerosol backscattered optical pulses to obtain system-independent aerosol signatures
[AD-A104578] N82-11914
AEROSPACE ENGINEERING
Theory and applications of optimal control in aerospace systems
[AGARD-AG-251] N82-11073
An overview of optimal control in aerospace systems N82-11074
AEROSPACE SYSTEMS
Theory and applications of optimal control in aerospace systems
[AGARD-AG-251] N82-11073
An overview of optimal control in aerospace systems N82-11074
AGING (MATERIALS)
Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165505] N82-11545
AGING (METALLURGY)
Effects of alloying on aging and hardening processes of steel with 20% nickel
[NASA-TM-76624] N82-11186
Irradiation-induced swelling in commercial alloys
[DE81-029755] N82-11191
AGRICULTURE
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549
AIR
High-voltage air-core pulse transformers
[DE81-030999] N82-11370
On electron beam ionization of air and chemical reactions for disturbed air deionization
[AD-A104517] N82-11871
AIR CONDITIONING
Energy analysis for a sample building by the proposed ASHRAE simplified method
[DE81-027169] N82-11323
AIR CONDITIONING EQUIPMENT
Light-commercial Brayton/Rankine space-conditioning system
[DE81-024137] N82-11586
AIR CONDUCTIVITY
Test results and analysis of a convective loop solar air collector
[DE81-028151] N82-11590
AIR FLOW
Analytical and experimental study of flow phenomena in noncavitating rocket pump inducers
[NASA-CR-3471] N82-11031
AIR INTAKES
Low speed testing of the inlets designed for a tandem-fan V/STOL nacelle — conducted in the Lewis 10 by 10 foot wind tunnel
[NASA-TM-82728] N82-11042
AIR NAVIGATION
The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739
AIR POLLUTION
Coal gasifier parameters influencing environmental pollutant production
[PB81-221301] N82-11273
An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224982] N82-11477
EPA evaluation of the Automotive Cylinder Deactivator System (ACDS) under Section 511 of the Motor Vehicle Information and Cost Saving Act
[PB81-228256] N82-11480
Mathematical modeling of photochemical air pollution N82-11629
Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637
Proof of concept study
[AD-A104336] N82-11639
Trace-element and phase relations in fly ash
[DE81-028555] N82-11643
Report of Lawrence Livermore National Laboratory to the Federal Aviation Agency on the high-altitude pollution program, 1980
[DE81-028264] N82-11647
Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222620] N82-11653
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 8: Controlled trading and site-specific SIP revisions: Competing for attention in a crowded administrative route
[PB81-218273] N82-11666
New Hampshire and Vermont point source inventory update for NECRMP
[PB81-219339] N82-11672
Evaluation of exhaust emissions data for diesel engines used in underround mines
[PB81-225377] N82-11673
Calculations from compliance emissions of long and short term SO2 concentrations in the southwest Pennsylvania air quality control region
[PB81-226076] N82-11676
Selected studies of four high-temperature air-pollution sources N82-11680
Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11689
Workbook for estimating the climatology of regional continental scale atmospheric dispersion and deposition over the United States
[PB81-224172] N82-11746
AIR QUALITY
Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635
Calculations from compliance emissions of long and short term SO2 concentrations in the southwest Pennsylvania air quality control region
[PB81-226076] N82-11676
AIR TRAFFIC CONTROL
FAA misses opportunities to discontinue or reduce operating hours of some airport traffic control towers
[PB81-224214] N82-11040
AIR WATER INTERACTIONS
Climate Diagnostics Workshop (5th) annual proceedings
[PB81-222200] N82-11735

Numerical studies of hurricane-ocean interactions
[PB81-225575] N82-11741

AIRCRAFT ANTENNAS
General aviation aircraft antennas for the global positioning system
[NASA-TM-83212] N82-11339

AIRCRAFT CONTROL
Control law design for transport aircraft flight tasks
N82-11080

AIRCRAFT DESIGN
Acta mechanica sinica
[AD-A105184] N82-11014
The principles and methods for shaping the wing root regions of a wing body combination at transonic and lower supersonic speeds N82-11016
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034
Design techniques for multivariable flight control systems N82-11078

AIRCRAFT ENGINES
A new method of cooling turbine vanes
N82-11027
Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11066
Development of multivariable controllers for aircraft turbine engines N82-11067
JT8D high pressure compressor performance improvement
[NASA-CR-165531] N82-11467
Integrated analysis of engine
[NASA-TM-82713] N82-11491

AIRCRAFT EQUIPMENT
Threat Alert and Collision Avoidance System (TCAS) Symposium
[AD-A104563] N82-11047
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212

AIRCRAFT FUEL SYSTEMS
Advanced fuel flowmeter for future naval aircraft
[AD-A104364] N82-11063
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165391] N82-11224

AIRCRAFT FUELS
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165391] N82-11224
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229

AIRCRAFT HAZARDS
Selected bibliography of NACA-NASA aircraft icing publications
[NASA-TM-81651] N82-11053
System safety program plan — electromagnetic pulse testing of the A-7E aircraft
[AD-A104557] N82-11364

AIRCRAFT NOISE
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071
Effects of aircraft noise on the equilibrium of airport residents: Testing and utilization of a new methodology
[NASA-TM-76626] N82-11636
Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11659

AIRCRAFT PILOTS
Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104684] N82-11781

AIRFOIL PROFILES
Wind-tunnel results for a modified 17-percent-thick low-speed airfoil section
[NASA-TP-1919] N82-11033
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

AIRFOILS
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104562] N82-11402

AIRFRAMES
Design techniques for multivariable flight control systems N82-11078

AIRGLOW
The use of DMSP digital data for auroral measurements
[AD-A104362] N82-11707

AIRLINE OPERATIONS
Optimum climb and descent trajectories for airline missions N82-11082

AIRPORT TOWERS
FAA misses opportunities to discontinue or reduce operating hours of some airport traffic control towers
[PB81-224214] N82-11049

AIRPORTS
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Effects of aircraft noise on the equilibrium of airport residents: Testing and utilization of a new methodology
[NASA-TM-76626] N82-11636

ALASKA
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532

ALBEDO
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164930] N82-12010
The opposition effect of particulate mineral surfaces and condensates: Applications to Saturn's rings
N82-12014

ALCOHOLS
Cattail rhizome-derived alcohol
[DE81-026307] N82-11234
Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030156] N82-11235
Alcohol fuels in the United States
[DE81-026013] N82-11265

ALGAE
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758

ALGEBRA
OBJ-1: A study in executable algebraic formal specification
[AD-A104466] N82-11803
Recursive aspects of the theory of real closed fields N82-11849

ALGORITHMS
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153
Digital SAR processing using a fast polynomial transform N82-11295
Removal of drift from frequency stability measurements N82-11298
Modulation/demodulation techniques for satellite communications. Part 4: Appendices
[NASA-CR-164864] N82-11341
SMMR data set development for GARP — impact of cross polarization and Faraday rotation on SMMR derived brightness temperatures
[NASA-CR-166721] N82-11512
Distributed computation of fixed points
[AD-A104418] N82-11791
Thermal algorithms analysis — programming tasks supporting the development of a thermal model of the Earth's surface
[NASA-CR-166716] N82-11800
Condition recognition for a program synthesizer
[AD-A104586] N82-11806
A second-order accurate procedure for solving the boundary layer equations based on the predictor-corrector form of the Crank-Nicolson Scheme
[NAL-TR-655] N82-11826
A two-step approach to finite element ordering
[AD-A104320] N82-11827

ALKALI METALS
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

Liquid and solid metal embrittlement
[AD-A103048] N82-11167

ALLOYS
Application of solidification theory to rapid solidification processing — alloys and metallic glasses
[AD-A104561] N82-11214
Experiments in high voltage electron microscopy — radiation damage in ceramics and alloys
[DE81-025574] N82-11375

ALLUVIUM
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532

ALTERNATING CURRENT
AC firing ability of detonation
[PB81-216053] N82-11272
Test results of ac superconducting cables
[BNL-29291] N82-11371

ALTIMETERS
The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

ALTITUDE
A simplified procedure for direct determination of real heights from virtual height data
[AD-A104374] N82-11702

ALUMINUM
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025483] N82-11193
Standard specification for light ladders
[SABS-1304-1980] N82-11277
Quasi-elastic high-pressure waves in 2024 Al and Cu
[DE81-025334] N82-11971

ALUMINUM ALLOYS
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161867] N82-11181
Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11189
Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199
Estimating the statistical properties of crack growth for small cracks
[AD-A104672] N82-11496
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11576

ALUMINUM COMPOUNDS
High-temperature enthalpy and X-ray powder diffraction data for aluminum sulfide (Al2S)
[PB81-226250] N82-11174
Evaluation of alpha aluminum phosphate for advanced acoustic wave devices
[AD-A104665] N82-11962

ALUMINUM NITRIDES
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220

ALUMINUM OXIDES
Castable high temperature fractory materials
[NASA-CASE-LEW-13060-2] N82-11210

ALUMINUM SILICATES
A structural study of aluminosilicate glasses by Raman spectroscopy N82-11136

AMORPHOUS MATERIALS
Liquid and solid metal embrittlement
[AD-A103048] N82-11167
Microstructure of amorphous and semi-crystalline polymers
[AD-A102653] N82-11216
National photovoltaic program in amorphous materials
[DE81-025906] N82-11609
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025186] N82-11886

ANAEROBES
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-[illegible]] N82-11246
ANALYSIS (MATHEMATICS)
Vector integrals and products of vector measures
N82-11847
ANALYSIS OF VARIANCE
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219810] N82-11734
Applications of non-parametric statistics and analysis of variance on sample variances
[NASA-CR-165789] N82-11834
ANALYTIC FUNCTIONS
Multilinear pseudodifferential operators and paraproducts N82-11825
Homeomorphisms of some direct limit spaces
N82-11848
ANECHOIC CHAMBERS
Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855
ANELASTICITY
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11198
ANGULAR DISTRIBUTION
The angular impact distribution of charged particles attracted to a charged cylindrical spacecraft
[AD-A104519] N82-11108
ANGULAR MOMENTUM
Variations in atmospheric angular momentum
[NASA-CR-166712] N82-11690
ANISOTROPIC PLATES
An improved transverse shear deformation theory for laminated anisotropic plates
[NASA-TP-1903] N82-11486
ANNEALING
Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165283] N82-11546
ANNUAL VARIATIONS
Data collection and processing for the ACES — annual cycle energy system demonstration house
[DE81-030830] N82-11555
OTEC environmental biological oceanographic program
[DE81-027402] N82-11645
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723
Oceans and ocean currents: Their influence on climate
[DE81-027283] N82-11731
ANTENNA ARRAYS
Virtual center arraying N82-11287
Cavity-backed, micro-strip dipole antenna array
[NASA-CASE-MSC-18808-1] N82-11336
Study of microstrip antenna elements, arrays, feeds, losses, and applications
[AD-A104483] N82-11343
ANTENNA COUPLERS
Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029815] N82-11933
ANTENNA DESIGN
Design of throat section of conical corrugated horns N82-11292
General aviation aircraft antennas for the global positioning system
[NASA-TM-83212] N82-11339
ANTENNA FEEDS
Study of microstrip antenna elements, arrays, feeds, losses, and applications
[AD-A104483] N82-11343
ANTENNA RADIATION PATTERNS
Antenna pattern modification for single reflector antennas — smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11338
ANTIFRICTION BEARINGS
Magnetic bearings
[DE81-004801] N82-11473
ANTIICING ADDITIVES
Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system — Lewis icing research tunnel
[NASA-CR-164966] N82-11052
ANTIMISTING FUELS
An assessment of the use of antimisting fuel in turbofan engines
[NASA-CR-165258] N82-11230
ANTIMONY
Analysis of standard reference materials by absolute INAA
[DE81-025925] N82-11900
ANTIREFLECTION COATINGS
Antireflecting film development — for resisting damage from laser pulses
[DE81-030010] N82-11915
APERTURES
Microstructures for high-energy X-ray and particle-imaging applications
[DE81-029531] N82-11899
APPROXIMATION
Numerical differentiation of noisy data
[AD-A104831] N82-11831
Projected Newton methods and optimization of multicommodity flows
[AD-A104419] N82-11844
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017
AQUEOUS SOLUTIONS
Adsorption of mixed liquids and solids from water solution onto activated carbon N82-11141
AQUIFERS
Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Floridan aquifer
[PB81-225518] N82-11529
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532
Geology and hydrology for environmental planning in Marquette County, Michigan
[PB81-221467] N82-11534
ARC MELTING
The quantitative determination of non-metallic inclusions by a mathematical statistical method
[RAE-LIB-TRANS-2086] N82-11179
ARCHAEOLOGY
Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164931] N82-11514
ARCHITECTURE
MASEC SOLAR 80 home designs
[DE81-028144] N82-11316
Site And Neighborhood Design (SAND): Development of simplified automated building thermal load procedures, phase 1
[DE81-027136] N82-11317
Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-028783] N82-11320
User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325
Racking tests of non-structural building partitions (The behavior of architectural (nonstructural) building components during earthquakes)
[PB81-220780] N82-11328
Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-028174] N82-11560
Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-028175] N82-11561
ARCHITECTURE (COMPUTERS)
Design methodology and development history of an ISO OSI layered architecture for the Canadian Broadcast Telidon system
[CRC-TN-708-E] N82-11337
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787
Multiple-instruction, multiple-data path computers: Parallel processing impact on flight simulation software
[AD-A104536] N82-11789
Computer performance prediction of a data flow architecture
[AD-A104587] N82-11792
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-028847] N82-11795
ARGON PLASMA
Ionization fluctuations in collisional ionizing shock waves — plasma interactions N82-11884
Temperature measurement in turbulent arcs
N82-11921
ARROW WINGS
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013
ARTIFICIAL HARBORS
Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11880
ARTIFICIAL INTELLIGENCE
Mechanical transformation of task heuristics into operational procedures
[AD-A104674] N82-11802
Condition recognition for a program synthesizer
[AD-A104586] N82-11808
ASHES
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
Trace-element and phase relations in fly ash
[DE81-028555] N82-11843
ASPHALT
SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-803377] N82-11615
ASSURANCE
The quality assurance role in the Deep Space Network N82-11302
ASTRONAUT TRAINING
Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097
ASYMMETRY
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036
ASYMPTOTIC SERIES
Estimation problems associated with the Weibull distribution
[DE81-030466] N82-11841
ATLANTIC OCEAN
Some analysis on the diurnal variation of rainfall over the Atlantic Ocean
[NASA-CR-164937] N82-11724
Comparison of ocean and island rainfall in the tropical South Pacific, Atlantic, and Indian Oceans
[PB81-225401] N82-11745
ATMOSPHERIC ATTENUATION
Plasmaspheric, faraday and total electron contents, 1977 and 1978
[AD-A104362] N82-11700
ATMOSPHERIC CHEMISTRY
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637
Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11648
Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11689
ATMOSPHERIC CIRCULATION
Variations in atmospheric angular momentum
[NASA-CR-166712] N82-11690
A numerical dynamical investigation of the role of subsynoptic inertial an isallobaric adjustments in organizing severe local storm ensembles
N82-11719
The wind climatology of American Samoa
[PB81-221012] N82-11733
Climate Diagnostics Workshop (5th) annual proceedings
[PB81-222200] N82-11735
ATMOSPHERIC COMPOSITION
Report of Lawrence Livermore National Laboratory to the Federal Aviation Agency on the high-altitude pollution program, 1980
[DE81-028264] N82-11647
Selected studies of four high-temperature air-pollution sources N82-11660
Far-infrared measurements of trace gases
[NASA-CR-164895] N82-11698
ATMOSPHERIC DENSITY
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11688

ATMOSPHERIC DIFFUSION
Mathematical modeling of photochemical air pollution N82-11629
Workbook for estimating the climatology of regional continental scale atmospheric dispersion and deposition over the United States
[PB81-224172] N82-11748

ATMOSPHERIC HEAT BUDGET
Radiation balances and the solar constant
[NASA-TM-76612] N82-12016

ATMOSPHERIC HEATING
Meridional heat transport at the onset of winter stratospheric warming
[NASA-TM-76614] N82-11697

ATMOSPHERIC IONIZATION
On electron beam ionization of air and chemical reactions for disturbed air deionization
[AD-A104517] N82-11871

ATMOSPHERIC MODELS
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11688

ATMOSPHERIC OPTICS
Data base specifications for the OPAQUE program
[AD-A104340] N82-11709

ATMOSPHERIC PHYSICS
National Center for Atmospheric Research
[NCAR/AR-80] N82-11692
Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104364] N82-11703
Report on research at AFGL
[AD-A104513] N82-11704

ATMOSPHERIC RADIATION
Data base specifications for the OPAQUE program
[AD-A104340] N82-11709

ATMOSPHERIC REFRACTION
A model of temperature stratification for correction of leveling refraction
[PB81-225435] N82-11744

ATMOSPHERIC TURBULENCE
Wind ripple analysis
[DE81-030129] N82-11044

ATOMIC COLLISIONS
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025186] N82-11886
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

ATOMIC PHYSICS
Bragg curve spectroscopy
[DE81-025827] N82-11161
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-023507] N82-11874

ATOMIC STRUCTURE
Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180

ATS 5
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101

AURORAS
Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699
High latitude electron detectors on Satellite P78-1: Preliminary data results
[AD-A104518] N82-11701
Application of visible monochromatic auroral imaging data for modeling infrared Earth-limb morphology
[AD-A104343] N82-11706
The use of DMSP digital data for auroral measurements
[AD-A104362] N82-11707
Two variable modelling of equatorward boundary of auroral precipitation
[AD-A104378] N82-11708

AUSTENITE
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12280] N82-11195

AUTOMATIC CONTROL
Application of nonlinear systems inverses to automatic flight control design: System concepts and flight evaluations N82-11083
Concept for a power system controller for large space electrical power systems
[NASA-TP-1939] N82-11109
Automation of electron diffraction analysis in an analytical electron microscope
[DE81-027255] N82-11159
Travelling-wave maser, closed cycle refrigerator automation N82-11294
Digital control of machine tools
[DE81-029950] N82-11476

AUTOMATIC FLIGHT CONTROL
Optimal control in the lunar module digital autopilot N82-11085

AUTOMATIC PILOTS
Optimal control in the lunar module digital autopilot N82-11085

AUTOMATION
Condition recognition for a program synthesizer
[AD-A104586] N82-11806

AUTOMOBILE ENGINES
An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224982] N82-11477
EPA evaluation of the FUEL-MAX device under Section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-229666] N82-11479
EPA evaluation of the Automotive Cylinder Deactivator System (ACDS) under Section 511 of the Motor Vehicle Information and Cost Saving Act
[PB81-228256] N82-11480
Jet impingement heat transfer enhancement for the GPU-3 Stirling engine
[NASA-TM-82727] N82-11993
Assessment of flywheel system benefits in selected vehicle applications
[DE81-025976] N82-11997

AUTOMOBILE FUELS
Alcohol fuels in the United States
[DE81-026013] N82-11265
Third automotive fuel economy research contractors coordination meeting
[PB81-222754] N82-11627
Liquid-liquid chromatography fractionation of organic compounds in complex mixtures: Application to automobile exhaust
[DE81-030743] N82-11650

AUTOREGRESSIVE PROCESSES
Properties of batch means from stationary ARMA (1, 1) time series
[AD-A104245] N82-11839

AUXILIARY POWER SOURCES
The use of remote active deflectors for feeding UHF relay stations
[BBC-RD-1981/5] N82-11334
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549

AUXILIARY PROPULSION
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems. Volume 1: Executive summary
[NASA-CR-165502-VOL-1] N82-11110
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems, volume 2
[NASA-CR-165502-VOL-2] N82-11111

AVIONICS
Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11064

B

B STARS
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12005

BACKSCATTERING
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025186] N82-11886
The deconvolution of aerosol backscattered optical pulses to obtain system-independent aerosol signatures
[AD-A104576] N82-11914

BACTERIA
Biologically assisted photoelectrochemical cell
[DE81-025805] N82-11807

BALL BEARINGS
Quiet bearing surface characterization
[AD-A104412] N82-11472

BALLOON-BORNE INSTRUMENTS
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11436

BANDPASS FILTERS
Cryogenic filters for RFI protection N82-11293

BANDWIDTH
Closed form evaluation of symmetric two-sided complex integrals N82-11299
Research on narrowband communications
[AD-A104296] N82-11345

BAROCLINIC WAVES
Frontogenesis in the planetary boundary layer of an amplifying, two-dimensional baroclinic wave N82-11721

BAROCLINITY
An inverse technique for determination of mean ocean circulation N82-11756

BATCH PROCESSING
Properties of batch means from stationary ARMA (1, 1) time series
[AD-A104245] N82-11839

BAYES THEOREM
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11840

BAYS (TOPOGRAPHIC FEATURES)
A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669

BEACHES
A method for using aerial photos in delineating historic patterns of beach accretion and retreat
[PB81-223636] N82-11536

BEAM INJECTION
Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11866
Storage ring injection
[DE81-023646] N82-11901

BEAM INTERACTIONS
Nonlinear waves on charged particle beams N82-11865

BEAM WAVEGUIDES
Non-solar power tests at the Central Receiver Test Facility (CRTF)
[DE81-026955] N82-11804

BEAMS (SUPPORTS)
Seismic resistance characteristics of reinforced concrete beam-supported floor slabs in building structures: Contribution of floor systems to earthquake resistance of building structural frames
[PB81-219172] N82-11326

BEARINGS
Rehabilitation of 64-meter-antenna radial bearing N82-11301

BEDROCK
Bearing capacity and characterization of compressible Clayey and Silty Foundation soils in Oklahoma
[PB81-231607] N82-11330

BENDING
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11206

BERING SEA
Ice conditions in the eastern Bering Sea from NOAA and LANDSAT imagery: Winter conditions 1974, 1976, 1977, 1979
[PB81-220166] N82-11537

BERNOULLI THEOREM
Recent advances in statistical methods for system reliability using Bernoulli sampling of components
[AD-A104436] N82-11462

BERYLLIUM
Shock compression of beryllium
[DE81-024062] N82-11200
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

BERYLLIUM 10
A review and interpretation of recent cosmic ray beryllium isotope measurements
[NASA-CR-164967] N82-12020

BESSEL FUNCTIONS
Special functions and harmonic analysis on P sub n N82-11824
BETA PARTICLES
Heavy ion fusion program at Argonne
[DE81-023606] N82-11902
BIAS
Estimation of radar range biases at multiple sites
[AD-A104306] N82-11346
BIBLIOGRAPHIES
Selected bibliography of NACA-NASA aircraft icing publications
[NASA-TM-81651] N82-11053
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093
A compilation of thermodynamic and transport properties of aqueous sulfuric acid
[PB81-229171] N82-11172
NASA Patent Abstracts bibliography: A continuing bibliography, section 1, abstracts. Supplement 19
[NASA-SP-7039(19)-SEC-1] N82-11981
NASA Patent Abstracts Bibliography: A continuing bibliography, section 2, indexes. Supplement 19
[NASA-SP-7039(19)-SEC-2] N82-11982
BINARY ALLOYS
Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11169
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199
BINARY STARS
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006
BINDERS (MATERIALS)
Modified-sulfur cements for use in concretes, flexible pavings, coatings, and grouts
[PB81-226870] N82-11333
BINDING
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183
BIOCONVERSION
Cattail rhizome-derived alcohol
[DE81-028307] N82-11234
Peat biogasification development program
[DE81-028299] N82-11243
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029958] N82-11246
BIODEGRADABILITY
Stabilization characteristics of deposits of biologic solids generated in aerated lagoons
[PB81-224297] N82-11668
BIOINSTRUMENTATION
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770
BIOMASS ENERGY PRODUCTION
Cattail rhizome-derived alcohol
[DE81-028307] N82-11234
Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030158] N82-11235
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socio-economic impacts — ethyl alcohol production
[DE81-029987] N82-11245
Transportation fuels from synthetic gas
[DE81-028514] N82-11258
Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274
Thermal and electrochemical biomass conversion at SERI
[DE81-030507] N82-11563
Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309] N82-11657
BIOMEDICAL DATA
Remote Medical Diagnosis System RMDS design review meeting minutes
[AD-A104686] N82-11772
BIOSYNTHESIS
Peat biogasification development program
[DE81-028299] N82-11243
Hydrogen production from the photosynthetic bacterium Rhodopseudomonas sphaeroides
[DE81-025631] N82-11256
Biologically assisted photoelectrochemical cell
[DE81-025606] N82-11607
BIPOLARITY
R&D services to develop an improved isolation technology radiation hardened bipolar integrated circuits (PEDIC)
[AD-A104657] N82-11367
BLANKETS (FUSION REACTORS)
Source-to-incident-flux relation in a Tokamak blanket module
[DE81-026524] N82-11941
BLAST LOADS
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104622] N82-11136
Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027559] N82-11504
BLOOD CIRCULATION
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766
BLOOD FLOW
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770
BLOOD PRESSURE
Effects of curative treatment emphasizing endurance training on the performance and blood pressure of hypertensive and normotensives
[NASA-TM-76520] N82-11771
BLUFF BODIES
A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-8109] N82-11037
BODIES OF REVOLUTION
Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-8110] N82-11038
BODY CENTERED CUBIC LATTICES
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973
BODY-WING CONFIGURATIONS
Acta mechanica sinica
[AD-A105184] N82-11014
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016
BOEING 747 AIRCRAFT
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860
BOILERS
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226813] N82-11625
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
Magnetohydrodynamic research program of the MHD Energy center at Mississippi State University and structural features of MHD radiant boilers
[DE81-029901] N82-11934
BOMBS (ORDNANCE)
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797
BONDING
Manganese glass-molybdenum metallized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11216
BONES
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773
BORIDES
Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185
BORON ALLOYS
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027234] N82-11557
BOROSILICATE GLASS
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890
Evaluation and review of alternative waste forms for immobilization of high-level radioactive wastes
[DE81-026323] N82-11909
BOUNDARY LAYER CONTROL
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction
[NASA-TP-1902] N82-11391
BOUNDARY LAYER EQUATIONS
A second-order accurate procedure for solving the boundary layer equations based on the predictor-corrector form of the Crank-Nicolson Scheme
[NAL-TR-655] N82-11826
BOUNDARY LAYER FLOW
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104582] N82-11402
BOUNDARY LAYER SEPARATION
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
Prediction of turbulent boundary layer separation N82-11022
A summary of V/STOL inlet analysis methods
[NASA-TM-82725] N82-11043
BOUNDARY LAYERS
Aircraft wing trailing-edge noise
[NASA-CR-164952] N82-11039
BOUNDARY VALUE PROBLEMS
Electromagnetic scattering by targets over a real Earth
[AD-A104492] N82-11347
Development of prediction method for transonic shock induced separated flow
[AD-A104586] N82-11403
A second-order accurate procedure for solving the boundary layer equations based on the predictor-corrector form of the Crank-Nicolson Scheme
[NAL-TR-655] N82-11826
Boundary observability and controllability for diffusion equations
[AD-A104293] N82-11829
BRAGG CURVE
Bragg curve spectroscopy
[DE81-025627] N82-11161
BRAKES (FOR ARRESTING MOTION)
Standard specification for air-brake reservoirs
[SABS-1312-1980] N82-11464
BRAYTON CYCLE
Light-commercial Brayton/Rankine space-conditioning system
[DE81-024137] N82-11586
BRAZIL
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
BREATHING APPARATUS
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783
BRIDGES (STRUCTURES)
Jointless bridges
[PB81-227736] N82-11332
BRIGHTNESS TEMPERATURE
Antenna pattern modification for single reflector antennas — smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11338
SMMR data set development for GARP — impact of cross polarization and Faraday rotation on SMMR derived brightness temperatures
[NASA-CR-166721] N82-11512
BRINES
Analysis of saturated solar pond characteristics, volume 1
[DE81-030620] N82-11618

Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671

BROADBAND
Wideband optical measurements of ultrasonic pulses N82-11132
Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133

BROMIDES
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11679

BUBBLES
Acoustic cavitation studies
[AD-A104409] N82-11663
Light scattering by bubbles in liquids or in glass
[AD-A104241] N82-11912

BUFFERS (CHEMISTRY)
Static continuous electrophoresis device
[NASA-CASE-MFS-25306-1] N82-11147

BURNING RATE
The effects of gaseous atmospheres on the performance characteristics of aluminum-sodium nitrate flares
[AD-A104383] N82-11227

C

CADMIUM
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025678] N82-11194

CADMIUM SULFIDES
Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553

CALCIUM
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199

CALCIUM FLUORIDES
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11578

CALCIUM METABOLISM
Human lymphocyte calcium metabolism
N82-11789

CALCULUS
Elements of programming linguistics. Part 1: The lambda calculus and its implementation
[AD-A104346] N82-11805
Programming with a relational calculus
[AD-A104650] N82-11809

CALIBRATING
Low-cost solar array project: Four absolute cavity radiometer (pyrheliometer) intercomparisons at New River, Arizona: Radiometer standards
[NASA-CR-164850] N82-11435
Calibration of a laminar flowmeter: The data and correlations
[DE81-025227] N82-11441
Calibration of a laminar flowmeter
[DE81-024423] N82-11442
Guide to the evaluation and use of an atomic absorption spectrophotometer
[PB81-222663] N82-11444
Engineering Analysis System (EASY)
[DE81-027506] N82-11646

CALIFORNIA
The planning and management of California's coastal resources
[PB81-224057] N82-11670

CALLISTO
The morphology and evolution of Ganymede and Callisto N82-12013

CAPACITORS
Elastomer unistructure insulators
[DE81-024366] N82-11219
Performance of a 100-kV, 78kJ electric-gun system
[DE81-025803] N82-11374
High energy density capacitor testing for the AFWL SHIVA
[DE81-023668] N82-11379
Advanced development of electrical-energy-storage components for high reliability applications
[DE81-025384] N82-11591

CARBON
Beach foreshore sedimentation by organic and inorganic processes N82-11630

CARBON DIOXIDE LASERS
Submicron-particle absorption spectroscopy by photothermal modulation of MIE scattered light
[DE81-025096] N82-11160
Mass spectrometry of the CO2 laser plasma
[AD-A104344] N82-11454
Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456

CARBON FIBER REINFORCED PLASTICS
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11205

CARBON FIBERS
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11760

CARBON MONOXIDE
Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260
Observations of molecular clouds containing reflection nebulae N82-11999

CARBONACEOUS MATERIALS
Transport characteristics of alternate slurry fuels
[DE81-028580] N82-11255
Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523

CARBONATES
A review of the behaviour and engineering properties of carbonate soils
[PB81-226722] N82-11331

CARBURETORS
Evaluation of the micro-carburetor
[NASA-CR-164956] N82-11994

CARDIOLOGY
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11786

CASCADE FLOW
Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023
Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024
Calculations of transonic potential flow over cascades
[NASA-CR-165471] N82-11041
Subsonic cascade wind tunnel tests using a compressor configuration of DCA blades
[AD-A104597] N82-11069

CASPIAN SEA
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029951] N82-11516

CASSEGRAIN ANTENNAS
Surface resistivity measurements of candidate subreflector surfaces N82-11300

CASTINGS
Castable high temperature fractory materials
[NASA-CASE-LEW-13060-2] N82-11210

CATALYSIS
Transportation fuels from synthetic gas
[DE81-029614] N82-11258
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260

CATALYSTS
Assessment of advanced coal gasification processes
[NASA-CR-164949] N82-11146
Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11166
An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224682] N82-11477

CATALYTIC ACTIVITY
Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027582] N82-11236

CATASTROPHE THEORY
Is geothermal simulation a catastrophe?
[DE81-026750] N82-11588

CATHODES
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 1 — underground transmission lines
[DE81-804195] N82-11382
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-804210] N82-11383

CATIONS
Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11648

CAUCHY PROBLEM
Linear evolution equations of hyperbolic type in a locally convex space N82-11850

CAUSES
Prediction, diagnosis, and causal thinking in forecasting
[AD-A104372] N82-11843

CAVITATION FLOW
Acoustic cavitation studies
[AD-A104409] N82-11663

CAVITIES
Cavity-backed, micro-strip dipole antenna array
[NASA-CASE-MSC-18806-1] N82-11336

CELL ANODES
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11578

CELL DIVISION
Molecular events basic to cellular radiation response
[DE81-027898] N82-11776

CEMENTS
Modified-sulfur cements for use in concretes, flexible pavings, coatings, and grouts
[PB81-226670] N82-11333

CENTRAL AMERICA
Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164931] N82-11514

CENTRAL PROCESSING UNITS
Concept for a power system controller for large space electrical power systems
[NASA-TP-1939] N82-11109

CENTRIFUGAL COMPRESSORS
Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429

CENTRIFUGAL PUMPS
Liquid oxygen turbopump technology
[NASA-CR-165487] N82-11466

CERAMICS
Castable high temperature fractory materials
[NASA-CASE-LEW-13060-2] N82-11210
Manganese glass-molybdenum metalized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11218
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220
Innovative technology for fabrication of ceramics: EDS rapid solidification process application to specialized materials
[PB81-214886] N82-11222
Experiments in high voltage electron microscopy — radiation damage in ceramics and alloys
[DE81-025574] N82-11375

CESIUM 137
Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027097] N82-11895

CHANNEL CAPACITY
RFI channels, 2 N82-11290
The R sub 0 parameter for the Gaussian channel
N82-11291

CHANNELS (DATA TRANSMISSION)
RFI channels, 2 N82-11290
The R sub 0 parameter for the Gaussian channel
N82-11291
Multiaccess of a slotted channel by finitely many users
[AD-A104417] N82-11349

CHARACTERIZATION
Quiet bearing surface characterization
[AD-A104412] N82-11472

CHARGE COUPLED DEVICES
Binary/analog CCD correlator development
[AD-A104438] N82-11363

CHARGE DISTRIBUTION
Investigation of the zinc electrode reaction — nickel zinc batteries
[DE81-030221] N82-11366

CHARGE EXCHANGE
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

CHARGE TRANSFER
An electrostatic model for energies of molecules in solution N82-11869

CHARGED PARTICLES
The angular impact distribution of charged particles attracted to a charged cylindrical spacecraft
[AD-A104519] N82-11108
Nonlinear waves on charged particle beams
N82-11665
A model of the normal and null states of pulsars
[PB81-215907] N82-12011

CHEBYSHEV APPROXIMATION
Chebyshev polynomial approximation in the OPAQUE program
[AD-A104317] N82-11636

CHELATES
The use of lanthanide chelates as selective complexing sorbents for gas chromatography
N82-11139
High-pressure optical studies
[DE81-025577] N82-11918

CHEMICAL ANALYSIS
Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-028961] N82-11167
Manual of analytical quality control for pesticides and related compounds in human and environmental samples
[PB81-222721] N82-11171
Informational report on the measurement and characterization of diesel exhaust emissions
[PB81-221251] N82-11175
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176
Energy dispersive X-ray spectrometry: Proceedings of a Workshop on Energy Dispersive X-Ray Spectrometry
[PB81-226334] N82-11177
Survey of particulate emission macro- and micro-sampling and sizing methods
[DE81-026348] N82-11642
Molecular-beam system for the study of transient combustion processes
[DE81-030863] N82-11872

CHEMICAL COMPOSITION
Effects of components of synfuels on soot formation
[DE81-027981] N82-11242

CHEMICAL EQUILIBRIUM
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11158

CHEMICAL EXPLOSIONS
Deflagration-to-Detonation Transition (DDT) project
[DE81-030979] N82-11241
Preventing large-battery explosions
[PB81-227373] N82-11628

CHEMICAL PROPERTIES
Physical characterization of electronic materials
[AD-A104494] N82-11135
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 1, phase 2
[AD-A104552] N82-11484
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 2, phase 2
[AD-A104553] N82-11485
Altered tissue reactivity and interactions between chemicals
[DE81-023169] N82-11777

CHEMICAL PROPULSION
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems. Volume 1: Executive summary
[NASA-CR-165502-VOL-1] N82-11110
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems, volume 2
[NASA-CR-165502-VOL-2] N82-11111

CHEMICAL REACTIONS
Shock-induced organic chemistry
[DE81-024442] N82-11115
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030492] N82-11165
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176
Chemical heat pump program: An overview
[DE81-025086] N82-11414
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
Altered tissue reactivity and interactions between chemicals
[DE81-023169] N82-11777

CHEMICAL REACTORS
Fluidized bed coal combustion reactor
[NASA-CASE-NPO-14273-1] N82-11144
Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11168
Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-026600] N82-11247
Solvent-Refined-Coal (SRC) process
[DE81-029629] N82-11268
Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-029071] N82-11641

CHEMISORPTION
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150
Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11196
Trapping and surface permeation of deuterium in Fe, Ni and stainless steel: An ion-beam study
[DE81-023303] N82-11201

CHIPS (ELECTRONICS)
Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365

CHIRP SIGNALS
Binary/analog CCD correlator development
[AD-A104438] N82-11363

CHLORINATION
Coal desulfurization by low temperature chlorinolysis, phase 3
[NASA-CR-164957] N82-11145

CHLOROPHYLLS
Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511

CHROMIUM
Analysis of standard reference materials by absolute INAA
[DE81-025825] N82-11900

CHROMIUM STEELS
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11189

CHROMOSPHERE
Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003
Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164989] N82-12004

CIRCULAR CYLINDERS
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104
Surface-tension induced instabilities: Effects of lateral boundaries
[NASA-CR-165530] N82-11390

CLADDING
Zircaloy cladding: Tough containment for spent fuel storage
[DE81-024105] N82-11896

CLAMPS
Clamp-mount device
[NASA-CASE-MFS-25510-1] N82-11470

CLASSICAL MECHANICS
Classical field theory with Z(3) symmetry
[DE81-027089] N82-11969

CLASSIFICATIONS
A review of the behaviour and engineering properties of carbonate soils
[PB81-226722] N82-11331

CLASSIFIERS
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787

CLAYS
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

CLEANING
Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190

CLIMATE
Oceans and ocean currents: Their influence on climate
[DE81-027263] N82-11731
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219610] N82-11734
Climate Diagnostics Workshop (5th) annual proceedings
[PB81-222200] N82-11735
Hawaii mesoscale energy and climate project (HAMEC). 2: P-3 aircraft data sets
[PB81-224198] N82-11747

CLIMATOLOGY
The wind climatology of American Samoa
[PB81-221012] N82-11733
Workbook for estimating the climatology of regional continental scale atmospheric dispersion and deposition over the United States
[PB81-224172] N82-11748

CLINICAL MEDICINE
Integrating medical knowledge and clinical data banks: Discovery and representation of causal relationships from a large time-oriented clinical database. The RX project
[PB81-227233] N82-11987

CLOUD COVER
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11688
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723
Estimates for the probabilities of surface-to-air cloud-free lines-of-sight and low cloud statistics from ship observations. Part 1: Fifteen marine locations
[AD-A104633] N82-11730
An analysis of cloud property retrieval using infrared sounder data
[PB81-221608] N82-11732

Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164830] N82-12010

CLOUD PHYSICS

Numerical simulation of the dynamics, cloud microphysics and radar echo structures of tropical and mid-latitude convection N82-11722

An analysis of cloud property retrieval using infrared sounder data
[PB81-221606] N82-11732

CMOS

Modeling and elimination of latch-up in bulk CMOS integrated circuits
[DE81-017413] N82-11377

COAL

Coal desulfurization by low temperature chlorinolysis, phase 3
[NASA-CR-164957] N82-11145

Computational tools for pulverized-coal combustion
[DE81-025682] N82-11148

Studies for the stabilization of coal-oil mixtures
[DOE/ET-10746/T1] N82-11156

One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027022] N82-11158

Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239

Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240

Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248

Preignition volatile yield as related to coal characteristics
[DE81-027564] N82-11250

Transport characteristics of alternate slurry fuels
[DE81-026560] N82-11255

Gas recovery from coal deposits
[PB81-222291] N82-11271

Coal gasifier parameters influencing environmental pollutant production
[PB81-221301] N82-11273

Geologic considerations in underground coal mining system design
[NASA-CR-164961] N82-11516

Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-028490] N82-11519

Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523

Energy analysis of human ecosystems in an Appalachian coal county
[DE81-025177] N82-11574

Development, testing, and evaluation of MHD materials and component designs. Volume 1: Executive summary
[DE81-026203] N82-11947

COAL DERIVED GASES

Feasibility and economic study of medium-BTU coal gas blended with high-BTU by product gas as an industrial energy source at Billings, Montana
[DE81-025166] N82-11237

Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240

Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-026600] N82-11247

COAL DERIVED LIQUIDS

Effects of components of synfuels on soot formation
[DE81-027981] N82-11242

Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-026503] N82-11644

COAL GASIFICATION

Assessment of advanced coal gasification processes
[NASA-CR-164949] N82-11146

Materials technology for coal-conversion processes
[DE81-028474] N82-11169

Alternative fuel for the steel industry of Northern Indiana: A prefeasibility study of a central coal gasification project
[DE81-026314] N82-11233

Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11238

Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240

Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-026600] N82-11247

Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248

Surface coal gasification
[DE81-030163] N82-11253

Advanced-gasification processes
[DE81-030164] N82-11254

LLNL underground coal gasification project
[DE81-030634] N82-11267

Coal gasifier parameters influencing environmental pollutant production
[PB81-221301] N82-11273

Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025626] N82-11474

Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524

Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525

Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11651

Vapor-phase cracking and wet oxidation as potential pollutant control techniques for coal gasification
[PB81-219594] N82-11661

Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712

COAL LIQUEFACTION

Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030492] N82-11165

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-025961] N82-11167

Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11168

Materials technology for coal-conversion processes
[DE81-028474] N82-11169

Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027562] N82-11236

Solvent-Refined Coal-1 Demonstration Project. Final environmental impact statement, Volume 1 of 2 — coal liquefaction plant at Newman, Kentucky
[DE81-025963] N82-11252

Advanced-gasification processes
[DE81-030164] N82-11254

Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259

Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260

Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269

Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270

COAL UTILIZATION

Fluidized bed coal combustion reactor
[NASA-CASE-NPO-14273-1] N82-11144

Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030662] N82-11161

Possible use of coal in Hawaii, 1980 - 2000
[DE81-025266] N82-11263

Lewis Research Center's coal-fired, pressurized, fluidized-bed reactor test facility
[NASA-TM-81616] N82-11397

National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11986

COASTAL ECOLOGY

The planning and management of California's coastal resources
[PB81-224057] N82-11670

COASTAL ZONE COLOR SCANNER

Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511

COASTS

Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

COATINGS

Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553

COBALT

Application of a rare-earth cobalt magnet to synchronous motors
[NAL-TR-666] N82-11358

COBALT ALLOYS

Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180

Stability of permanent-magnet parameters
[DE81-027013] N82-11652

COBALT COMPOUNDS

Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185

COBOL

COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-226425] N82-11798

Perkin-Elmer COBOL R06 Perkin-Elmer model 3240 OS/32 REV 06.02
[PB81-223665] N82-11799

CODING

RFI channels, 2 N82-11290

COGENERATION

Preliminary evaluation of advanced coal-based electricity-generating technologies by means of system-integration analysis
[DE81-029969] N82-11573

Analysis of the fuel and cost effects of interfacing utilities and small-power cogenerators
[DE81-026495] N82-11579

COHERENT ACOUSTIC RADIATION

Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121

COHESION

Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183

COLD FRONTS

Evaluation of photogrammetric flight under icing conditions on March 23, 1978
[NASA-TM-76617] N82-11725

COLD WEATHER

Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412

COLLISION AVOIDANCE

Threat Alert and Collision Avoidance System (TCAS) Symposium
[AD-A104563] N82-11047

COLLISIONS

Side impact sled and padding development
[PB81-217952] N82-11092

COLOR PHOTOGRAPHY

Method for retarding dye fading during archival storage of developed color photographic film — inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432

COLORADO
Gas recovery from coal deposits
[PB81-222291] N82-11271
Waste-assimilation capacity of the Arkansas River in Pueblo County, Colorado, as it relates to water-quality guidelines and stream classification
[PB81-227340] N82-11640
Rainfall-runoff modeling and preliminary regional flood characteristics of small rural watersheds in the Arkansas river basin in Colorado
[PB81-224919] N82-11667
Geology of the nahcolite deposits and associated oil shales of the Green River Formation in the Piceance Creek Basin, Colorado N82-11683
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219810] N82-11734
COMBUSTION
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11158
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-028894] N82-11162
Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
Molecular-beam system for the study of transient combustion processes
[DE81-030669] N82-11672
COMBUSTION CHAMBERS
Fluidized bed coal combustion reactor
[NASA-CASE-NPO-14273-1] N82-11144
Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030252] N82-11151
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11158
Trends in high temperature gas turbine materials
[NASA-TM-82715] N82-11162
COMBUSTION CONTROL
Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248
COMBUSTION PHYSICS
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
An investigation of the combustion process in solid fuel ramjets
[AD-A104803] N82-11232
Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-026071] N82-11641
Development, testing, and evaluation of MHD materials and component designs. Volume 1: Executive summary
[DE81-026203] N82-11947
COMBUSTION PRODUCTS
Preignition volatile yield as related to coal characteristics
[DE81-027584] N82-11250
Survey of particulate emission macro- and micro-sampling and sizing methods
[DE81-026646] N82-11642
Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-026606] N82-11644
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
COMBUSTION STABILITY
Report of laser activities: 1978 - 1979
[DE81-026667] N82-11459
COMETARY ATMOSPHERES
Radiative transfer in cometary dust atmospheres: Critique of recent developments
[NASA-CR-164946] N82-12015
COMMERCIAL AIRCRAFT
Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11066
COMMERCIAL ENERGY
Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-026783] N82-11320
Interrelationships of energy and the economy: A supplement to the National Energy Policy Plan required by Title VIII of the US Department of Energy Organization Act (Public Law 95-91)
[DE81-027526] N82-11613
COMMUNICATION CABLES
Investigation of the strength of shielded and unshielded underwater electrical cables
[AD-A104314] N82-11364
COMMUNICATION EQUIPMENT
User's guide: Voice and data communications protection
[PB81-221609] N82-11356
COMMUNICATION NETWORKS
Design methodology and development history of an ISO OSI layered architecture for the Canadian Broadcast Telidon system
[CHC-TN-708-E] N82-11337
Microcomputer-controlled communication network for Sandia National Laboratories' environmental test chambers
[DE81-030966] N82-11365
COMMUNITIES
Modeling energy-conservation potentials of community energy-system technologies
[DE81-026059] N82-11589
COMPACTING
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220
COMPARISON
Correlation of shock-initiation tests for explosives and propellants
[DE81-026533] N82-11264
Instrument intercomparisons at the Boulder Atmospheric Observatory during 1980
[PB81-220139] N82-11740
Comparisons of some large scientific computers
[NASA-TM-81928] N82-11817
COMPILERS
COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-226425] N82-11798
Perkin-Elmer COBOL R08 Perkin-Elmer model 3240 OS/32 REV 06.02
[PB81-223665] N82-11799
COMPLEX COMPOUNDS
Development and optimization of methodologies for analysis of complex hydrocarbon mixtures
[DE81-025675] N82-11114
COMPONENT RELIABILITY
Standard specification for light ladders
[SABS-1304-1980] N82-11277
Heliostat operation at the central receiver test facility (1978 - 1980)
[DE81-031926] N82-11556
Advanced development of electrical-energy-storage components for high reliability applications
[DE81-025384] N82-11591
COMPOSITE MATERIALS
Novel improved PMR polyimides
[NASA-TM-82733] N82-11117
Physical characterization of electronic materials
[AD-A104494] N82-11135
Development of battery separator composites
[NASA-CR-165506] N82-11547
COMPOSITE STRUCTURES
Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system — Lewis icing research tunnel
[NASA-CR-164966] N82-11052
COMPOSITION (PROPERTY)
The isotopic composition of the elements carbon, oxygen, neon, magnesium and silicon in the galactic cosmic rays
[NASA-CR-166715] N82-12019
COMPRESSED AIR
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621
COMPRESSED GAS
Hydride chemical compressor, phase 1
[DE81-030199] N82-11155
One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-86967] N82-11940
COMPRESSIBILITY
Stress relaxation of cellular silicone material: 1981
[DE81-030662] N82-11137
COMPRESSIBILITY EFFECTS
Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024
COMPRESSIBLE FLOW
Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164953] N82-11396
COMPRESSING
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929
COMPRESSION LOADS
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11206
COMPRESSION TESTS
Shock compression of beryllium
[DE81-024062] N82-11200
COMPRESSION WAVES
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
Compression processes of free pistons after the opening of nozzle in a hypersonic gun tunnel
N82-11021
COMPRESSOR BLADES
Subsonic cascade wind tunnel tests using a compressor configuration of DCA blades
[AD-A104597] N82-11069
COMPRESSOR EFFICIENCY
Testing and optimizing active rotary flux compressors
[DE81-024376] N82-11378
JT8D high pressure compressor performance improvement
[NASA-CR-165531] N82-11467
COMPRESSORS
Hydride chemical compressor, phase 1
[DE81-030199] N82-11155
Testing and optimizing active rotary flux compressors
[DE81-024376] N82-11378
JT8D high pressure compressor performance improvement
[NASA-CR-165531] N82-11467
COMPUTATION
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
On the computation of barotropic tides in deep estuaries with application to Knight Inlet, British Columbia
[PB81-220147] N82-11754
Distributed computation of fixed points
[AD-A104416] N82-11791
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164930] N82-12010
COMPUTATIONAL FLUID DYNAMICS
Acta mechanica sinica
[AD-A105164] N82-11014
The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015
Computation of high Reynolds number internal/external flows
[NASA-TM-84049] N82-11046
Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395

A computer solution to the stationary Navier-Stokes equations in two dimensions with proven convergence
[NASA-TM-81200] N82-11398

COMPUTER COMPONENTS
The Crossfile Random Access Memory (CRAM). Part 1: The concept and initial studies
[AD-A104643] N82-11788

COMPUTER DESIGN
Philosophy of supercomputing
[DE81-028586] N82-11798
Comparisons of some large scientific computers
[NASA-TM-81928] N82-11817

COMPUTER GRAPHICS
Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104386] N82-11517
GRAMPS: A graphics language interpreter for real time, interactive, three dimensional picture editing and animation
[DE81-027386] N82-11811
Computer processing of periodic electron micrographs N82-11815
Methods for presentation and display of multivariate data
[NASA-CR-165786] N82-11833

COMPUTER INFORMATION SECURITY
User's guide: Voice and data communications protection
[PB81-221508] N82-11356

COMPUTER PROGRAM INTEGRITY
Analysis of 4&5 data — program evaluation
[AD-A104249] N82-11804

COMPUTER PROGRAMMING
Two-phase flow in geothermal energy sources
[DE81-029037] N82-11404
Philosophy of supercomputing
[DE81-028586] N82-11798
Thermal algorithms analysis — programming tasks supporting the development of a thermal model of the Earth's surface
[NASA-CR-166716] N82-11800
OBJ-1: A study in executable algebraic formal specification
[AD-A104488] N82-11803
The effects of the symbology and spatial arrangement of software specifications in a debugging task
[AD-A104541] N82-11806
Condition recognition for a program synthesizer
[AD-A104586] N82-11808
Programming with a relational calculus
[AD-A104650] N82-11809

COMPUTER PROGRAMS
Some observations on a new numerical method for solving Navier-Stokes equations
[NASA-TP-1934] N82-11032
Computation of high Reynolds number internal/external flows
[NASA-TM-84049] N82-11046
Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] N82-11103
Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-028694] N82-11162
Integrated analysis of engine
[NASA-TM-82713] N82-11491
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500
Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738
COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-226425] N82-11796
Perkin-Elmer COBOL R06 Perkin-Elmer model 3240 OS/32 REV 05.02
[PB81-226865] N82-11799
Analysis of 4&5 data — program evaluation
[AD-A104249] N82-11804
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-028573] N82-11810
RATFIT: A rational equation-of-state fitting program
[DE81-027273] N82-11812
H-O processor computer code
[DE81-028889] N82-11814
SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816
Digital ultrasonics signal processing: Flaw data post processing use and description
[NASA-CR-161862] N82-11862
Improved calculations of energy deposition from fast neutrons
[DE81-025385] N82-11885
KUGEL: A thermal, hydraulic, fuel performance and gaseous fission product release code for pebble bed reactor core analysis
[DE81-028581] N82-11904
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017

COMPUTER STORAGE DEVICES
Automatic multi-banking of memory for microprocessors
[NASA-CASE-NPO-15295-1] N82-11785
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029847] N82-11795

COMPUTER SYSTEMS DESIGN
Design and analysis of a multi-backend database system for performance improvement, functionality expansion and capacity growth, part 2
[AD-A104445] N82-11790
A microprocessor development system for the ALTOS series microcomputers
[AD-A104624] N82-11793
Some notes on operating-system principles
[DE81-030675] N82-11818

COMPUTER SYSTEMS PERFORMANCE
Computer performance prediction of a data flow architecture
[AD-A104587] N82-11792
A back-end data management experiment
[AD-A104579] N82-11794

COMPUTER SYSTEMS PROGRAMS
Fidelity optimization of microprocessor system simulations
[AD-A104679] N82-11786
Guide to the data-acquisition software of the Doublet III computer system
[DE81-028616] N82-11813

COMPUTER TECHNIQUES
Mechanical transformation of task heuristics into operational procedures
[AD-A104574] N82-11802
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-028573] N82-11810
Some notes on operating-system principles
[DE81-030675] N82-11818
Integrating medical knowledge and clinical data banks: Discovery and representation of causal relationships from a large time-oriented clinical database. The RX project
[PB81-227239] N82-11997

COMPUTERIZED DESIGN
Computer-aided heat-pump design and optimization
[DE81-024965] N82-11415
Research in nonlinear structural and solid mechanics
[NASA-CP-2147-SUPPL] N82-11489
Condition recognition for a program synthesizer
[AD-A104586] N82-11808
Analytical design for internal burning star grains of solid rockets N82-12025

COMPUTERIZED SIMULATION
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027822] N82-11158
Studies of heat transfer and water migration in soils
[DE81-023651] N82-11425
Computer modeling of an all-secondary explosive hot-wire device
[DE81-030436] N82-11439
Two-dimensional theory and simulation of free electron lasers
[DE81-025365] N82-11461
Solar heat pump simulator
[DE81-024366] N82-11563
Is geothermal simulation a catastrophe?
[DE81-026750] N82-11566
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11686
Fidelity optimization of microprocessor system simulations
[AD-A104679] N82-11786
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797
Second Image Generation/Display Conference: Closing comments — flight simulators
[AD-A104676] N82-11807
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11840
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-026640] N82-11973

COMPUTERS
Philosophy of supercomputing
[DE81-028586] N82-11798
Comparisons of some large scientific computers
[NASA-TM-81928] N82-11817

CONCENTRATION (COMPOSITION)
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025678] N82-11194

CONCENTRATORS
Secondary and compound concentrators for parabolic dish solar thermal power systems
[NASA-CR-164980] N82-11550
Non-solar power tests at the Central Receiver Test Facility (CRTF)
[DE81-026955] N82-11604

CONCENTRIC CYLINDERS
Magnetic bearings
[DE81-024201] N82-11473

CONCRETE STRUCTURES
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500

Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4706-88] N82-11501

CONCRETES
Evaluation of base courses for flexible pavements
[PB81-218872] N82-11329
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4706-88] N82-11501

CONDENSATES
Physics in few dimensions — condensed matter physics
[DE81-022054] N82-11853

CONFERENCES
Energy dispersive X-ray spectrometry: Proceedings of a Workshop on Energy Dispersive X-Ray Spectrometry
[PB81-226634] N82-11177
Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11261
Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-028807] N82-11674

CONFIDENCE
Evaluation of uncertainties in geologic information
[DE81-026667] N82-11714

CONFIDENCE LIMITS
Feasible objective confidence bounds for system reliability
[AD-A104280] N82-11483

CONGRESSIONAL REPORTS
Civil servants and contract employees: Who should do what for the Federal Government
[PB81-219969] N82-11979

CONSERVATION LAWS
Upwind difference schemes for hyperbolic systems of conservation laws N82-11820

CONSOLES
NOCA upgrade N82-11304

CONSTITUTIVE EQUATIONS
Constitutive modelling for the shock physicist
[DE81-024063] N82-11854

CONSTRAINTS
Constrained adaptive least mean squared filters
[AD-A104825] N82-11830

CONSTRUCTION
Environmental protection as an ongoing component of large facilities engineering projects N82-11833

CONTAMINANTS
Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76629] N82-11758
New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222982] N82-11778

CONTINENTAL SHELVES
Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-804014] N82-11520
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations N82-11685

CONTINUOUS WAVE LASERS
Development of MBE grown Pb-salt semiconductor lasers for the 8.0 to 15.0 micrometer spectral region
[NASA-CR-165583] N82-11453

CONTINUUM MECHANICS
Constitutive modelling for the shock physicist
[DE81-024063] N82-11854

CONTINUUMS
Formulas for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222646] N82-11506

CONTRACT MANAGEMENT
Civil servants and contract employees: Who should do what for the Federal Government
[PB81-219969] N82-11979

CONTROL
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11061
Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164871] N82-11099

CONTROL BOARDS
Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11085
NOCA upgrade N82-11304

CONTROL EQUIPMENT
Management of redundancy in flight control systems using optimal decision theory N82-11084
An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224962] N82-11477

CONTROL SURFACES
On the kernel function collocation method in steady subsonic flow for wing with control surfaces N82-12023

CONTROL THEORY
Theory and applications of optimal control in aerospace systems
[AGARD-AG-251] N82-11073
An introduction to stochastic optimal control theory N82-11076
Mathematical investigation of linear control systems containing input derivatives N82-11819
Partial differential equations from dynamic programming equations N82-11822
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104835] N82-11840

CONTROLLABILITY
Boundary observability and controllability for diffusion equations
[AD-A104293] N82-11829

CONTROLLED FUSION
Stimulated Raman scattering in large plasmas
[DE81-026589] N82-11936
Magnetic fusion energy program, volume 1
[SAI-254-80-656-LJ-VOL-1] N82-11955
Magnetic fusion energy program, volume 2
[SAI-254-80-656-LJ-VOL-2] N82-11956

CONTROLLERS
Development of multivariable controllers for aircraft turbine engines N82-11087
Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11380

CONVECTION
A self-consistent linear-mode analysis of a stellar convection zone N82-12008
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222895] N82-12018

CONVECTION CURRENTS
A numerical dynamical investigation of the role of subsynoptic inertial an isallobaric adjustments in organizing severe local storm ensembles N82-11719
Numerical simulation of the dynamics, cloud microphysics and radar echo structures of tropical and mid-latitude convection N82-11722

CONVECTIVE FLOW
Test results and analysis of a convective loop solar air collector
[DE81-026151] N82-11599
A self-consistent linear-mode analysis of a stellar convection zone N82-12008

CONVECTIVE HEAT TRANSFER
Investigation of heat transfer in straight and curved rectangular ducts for laminar and transition flows
[AD-A104804] N82-11401
Stefan problem with a convective boundary condition
[DE81-030424] N82-11410

CONVERGENCE
A computer solution to the stationary Navier-Stokes equations in two dimensions with proven convergence
[NASA-TM-81300] N82-11396

CONVERGENT-DIVERGENT NOZZLES
Acta Mechanica Sinica (selected articles)
[AD-A105868] N82-11019
On transonic flow in hyperbolic Laval nozzles — the conformal curvilinear coordinate method N82-11029
Wind tunnel supplementary Mach number minimum section insert
[NASA-CASE-LAR-12532-1] N82-11098

CONVEYORS
Static continuous electrophoresis device
[NASA-CASE-MFS-25306-1] N82-11147
Rehabilitation of 64-meter-antenna radial bearing N82-11301

COOLERS
Stirling cycle cryogenic cooler — magnetically suspended pistons
[NASA-CASE-GSC-12697-1] N82-11312

COOLING
Geothermal heat transfer, district heating and cooling
[DE81-023195] N82-11587
Performance testing of the TOLTEC TI-410 concentrating solar collector
[DE81-029994] N82-11617
Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164969] N82-12004

COOLING SYSTEMS
Energy analysis sample building data
[DE81-027188] N82-11316
Magma Cooling-Tower process pilot-plant demonstration
[DE81-803783] N82-11406
Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11418
Well-water-source heat pump field performance study
[DE81-024136] N82-11419
Meteorological Effects of Thermal Energy Releases (METER) program
[DE81-030431] N82-11640

COORDINATES
A two-step approach to finite element ordering
[AD-A104320] N82-11827

COPOLYMERS
Stress relaxation of cellular silicone material: 1981
[DE81-030692] N82-11137

COPPER
Quasi-elastic high-pressure waves in 2024 Al and Cu
[DE81-025334] N82-11971

COPPER ALLOYS
Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190

COPPER SELENIDES
Advanced selenide thermoelectric development program
[DE81-027823] N82-11582

COPPER SULFIDES
Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553

CORE SAMPLING
An inexpensive, portable vibracoring system for shallow-water and land application
[AD-A104323] N82-11314

CORES
New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11087

CORIOLIS EFFECT
Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104664] N82-11781

CORONAGRAPHS
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017

CORRELATION
Correlation methods
[DE81-025379] N82-11598

CORRELATORS
Binary/analog CCD correlator development
[AD-A104436] N82-11363

CORROSION
Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025493] N82-11193
CORROSION PREVENTION
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 1 — underground transmission lines
[DE81-804195] N82-11382
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-804210] N82-11383
CORROSION RESISTANCE
Materials technology for coal-conversion processes
[DE81-028474] N82-11169
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-804209] N82-11217
CORROSION TESTS
Materials considerations relative to multibarrier waste isolation
[DE81-029104] N82-11884
COSMIC RAYS
The isotopic composition of the elements carbon, oxygen, neon, magnesium and silicon in the galactic cosmic rays
[NASA-CR-166715] N82-12019
A review and interpretation of recent cosmic ray beryllium isotope measurements
[NASA-CR-164967] N82-12020
COSMOLOGY
The Bogoliubov transformation and its application to cosmological particle production N82-12009
COSMONAUTS
Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097
COST ANALYSIS
Parametric sensitivity study for solar-assisted heat-pump systems
[DE81-030309] N82-11407
Second generation heliostat, volume 1
[DE81-029818] N82-11564
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11640
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890
Civil servants and contract employees: Who should do what for the Federal Government
[PB81-219966] N82-11979
National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11988
COST EFFECTIVENESS
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091
COST ESTIMATES
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030982] N82-11565
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030986] N82-11567
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031821] N82-11568
Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569
COST REDUCTION
FAA misses opportunities to discontinue or reduce operating hours of some airport traffic control towers
[PB81-224214] N82-11049
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
COULOMB COLLISIONS
Role of excited states of molecular ions in structure studies with high-energy collisions
[DE81-023996] N82-11861
COUPLING
Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699
COWLINGS
Low speed testing of the inlets designed for a tandem-fan V/STOL nacelle — conducted in the Lewis 10 by 10 foot wind tunnel
[NASA-TM-82728] N82-11042
CRACK PROPAGATION
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161867] N82-11181
Fracture mechanics of cellular glass
[NASA-CR-164969] N82-11209
Strength behaviour of fatigue cracked lugs — stress intensity and crack propagation characteristics
[RAE-LIB-TRANS-2057] N82-11486
Estimating the statistical properties of crack growth for small cracks
[AD-A104672] N82-11496
Electrochemical conditions within stress corrosion cracks (experimental techniques)
[AD-A104248] N82-11497
CRACKING (FRACTURING)
Crack arrest properties of a 9 percent nickel cryogenic steels
[PB81-227993] N82-11202
Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2056] N82-11487
CRACKS
Eddy current flows around cracks in thin plates for nondestructive testing
[AD-A104407] N82-11481
CROSS FLOW
A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite element algorithm
[AD-A104514] N82-11055
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction
[NASA-TP-1902] N82-11391
CROSS POLARIZATION
SMMR data set development for GARP — impact of cross polarization and Faraday rotation on SMMR derived brightness temperatures
[NASA-CR-166721] N82-11512
CROSSED FIELD GUNS
Trajectory analysis of the electrons in a magnetron-type gun
[DE81-027660] N82-11905
CRUDE OIL
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029951] N82-11518
US energy strategies: Some options for eliminating oil imports by the year 2000
[PB81-226052] N82-11626
CRUSTAL FRACTURES
A review of an attempt to create shatter cones with magnetic flyer plate technology
[NASA-CR-164614] N82-11492
Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas — Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695
CRYOGENIC COOLING
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
Stirling cycle cryogenic cooler — magnetically suspended pistons
[NASA-CASE-GSC-12697-1] N82-11312
CRYOGENIC EQUIPMENT
Cryogenic filters for RFI protection N82-11293
Traveling-wave maser, closed cycle refrigerator automation N82-11294
Low temperature latching solenoid
[NASA-CASE-MSC-18108-1] N82-11357
CRYOGENIC WIND TUNNELS
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
CRYOGENICS
Crack arrest properties of a 9 percent nickel cryogenic steels
[PB81-227993] N82-11202
CRYSTAL DEFECTS
Hot-spot initiation of heterogeneous explosives
[DE81-027801] N82-11266
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
CRYSTAL DISLOCATIONS
Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960
CRYSTAL GROWTH
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025567] N82-11577
Growth of silicon sheets from metallurgical-grade silicon
[DE81-025703] N82-11605
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161891] N82-11958
CRYSTAL LATTICES
A structural study of aluminosilicate glasses by Raman spectroscopy N82-11138
Effects of ionizing radiation on the chemical structure, crystalline content and molecular weight distribution of various Teflon resins N82-11203
Theoretical and experimental studies of the electro-optic effect: Toward a microscopic understanding
[AD-A104363] N82-11961
Negative-U for point defects in silicon
[AD-A104482] N82-11966
CRYSTAL OSCILLATORS
Low temperature quartz crystal oscillator fast warm-up saw oscillator
[AD-A104403] N82-11368
CRYSTAL STRUCTURE
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204
Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957
CRYSTALLIZATION
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
Growth of silicon sheets from metallurgical-grade silicon
[DE81-025703] N82-11605
CRYSTALLOGRAPHY
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12269] N82-11195
CUFFS
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770
CURING
The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11208
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104656] N82-11213
CURRENT DENSITY
Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931
CURRENT REGULATORS
Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11360
CURRENT SHEETS
Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029815] N82-11933
CURVE FITTING
Modal analysis using a Fourier analyzer, curve-fitting, and modal tuning
[NASA-CR-161886] N82-11490

CUSHIONS
Stress relaxation of cellular silicone material: 1981
[DE81-[illegible]] N82-11137
CUSPS (MATHEMATICS)
Characters of rank two hyperbolic Lie algebras as functions of quasiregular cusps N82-11821
CYANAMIDES
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104[illegible]] N82-11213
CYCLONES
An assessment of detecting mesoscale rainfall from mid-latitude cyclones using GOES imagery data
[AD-A104377] N82-11726
CYCLOTRON RADIATION
Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-[illegible]] N82-11906
CYLINDRICAL BODIES
Surface-tension induced instabilities: Effects of lateral boundaries
[NASA-CR-165[illegible]] N82-11360
Magnetic bearings
[DE81-024801] N82-11473
CYLINDRICAL CHAMBERS
Standard specification for air-brake reserviors
[SABS-1312-1980] N82-11484

D

DAMAGE ASSESSMENT
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104622] N82-11136
Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456
DAMPING
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034
DATA ACQUISITION
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11436
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-029573] N82-11810
Guide to the data-acquisition software of the Doublet III computer system
[DE81-029616] N82-11813
DATA BASE MANAGEMENT SYSTEMS
Design and analysis of a multi-backend database system for performance improvement, functionality expansion and capacity growth, part 2
[AD-A104445] N82-11790
A back-end data management experiment
[AD-A104579] N82-11794
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029647] N82-11795
FGDIS primer: Major equipment/component classifications, problem/solution access codes, and definitions related to FGD systems as contained in the Flue Gas Desulfurization Information System (FGDIS)
[PB81-225848] N82-11985
DATA BASES
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
International comparison of residential energy use: Indicators of residential energy use and efficiency. Part 1: The data base
[DE81-[illegible]] N82 11592
Data base specifications for the OPAQUE program
[AD-A104340] N82-11709
Design and analysis of a multi-backend database system for performance improvement, functionality expansion and capacity growth, part 2
[AD-A104445] N82-11790
Integrating medical knowledge and clinical data banks: Discovery and representation of causal relationships from a large time-oriented clinical database. The RX project
[PB81-227233] N82-11987
DATA COLLECTION PLATFORMS
Data collection and processing for the ACES — annual cycle energy system demonstration house
[DE81-030830] N82-11565
DATA MANAGEMENT
Design and analysis of a multi-backend database system for performance improvement, functionality expansion and capacity growth, part 2
[AD-A104445] N82-11790
A back-end data management experiment
[AD-A104579] N82-11794
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029647] N82-11795
SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816
DATA PROCESSING
Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] N82-11103
Goldstone (GDSCC) administrative computing N82-11306
The use of DMSP digital data for auroral measurements
[AD-A104392] N82-11707
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-029573] N82-11810
SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816
Use of microprocessors in a neutrino experiment
[DE81-026057] N82-11875
DATA REDUCTION
Numerical differentiation of noisy data
[AD-A104631] N82-11831
DATA RETRIEVAL
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029647] N82-11795
Content representation for retrieval
[PB81-170672] N82-11984
DATA SMOOTHING
Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112
DATA STORAGE
Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029647] N82-11795
DATA SYSTEMS
Integrating medical knowledge and clinical data banks: Discovery and representation of causal relationships from a large time-oriented clinical database. The RX project
[PB81-227233] N82-11987
DATA TRANSMISSION
Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11064
Strategies for weather-dependent data acquisition N82-11286
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11436
Remote Medical Diagnosis System RMDS design review meeting minutes
[AD-A104555] N82-11772
DECAY RATES
Decay heat curve evaluation test
[DE81-027181] N82-11976
DECISION MAKING
Management of redundancy in flight control systems using optimal decision theory N82-11084
User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325
Mechanical transformation of task heuristics into operational procedures
[AD-A104674] N82-11802
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11840
DECISION THEORY
Mechanical transformation of task heuristics into operational procedures
[AD-A104674] N82-11802
DECOMPOSITION
Development of inverse Raman spectroscopy for probing rapidly decomposing explosives and propellants
[AD-A104362] N82-11226
DEEP SPACE
The deep space optical channel. 2: Wave propagation effects N82-11289
RFI channels, 2 N82-11290
The R sub 0 parameter for the Gaussian channel N82-11291
Traveling-wave maser, closed cycle refrigerator automation N82-11294
DEEP SPACE NETWORK
The Telecommunications and Data Acquisition report
[NASA-CR-164639] N82-11279
Radio astronomy N82-11280
A dedicated 26-m SETI sky survey instrument facility: A feasibility study N82-11281
DSN ground communication facility N82-11282
Networks consolidation program N82-11283
DSN model for use in strategic planning N82-11284
Pioneers 6 through 12 mission support N82-11285
Cryogenic filters for RFI protection N82-11293
Digital SAR processing using a fast polynomial transform N82-11295
Minimizing the time to troubleshoot a failed system N82-11296
The quality assurance role in the Deep Space Network N82-11302
Networks consolidation program: Maintenance and Operations (M&O) staffing estimates N82-11303
Relocation of the Deep Space Network Maintenance Center N82-11305
Goldstone (GDSCC) administrative computing N82-11306
Special activity utilization of GDSCC antennas during 1980 N82-11307
An optimization model for energy generation and distribution in a dynamic facility N82-11310
DEFECTS
Hot-spot initiation of heterogeneous explosives
[DE81-027801] N82-11266
DEFENSE PROGRAM
Where are we in the space war?
[NASA-TM-76604] N82-11096
DEFLAGRATION
Deflagration-to-Detonation Transition (DDT) project
[DE81-030979] N82-11241
DEFLECTORS
The use of remote active deflectors for feeding UHF relay stations
[BBC-RD-1981/5] N82-11334
DEFORMATION
Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2056] N82-11487
DEGRADATION
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104622] N82-11136
DEHYDRATION
Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030156] N82-11235
DEICERS
Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056
Ice protection system technology N82-11060
DEIONIZATION
On electron beam ionization of air and chemical reactions for disturbed air deionization
[AD-A104517] N82-11671
DEMAND (ECONOMICS)
Electric power supply and demand for the contiguous United States, 1981 - 1990
[DE81-027126] N82-11376
National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11966
DENDRITIC CRYSTALS
The quantitative determination of non-metallic inclusions by a mathematical statistical method
[RAE-LIB-TRANS-2066] N82-11179

DENSE PLASMAS
Heating of a dense plasma with an intense relativistic electron beam: Initial observations
[DE81-025348] N82-11945

DENSITY (MASS/VOLUME)
Semiconductor measurement technology: The relationship between resistivity and dopant density for phosphorus and boron doped silicon
[PB81-221327] N82-11975

DENSITY DISTRIBUTION
Optical transparency of inexpensive salt solutions for construction of density-gradient ponds
[DE81-030632] N82-11559

DENSITY MEASUREMENT
Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11866

DEPENDENT VARIABLES
The determination of navigational and meteorological variables measured by NOAA/RFC WP3D aircraft
[PB81-225466] N82-11743

DEPLETION
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

DEPOSITION
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025483] N82-11193
A method for using aerial photos in delineating historic patterns of beach accretion and retreat
[PB81-223836] N82-11536

DESICCANTS
Analysis of solar desiccant systems and concepts
[DE81-023027] N82-11612

DESIGN ANALYSIS
Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025826] N82-11474
Second generation heliostat, volume 1
[DE81-029616] N82-11564
Attached sunspace design analysis
[DE81-026738] N82-11601
Molecular-beam system for the study of transient combustion processes
[DE81-030663] N82-11672

DESORPTION
Ocean thermal energy conversion gas-desorption studies. Volume 2: Deaeration in a packed column and a barometric intake system
[DE81-030469] N82-11619

DESULFURIZING
Coal desulfurization by low temperature chlorinolysis, phase 3
[NASA-CR-164957] N82-11145
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239
Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652
EPA utility FGD (Flue Gas Desulfurization) survey
[PB81-225773] N82-11679
FGDIS primer: Major equipment/component classifications, problem/solution access codes, and definitions related to FGD systems as contained in the Flue Gas Desulfurization Information System (FGDIS)
[PB81-225948] N82-11965

DETECTION
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229
Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434
A ground-motion displacement gauge
[AD-A104325] N82-11437
Detection of vibrations in metallic structures using small passive magnetic fields
[AD-A104405] N82-11495
Coal mine hazard detection using synthetic pulse radar
[PB81-224412] N82-11538

DETONATION
Deflagration-to-Detonation Transition (DDT) project
[DE81-030979] N82-11241

DETONATORS
AC firing ability of detonation
[PB81-216053] N82-11272
Computer modeling of an all-secondary explosive hot-wire device
[DE81-030438] N82-11439

DEUTERIUM
Trapping and surface permeation of deuterium in Fe, Ni and stainless steel: An ion-beam study
[DE81-023303] N82-11201
Tritium induced X-ray emission from glass shell inertial fusion targets
[DE81-025899] N82-11936
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974

DEVELOPING NATIONS
Urban ecosystem and resource-conserving urbanism in Third World cities
[DE81-029654] N82-11995

DF LASERS
Pulsed DF laser effects study
[AD-A104575] N82-11457

DIAGNOSIS
Remote Medical Diagnosis System RMDS design review meeting minutes
[AD-A104555] N82-11772
Prediction, diagnosis, and causal thinking in forecasting
[AD-A104372] N82-11843

DIAPHRAGMS (MECHANICS)
Diaphragm Stirling engine heat-actuated heat pump development
[DE81-024076] N82-11423

DIELECTRIC PROPERTIES
R&D services to develop an improved isolation technology radiation hardened bipolar integrated circuits (PEDIC)
[AD-A104657] N82-11367

DIELECTRICS
Testing of a spacecraft model in a combined environment simulator
[NASA-TM-82723] N82-11106
Electron attachment as a probe of photoionization processes in liquid media — pyrene
[DE81-026352] N82-11163
Elastomer unistructure insulators
[DE81-024366] N82-11219

DIESEL ENGINES
Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11068
Informational report on the measurement and characterization of diesel exhaust emissions
[PB81-221251] N82-11175
Evaluation of exhaust emissions data for diesel engines used in underround mines
[PB81-225377] N82-11673

DIESEL FUELS
Outgassing of two synthetic fuels
[AD-A104580] N82-11231
Transportation fuels from synthetic gas
[DE81-029614] N82-11256

DIFFERENCE EQUATIONS
Difference method in fluid dynamics. 1. Numerical solution of two dimensional vorticity equation
N82-12022

DIFFERENTIAL CALCULUS
Numerical differentiation of noisy data
[AD-A104631] N82-11831

DIFFERENTIAL EQUATIONS
Nonclassical orthogonal polynomials and differential equations N82-11823

DIFFRACTION PATTERNS
Automation of electron diffraction analysis in an analytical electron microscope
[DE81-027255] N82-11159
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12289] N82-11195

DIFFUSION COEFFICIENT
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199

DIGITAL COMPUTERS
Aircraft digital input controlled hydraulic actuation and control system
[AD-A104263] N82-11072

DIGITAL DATA
The use of DMSP digital data for auroral measurements
[AD-A104392] N82-11707

DIGITAL FILTERS
Recovery of seismic signals in noise by adaptive processing
[DE81-029469] N82-11713
Constrained adaptive least mean squared filters
[AD-A104625] N82-11830

DIGITAL SYSTEMS
Practical design and realization of a digital adaptive flight control system N82-11079
Control law design for transport aircraft flight tasks
N82-11080
Application of nonlinear systems inverses to automatic flight control design: System concepts and flight evaluations N82-11083

DIGITAL TECHNIQUES
Digital control of machine tools
[DE81-029850] N82-11476

DIGITAL TRANSDUCERS
Digital ultrasonics signal processing: Flaw data post processing use and description
[NASA-CR-161882] N82-11862

DIODES
Scalability of light ion beams to reach fusion conditions
[DE81-024443] N82-11953

DIPHENYL COMPOUNDS
Physical studies of aromatic methylenes
N82-11113

DIPOLE ANTENNAS
Cavity-backed, micro-strip dipole antenna array
[NASA-CASE-MSC-18606-1] N82-11336

DIPOLE MOMENTS
An electrostatic model for energies of molecules in solution N82-11869

DIRECTIONAL ANTENNAS
Rehabilitation of 64-meter-antenna radial bearing
N82-11301
Special activity utilization of GDSCC antennas during 1980 N82-11307

DISORIENTATION
Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104684] N82-11781

DISPLACEMENT
Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434

DISPLAY DEVICES
Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11064
Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11065
NOCA upgrade N82-11304
Second Image Generation/Display Conference: Closing comments — flight simulators
[AD-A104676] N82-11807

DISSOLVED GASES
Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

DISTILLATION
Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030156] N82-11235

DISTRIBUTION MOMENTS
Estimation problems associated with the Weibull distribution
[DE81-030466] N82-11841

DISTRICT OF COLUMBIA
Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11716

DIURNAL VARIATIONS
Variations in atmospheric angular momentum
[NASA-CR-166712] N82-11690
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723
Some analysis on the diurnal variation of rainfall over the Atlantic Ocean
[NASA-CR-164937] N82-11724

DOMESTIC ENERGY
US energy strategies: Some options for eliminating oil imports by the year 2000
[PB81-226052] N82-11626

DOPED CRYSTALS
Semiconductor measurement technology: The relationship between resistivity and dopant density for phosphorus and boron doped silicon
[PB81-221327] N82-11975

DOPPLER RADAR
Doppler radar data analysis during fiscal year 1980
[PB81-225476] N82-11742

DRAG
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104562] N82-11402

DRAG REDUCTION
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016

DRAINAGE
Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Floridan aquifer
[PB81-225818] N82-11529

DRIFT RATE
Removal of drift from frequency stability measurements N82-11296

DROPS (LIQUIDS)
Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429

DRUMS (CONTAINERS)
Materials considerations relative to multibarrier waste isolation
[DE81-029104] N82-11894

DUCT GEOMETRY
Investigation of heat transfer in straight and curved rectangular ducts for laminar and transition flows
[AD-A104804] N82-11401
Analyses of ductile flow and fracture in two dimensions
[DE81-029661] N82-11506

DUCTILITY
Failure analysis of a tool steel torque shaft
[NASA-TM-82756] N82-11184

DUCTS
Investigation of heat transfer in straight and curved rectangular ducts for laminar and transition flows
[AD-A104804] N82-11401

DYES
Method for retarding dye fading during archival storage of developed color photographic film — inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432

DYNAMIC CHARACTERISTICS
Finite element analysis of the split Hopkinson bar
[DE81-030367] N82-11503

DYNAMIC CONTROL
An introduction to stochastic optimal control theory N82-11076
System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861

DYNAMIC LOADS
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494

DYNAMIC MODELS
New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11067

DYNAMIC PROGRAMMING
Partial differential equations from dynamic programming equations N82-11822

DYNAMIC RESPONSE
Nonparametric identification of a class of nonlinear close-coupled dynamic systems
[NASA-CR-164946] N82-11098
Shock compression of beryllium
[DE81-024062] N82-11200
Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027669] N82-11504

DYNAMIC TESTS
Advanced superposition methods for high speed turbopump vibration analysis
[NASA-CR-165379] N82-11485

E

EAR
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2066] N82-11767

EARTH (PLANET)
Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691

EARTH ALBEDO
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723

EARTH ATMOSPHERE
Variations in atmospheric angular momentum
[NASA-CR-166712] N82-11690

EARTH CORE
Monte Carlo calculations of the melting point of iron at core pressures N82-11681

EARTH CRUST
COCORP traverses in Wyoming and Oklahoma N82-11684
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations N82-11685
Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687
Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691
Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas — Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

EARTH LIMB
Application of visible monochromatic auroral imaging data for modeling infrared Earth-limb morphology
[AD-A104343] N82-11706

EARTH MANTLE
Hotspots, polar wander, Mesozoic convection and the geoid
[NASA-CR-164943] N82-11694

EARTH MOVEMENTS
The piezomagnetic effect: Limits on detectability using a combined vector and scalar magnetometer array N82-11430
A ground-motion displacement gauge
[AD-A104325] N82-11437
Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712

EARTH PLANETARY STRUCTURE
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations N82-11685
Hotspots, polar wander, Mesozoic convection and the geoid
[NASA-CR-164943] N82-11694
Study of the time evolution of the lithosphere
[NASA-CR-164968] N82-11696

EARTH ROTATION
Variations in atmospheric angular momentum
[NASA-CR-166712] N82-11690

EARTH SURFACE
A new method for measuring the acoustic impedance of the ground N82-11856

EARTHQUAKE RESISTANCE
Seismic resistance characteristics of reinforced concrete beam-supported floor slabs in building structures: Contribution of floor systems to earthquake resistance of building structural frames
[PB81-219172] N82-11326
Racking tests of non-structural building partitions (The behavior of architectural (nonstructural) building components during earthquakes)
[PB81-220790] N82-11328

EARTHQUAKES
The quantitative recognition and evaluation of seismic quiescence: Applications to earthquake prediction and subduction zone tectonics N82-11682
Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687
Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas — Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

ECHO SOUNDING
Pulsed-echo interface wave characterization of bolted plates N82-11126

ECLIPSING BINARY STARS
H-alpha emission from a disk in the close binary U Cephei: A Monte Carlo simulation N82-12001

ECONOMIC ANALYSIS
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153
Technical and economic aspects of hydrogen storage in metal hydrides
[NASA-TM-78810] N82-11223
Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11236
Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025618] N82-11240
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
Alcohol fuels in the United States
[DE81-026013] N82-11265
Second generation heliostat, volume 1
[DE81-029618] N82-11584

ECONOMIC IMPACT
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts — ethyl alcohol production
[DE81-029987] N82-11245

ECONOMY
Interrelationships of energy and the economy: A supplement to the National Energy Policy Plan required by Title VIII of the US Department of Energy Organization Act (Public Law 95-91)
[DE81-027526] N82-11613

ECOSYSTEMS
Urban ecosystem and resource-conserving urbanism in Third World cities
[DE81-029654] N82-11995

EDDY CURRENTS
High-voltage air-core pulse transformers
[DE81-030999] N82-11370
Eddy current flows around cracks in thin plates for nondestructive testing
[AD-A104407] N82-11481
Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851

EDDY VISCOSITY
Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395

EDGE LOADING
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

EFFECTIVE PERCEIVED NOISE LEVELS
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860

ELASTIC BENDING
An improved transverse shear deformation theory for laminated antisotropic plates
[NASA-TP-1903] N82-11488

ELASTIC PROPERTIES
Engineering approach for elastic-plastic fracture analysis
[DE81-904216] N82-11502
Formulas for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222846] N82-11506

ELASTIC SCATTERING
Use of microprocessors in a neutrino experiment
[DE81-026057] N82-11875
Elastic and inelastic psi production by muons
[DE81-025326] N82-11877

ELASTIC WAVES
DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124
The 4-day temperature wave in the winter polar stratosphere N82-11720

ELASTOMERS
Elastomer unistructure insulators
[DE81-024366] N82-11219
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494

ELECTRIC BATTERIES
Overview of the applied battery and electrochemical research program
[DE81-027397] N82-11594

ELECTRIC CONDUCTORS
Conductor fatigue-life research
[DE81-904209] N82-11369

Advanced selenide thermoelectric development program
[DE81-027623] N82-11562

ELECTRIC CONTACTS
Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471
A study of metal-semiconductor contacts on indium phosphide
[AD-A104439] N82-11965

ELECTRIC CURRENT
Computer modeling of an all-secondary explosive hot-wire device
[DE81-030438] N82-11439

ELECTRIC DISCHARGES
Voltage gradients in solar array cavities as possible breakdown sites in spacecraft-charging-induced discharges
[NASA-TM-82710] N82-11107

ELECTRIC ENERGY STORAGE
Advanced development of electrical-energy-storage components for high reliability applications
[DE81-025364] N82-11591

ELECTRIC FIELDS
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104
Particle trajectories in a model electric field 1 — neutralizing spacecraft surfaces
[AD-A104507] N82-11670

ELECTRIC GENERATORS
Preliminary evaluation of advanced coal-based electricity-generating technologies by means of system-integration analysis
[DE81-029969] N82-11573
Considerations for the design, implementation, and effective operation of Sandia's super-power generators
[DE81-025404] N82-11908

ELECTRIC NETWORKS
Concept for a power system controller for large space electrical power systems
[NASA-TP-1939] N82-11109

ELECTRIC POTENTIAL
Elastomer unistructure insulators
[DE81-024366] N82-11219

ELECTRIC POWER PLANTS
Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240
Possible use of coal in Hawaii, 1980 - 2000
[DE81-028266] N82-11263
Vibration signature analysis and acoustic-emission monitoring at Brayton Point
[DE81-904232] N82-11507
Meteorological Effects of Thermal Energy Releases (METER) program
[DE81-030431] N82-11640

ELECTRIC POWER SUPPLIES
Electric power supply and demand for the contiguous United States, 1981 - 1990
[DE81-027126] N82-11376

ELECTRIC POWER TRANSMISSION
Project demonstration of wind-turbine electricity: Interconnecting a northern Michigan fruit farm with a major utility
[DE81-030950] N82-11380

ELECTRIC PROPULSION
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems. Volume 1: Executive summary
[NASA-CR-165502-VOL-1] N82-11110
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems, volume 2
[NASA-CR-165502-VOL-2] N82-11111
Lithium/iron sulfide cell development for electric-vehicle propulsion
[DE81-023570] N82-11996

ELECTRIC WIRE
Investigation of the strength of shielded and unshielded underwater electrical cables
[AD-A104314] N82-11364
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 1 — underground transmission lines
[DE81-904195] N82-11382
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-904210] N82-11383

ELECTRICAL FAULTS
Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: including acousto-optic techniques
[DE81-029680] N82-11381

ELECTRICAL INSULATION
Elastomer unistructure insulators
[DE81-024366] N82-11219
Investigation of the strength of shielded and unshielded underwater electrical cables
[AD-A104314] N82-11364
Low temperature growth and electrical characterization of insulators for GaAs MISFETS
[NASA-CR-164972] N82-11959

ELECTRICAL MEASUREMENT
The piezomagnetic effect: Limits on detectability using a combined vector and scalar magnetometer array N82-11430
Electrical conductivity structure of the San Andreas fault in central California N82-11686

ELECTRICAL RESISTIVITY
Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185
Surface resistivity measurements of candidate subreflector surfaces N82-11300
Scattering of electromagnetic waves by obstacles in the presence of the Earth's surface
[AD-A104242] N82-11342
The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11546
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027234] N82-11557
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027254] N82-11558
Electrical conductivity structure of the San Andreas fault in central California N82-11686
Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931
Negative-U for point defects in silicon
[AD-A104482] N82-11966
Semiconductor measurement technology: The relationship between resistivity and dopant density for phosphorus and boron doped silicon
[PB81-221327] N82-11975

ELECTRICITY
Engineering challenges of fusion-reactor development
[DE81-024129] N82-11907

ELECTRO-OPTICS
Physical characterization of electronic materials
[AD-A104494] N82-11135
Submicron-particle absorption spectroscopy by photothermal modulation of MIE scattered light
[DE81-025096] N82-11160
Theoretical and experimental studies of the electro-optic effect: Toward a microscopic understanding
[AD-A104363] N82-11961

ELECTROACOUSTIC TRANSDUCERS
A comparison of weighting techniques for SAW transducers at UHF
[AD-A104510] N82-11362

ELECTROACOUSTIC WAVES
Pulsed-echo interface wave characterization of bolted plates N82-11126

ELECTROCATALYSTS
Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165505] N82-11545
Oxygen reduction on carbon-supported platinum fuel-cell electrodes in H sub 3 Po sub 4
[DE81-027303] N82-11582

ELECTROCHEMICAL CELLS
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11578
Biologically assisted photoelectrochemical cell
[DE81-025806] N82-11607

ELECTROCHEMICAL MACHINING
Tooling for electrochemical deburring
[DE81-030190] N82-11475

ELECTROCHEMISTRY
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025676] N82-11194
Investigation of the zinc electrode reaction — nickel zinc batteries
[DE81-030221] N82-11368
Electrochemical conditions within stress corrosion cracks (experimental techniques)
[AD-A104246] N82-11497
Overview of the applied battery and electrochemical research program
[DE81-027367] N82-11594

ELECTRODES
Investigation of the zinc electrode reaction — nickel zinc batteries
[DE81-030221] N82-11368
Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165505] N82-11545

ELECTRODYNAMICS
Tooling for electrochemical deburring
[DE81-030190] N82-11475

ELECTROLYSIS
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572

ELECTROLYTES
The volumes and heat capacities of nonelectrolytes and organic electrolytes in methanol at 25 C
N82-11142

ELECTROLYTIC CELLS
Investigation of Lithium Sulfur Dioxide (LI/SO2) battery safety hazard
[AD-A104326] N82-11552
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572
Recent advances in lead-acid cell research and development
[DE81-023104] N82-11580
Lithium/iron sulfide cell development for electric-vehicle propulsion
[DE81-023570] N82-11996

ELECTROMAGNETIC NOISE
Recovery of seismic signals in noise by adaptive processing
[DE81-029469] N82-11713

ELECTROMAGNETIC PULSES
System safety program plan — electromagnetic pulse testing of the A-7E aircraft
[AD-A104557] N82-11354

ELECTROMAGNETIC RADIATION
Goldstone high power radiation control
N82-11308
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 1: Investigation of resonance extraction procedures — for target recognition
[AD-A104530] N82-11350
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 2: Appendices — for target recognition
[AD-A104531] N82-11351
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 3: Translation of Prony's method — for target recognition
[AD-A104532] N82-11352

ELECTROMAGNETIC SCATTERING
Scattering of electromagnetic waves by obstacles in the presence of the Earth's surface
[AD-A104242] N82-11342
Electromagnetic scattering by targets over a real Earth
[AD-A104492] N82-11347

ELECTROMAGNETISM
Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851

ELECTROMOTIVE FORCES
Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199

ELECTRON ACCELERATORS
Brookhaven National Laboratory Tandem accelerator upgrading program
[DE81-0[illegible]] N82-11887
ELECTRON ATTACHMENT
Electron attachment as a probe of photoionization processes in liquid media — pyrene
[DE81-0[illegible]] N82-11163
ELECTRON BEAMS
Two-dimensional theory and simulation of free electron lasers
[DE81-025985] N82-11481
On electron beam ionization of air and chemical reactions for disturbed air deionization
[AD-A104517] N82-11871
Trajectory analysis of the electrons in a magnetron-type gun
[DE81-027880] N82-11905
ELECTRON BOMBARDMENT
Testing of a spacecraft model in a combined environment simulator
[NASA-TM-82723] N82-11106
ELECTRON COUNTERS
High latitude electron detectors on Satellite P78-1: Preliminary data results
[AD-A104518] N82-11701
ELECTRON DENSITY (CONCENTRATION)
High latitude electron detectors on Satellite P78-1: Preliminary data results
[AD-A104518] N82-11701
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017
ELECTRON DIFFRACTION
Automation of electron diffraction analysis in an analytical electron microscope
[DE81-027255] N82-11159
ELECTRON ENERGY
Investigation of direct solar-to-microwave energy conversion techniques
[NASA-CR-161883] N82-11544
Electron-temperature requirements for neutralized inertial-confinement-fusion light-ion beams
[DE81-025352] N82-11884
Oblique propagation of electron thermal modes below the electron plasma frequency without boundary effects
[IPPJ-533] N82-11928
ELECTRON GUNS
Trajectory analysis of the electrons in a magnetron-type gun
[DE81-027880] N82-11905
ELECTRON MICROSCOPES
Automation of electron diffraction analysis in an analytical electron microscope
[DE81-027255] N82-11159
ELECTRON MICROSCOPY
Experiments in high voltage electron microscopy — radiation damage in ceramics and alloys
[DE81-025574] N82-11375
Computer processing of periodic electron micrographs N82-11815
ELECTRON PARAMAGNETIC RESONANCE
Non-linear evolution of an obliquely propagating Langmuir wave N82-11385
ELECTRON PRECIPITATION
Two variable modelling of equatorward boundary of auroral precipitation
[AD-A104378] N82-11706
ELECTRON RADIATION
Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116
ELECTRON SPIN
H-O processor computer code
[DE81-028889] N82-11814
ELECTRON STATES
The hydrogen atom in a strong uniform magnetic field N82-11990
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11984
ELECTRON TRAJECTORIES
Trajectory analysis of the electrons in a magnetron-type gun
[DE81-027880] N82-11905
ELECTRON TRANSITIONS
Physical studies of aromatic methylenes N82-11113
ELECTRONIC EQUIPMENT
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030962] N82-11566
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030986] N82-11567
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031921] N82-11568
ELECTRONIC EQUIPMENT TESTS
Engineering Analysis System (EASY)
[DE81-027508] N82-11846
ELECTRONIC TRANSDUCERS
Outsider's look at flight instrumentation
[DE81-025409] N82-11066
ELECTRONS
Negative-U for point defects in silicon
[AD-A104482] N82-11986
ELECTROPHORESIS
Static continuous electrophoresis device
[NASA-CASE-MFS-25306-1] N82-11147
ELECTROPLATING
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11188
ELECTROSTATIC PRECIPITATORS
Small conductive particle sensor — microfiber size determination
[NASA-CASE-LAR-12552-1] N82-11431
ELECTROSTATIC WAVES
Oblique propagation of electron thermal modes below the electron plasma frequency without boundary effects
[IPPJ-533] N82-11928
ELECTROSTATICS
An electrostatic model for energies of molecules in solution N82-11889
EMBRITTLEMENT
Liquid and solid metal embrittlement
[AD-A103048] N82-11187
EMERGENCY LIFE SUSTAINING SYSTEMS
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783
EMISSION
Observations of molecular clouds containing reflection nebulae N82-11899
EMISSION SPECTRA
X-ray and gamma-ray observations of pulsed emission from radio pulsars N82-12000
H-alpha emission from a disk in the close binary U Cephei: A Monte Carlo simulation N82-12001
EMISSIVITY
An analysis of cloud property retrieval using infrared sounder data
[PB81-221606] N82-11732
EMPLOYEE RELATIONS
Applying science and technology to improve local government productivity
[PB81-217986] N82-11978
ENERGY ABSORPTION FILMS
National photovoltaic program in amorphous materials
[DE81-025906] N82-11609
ENERGY BUDGETS
Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-026783] N82-11320
Energy analysis for a sample building by the proposed ASHRAE simplified method
[DE81-027189] N82-11323
ENERGY CONSERVATION
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
Assessment of roofing research
[DE81-027077] N82-11322
EPA evaluation of the FUEL-MAX device under Section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-228886] N82-11479
EPA evaluation of the Automotive Cylinder Deactivator System (ACDS) under Section 511 of the Motor Vehicle Information and Cost Saving Act
[PB81-228256] N82-11480
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB81-218141] N82-11535
Modeling energy-conservation potentials of community energy-system technologies
[DE81-026059] N82-11589
SOLPLAN report: An assessment of barriers and incentives to conservation and alternative-energy use in the residential sector in Wisconsin
[DOE/CS-30292/3] N82-11614
Third automotive fuel economy research contractors coordination meeting
[PB81-222754] N82-11627
ENERGY CONSUMPTION
Site And Neighborhood Design (SAND): Development of simplified automated building thermal load procedures, phase 1
[DE81-027136] N82-11317
Assessment of building diagnostics
[DE81-027078] N82-11321
Energy analysis for a sample building by the proposed ASHRAE simplified method
[DE81-027189] N82-11323
Well-water-source heat pump field performance study
[DE81-024136] N82-11419
International comparison of residential energy use: Indicators of residential energy use and efficiency. Part 1: The data base
[DE81-026550] N82-11592
Long-term performance of the Hunn passive solar residence
[DE81-026735] N82-11600
ENERGY CONVERSION
Analysis of thermal/mechanical energy-conversion concepts
[DE81-027854] N82-11585
Residual-energy-applications program: EAST-facility requirements document
[DE81-027489] N82-11616
Site selection for small wind energy conversion systems for US Department of Energy field evaluation program
[PB81-226862] N82-11624
ENERGY CONVERSION EFFICIENCY
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027234] N82-11557
Use of solar thermal energy to generate electricity
[DE81-026797] N82-11606
ENERGY DISSIPATION
Energy losses in conductors carrying very high currents
[DE81-025367] N82-11373
Laboratory determination of frosting and defrosting losses for a high efficiency air-source heat pump
[DE81-023218] N82-11416
ENERGY LEVELS
Elastic and inelastic psi production by muons
[DE81-025326] N82-11877
ENERGY POLICY
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030492] N82-11165
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts — ethyl alcohol production
[DE81-029987] N82-11245
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
Advanced-gasification processes
[DE81-030184] N82-11254
Transportation fuels from synthetic gas
[DE81-029614] N82-11258

Hydrogen storage-bed design for tritium systems test assembly
[DE81-025336] N82-11262
Possible use of coal in Hawaii, 1980 - 2000
[DE81-028286] N82-11263
Alcohol fuels in the United States
[DE81-026013] N82-11265
LLNL underground coal gasification project
[DE81-030634] N82-11267
Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274
Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-226979] N82-11275
Synthetic fuel development for the Upper Missouri River Basin. Section 13: Water assessment report
[PB81-224537] N82-11276
Low-cost solar flat-plate-collector development
[DE81-025081] N82-11584
Modeling energy-conservation potentials of community energy-system technologies
[DE81-026059] N82-11589
Interrelationships of energy and the economy: A supplement to the National Energy Policy Plan required by Title VIII of the US Department of Energy Organization Act (Public Law 95-91)
[DE81-027526] N82-11613
SOLPLAN report: An assessment of barriers and incentives to conservation and alternative-energy use in the residential sector in Wisconsin
[DOE/CS-30292/3] N82-11614
An assessment of seldcted solar energy industry activities
[PB81-222424] N82-11623
Site selection for small wind energy conversion systems for US Department of Energy field evaluation program
[PB81-226862] N82-11624
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226813] N82-11625
US energy strategies: Some options for eliminating oil imports by the year 2000
[PB81-226052] N82-11626
Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309] N82-11657

ENERGY REQUIREMENTS
An optimization model for energy generation and distribution in a dynamic facility N82-11310
Uncertainties associated with inertial-fusion ignition
[DE81-025406] N82-11944

ENERGY SOURCES
Gas recovery from coal deposits
[PB81-222291] N82-11271
Thermal and electrochemical biomass conversion at SERI
[DE81-030507] N82-11563

ENERGY SPECTRA
Decay heat curve evaluation test
[DE81-027181] N82-11976

ENERGY STORAGE
Hydrogen storage-bed design for tritium systems test assembly
[DE81-025336] N82-11262
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB81-218141] N82-11535
Data collection and processing for the ACES — annual cycle energy system demonstration house
[DE81-030630] N82-11555
Recent advances in lead-acid cell research and development
[DE81-023104] N82-11580
Mechanical Energy Storage Technology (MEST) development
[DE81-026600] N82-11596
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621
Assessment of flywheel system benefits in selected vehicle applications
[DE81-025976] N82-11997

ENERGY TECHNOLOGY
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045
Transport characteristics of alternate slurry fuels
[DE81-026580] N82-11255
Chemical heat pump program: An overview
[DE81-025086] N82-11414
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB81-218141] N82-11535
Heat storage duration
[DE81-026635] N82-11602
An assessment of selected solar energy industry activities
[PB81-222424] N82-11623
Intergrated assessment for energy-related environmental standards: A summary of issues and findings
[DE81-026552] N82-11646

ENGINE CONTROL
Space shuttle main engine controller
[NASA-TP-1932] N82-11784

ENGINE DESIGN
Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11066
Development of multivariable controllers for aircraft turbine engines N82-11067
Integrated analysis of engine
[NASA-TM-82713] N82-11491

ENGINE INLETS
A summary of V/STOL inlet analysis methods
[NASA-TM-82725] N82-11043

ENGINE TESTS
Adaptation of a turbine test facility to high-temperature research
[RAE-LIB-TRANS-2064] N82-11089

ENGINEERING MANAGEMENT
Goldstone (GDSCC) administrative computing N82-11306

ENTHALPY
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170
High-temperature enthalpy and X-ray powder diffraction data for aluminum sulfide (Al2S)
[PB81-226250] N82-11174

ENTRAINMENT
Performance limits of gravity-assist heat pipes with simple wick structures
[LA-UR-81-969] N82-11427

ENTROPY
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

ENVIRONMENT EFFECTS
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts — ethyl alcohol production
[DE81-029967] N82-11245
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
Advanced-gasification processes
[DE81-030184] N82-11254
Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274
Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-904014] N82-11520
Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521
Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524
Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525
Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-026603] N82-11644
OTEC environmental biological oceanographic program
[DE81-027402] N82-11645
Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222620] N82-11653
Assessment of hazard potential from combustion of wastes in industrial boilers
[PB81-221669] N82-11656
Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309] N82-11657
Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712
Geothermal environmental assessment baseline study: Vegetation and soils of the Roosevelt Hot Springs geothermal resource area
[PB81-223209] N82-11717
National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11966

ENVIRONMENT POLLUTION
Geochemical controls on trace metal transport in aqueous environmental systems N82-11631
The planning and management of California's coastal resources
[PB81-224057] N82-11670

ENVIRONMENT PROTECTION
A proposed new policy for planetary protection
[NASA-CR-164947] N82-11095
Environmental protection as an ongoing component of large facilities engineering projects N82-11633
Intergrated assessment for energy-related environmental standards: A summary of issues and findings
[DE81-026552] N82-11646

ENVIRONMENTAL CHEMISTRY
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 1, phase 2
[AD-A104552] N82-11484
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 2, phase 2
[AD-A104553] N82-11485

ENVIRONMENTAL MONITORING
Coal gasifier parameters influencing environmental pollutant production
[PB81-221301] N82-11273
Vibration signature analysis and acoustic-emission monitoring at Brayton Point
[DE81-904232] N82-11507
Environmental Monitoring Report, Sandia National Labs., Albuquerque, New Mexico, 180
[DE81-027639] N82-11649
Technical activities of the Office of Environmental Measurements - 1980
[PB81-227960] N82-11677

ENVIRONMENTAL SURVEYS
Solvent-Refined Coal-1 Demonstration Project. Final environmental impact statement, Volume 1 of 2 — coal liquefaction plant at Newman, Kentucky
[DE81-025963] N82-11252

ENVIRONMENTAL TESTS
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161867] N82-11181

EPITAXY
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204

EPOXY RESINS
The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11206
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104658] N82-11213

EQUATIONS OF STATE
Deflagration-to-Detonation Transition (DDT) project
[DE81-030979] N82-11241
Performance of a 100-kV, 78kJ electric-gun system
[DE81-029603] N82-11374
EQUATORIAL ATMOSPHERE
Two variable modelling of equatorward boundary of auroral precipitation
[AD-A104376] N82-11706
ALTAIR radar study of equatorial spread F
[AD-A104554] N82-11710
EQUILIBRIUM EQUATIONS
A two-step approach to finite element ordering
[AD-A104220] N82-11827
EQUIPMENT SPECIFICATIONS
Standard specification for industrial safety-belt assemblies
[SABS-809-1980] N82-11278
Standard specification for apparatus for gamma radiography
[SABS-1317-1980] N82-11433
Standard specification for air-brake reserviors
[SABS-1312-1980] N82-11464
Equipment for flood and flash flood warning systems
[PB81-224131] N82-11749
EROSION
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-904208] N82-11217
A method for using aerial photos in delineating historic patterns of beach accretion and retreat
[PB81-222656] N82-11536
ERROR ANALYSIS
Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723
ERROR DETECTION CODES
Symbol error rate performance evaluation of the LM37 multimegabit telemetry modulator-demodulator unit N82-11269
On-line failure detection of vibrating structures
[UCRL-86089] N82-11505
ERRORS
Estimation of radar range biases at multiple sites
[AD-A104306] N82-11346
ESTIMATES
An error budget for the JPL hydrogen maser receiver N82-11297
Removal of drift from frequency stability measurements N82-11298
ESTIMATING
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738
Generalized L-, M- and R-statistics
[AD-A104480] N82-11835
A note on a nonparametric maximum penalized likelihood estimator of the probability density function of a positive random variable. AMPLE with positive support
[AD-A104478] N82-11836
Estimation problems associated with the Weibull distribution
[DE81-030466] N82-11641
ESTUARIES
On the computation of barotropic tides in deep estuaries with application to Knight inlet, British Columbia
[PB81-220147] N82-11754
Time dependent mixing in a salt wedge estuary N82-11755
ETHERS
Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027087] N82-11895
ETHYL ALCOHOL
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts — ethyl alcohol production
[DE81-029867] N82-11245
Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-225979] N82-11275
ETHYLENE
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11879
EUCLIDEAN GEOMETRY
Special functions and harmonic analysis on P sub n N82-11824
EUROPE
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637
EVALUATION
Analysis of 4&5 data — program evaluation
[AD-A104249] N82-11804
EVAPORATION RATE
Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429
EVAPORATIVE COOLING
Magma Cooling-Tower process pilot-plant demonstration
[DE81-903763] N82-11406
Meteorological Effects of Thermal Energy Releases (METER) program
[DE81-030431] N82-11640
EVAPOTRANSPIRATION
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219610] N82-11734
EVOLUTION (DEVELOPMENT)
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations N82-11685
EXCIMER LASERS
Direct observation of excited oxygen atom production and deactivation N82-11868
EXCITATION
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11984
EXHAUST EMISSION
Informational report on the measurement and characterization of diesel exhaust emissions
[PB81-221251] N82-11175
Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11651
Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222620] N82-11653
Evaluation of exhaust emissions data for diesel engines used in underground mines
[PB81-225377] N82-11673
FGDIS primer: Major equipment/component classifications, problem/solution access codes, and definitions related to FGD systems as contained in the Flue Gas Desulfurization Information System (FGDIS)
[PB81-225846] N82-11985
Evaluation of the micro-carburetor
[NASA-CR-164958] N82-11994
EXHAUST GASES
Liquid-liquid chromatography fractionation of organic compounds in complex mixtures: Application to automobile exhaust
[DE81-030743] N82-11650
EPA utility FGD (Flue Gas Desulfurization) survey
[PB81-225773] N82-11679
Selected studies of four high-temperature air-pollution sources N82-11680
EXISTENCE THEOREMS
Recursive aspects of the theory of real closed fields N82-11849
EXPANSION
Design of airport pavements for expansive soils
[AD-A104690] N82-11313
EXPERIMENTAL DESIGN
A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen N82-11026
LLNL underground coal gasification project
[DE81-030634] N82-11287
EXPLODING WIRES
AC firing ability of detonation
[PB81-216063] N82-11272
Computer modeling of an all-secondary explosive hot-wire device
[DE81-030436] N82-11439
EXPLORATION
Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030665] N82-11523
EXPLOSIVE FORMING
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220
EXPLOSIVES
Shock-induced organic chemistry
[DE81-024442] N82-11115
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-028594] N82-11162
Development of inverse Raman spectroscopy for probing rapidly decomposing explosives and propellants
[AD-A104362] N82-11226
Correlation of shock-initiation tests for explosives and propellants
[DE81-026533] N82-11254
Hot-spot initiation of heterogeneous explosives
[DE81-027601] N82-11266
EXPOSURE
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780
EXTRATERRESTRIAL RESOURCES
Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11989

F

F-18 AIRCRAFT
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104622] N82-11136
FABRICATION
Side impact sled and padding development
[PB81-217952] N82-11092
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220
Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365
Heat-pipe development for high-temperature recuperator application
[LA-UR-81-1414] N82-11426
Lasers in materials processing
[DE81-027657] N82-11480
Solar cell development for the power extension package
[NASA-TM-82685] N82-11551
Low-cost solar flat-plate-collector development
[DE81-025061] N82-11584
Advanced development of electrical-energy-storage components for high reliability applications
[DE81-025384] N82-11591
Design and fabrication of quadrupole ion mass spectrometer for upper atmosphere
[AD-A104319] N82-11705
The Crosstie Random Access Memory (CRAM). Part 1: The concept and initial studies
[AD-A104543] N82-11788
FAILURE ANALYSIS
Failure analysis of a tool steel torque shaft
[NASA-TM-82758] N82-11184
Traveling-wave maser, closed cycle refrigerator automation N82-11294
Minimizing the time to troubleshoot a failed system N82-11296
Vibration signature analysis and acoustic-emission monitoring at Brayton Point
[DE81-904232] N82-11507
Failure mechanism study of GaAs technology
[AD-A104440] N82-11963

FAILURE MODES

On-line failure detection of vibrating structures
[UCRL-86099] N82-11505

Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972

FALLOUT

Environmental Monitoring Report, Sandia National Labs., Albuquerque, New Mexico, 180
[DE81-027639] N82-11649

Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline
[PB81-212037] N82-11656

FAR INFRARED RADIATION

Far-infrared measurements of trace gases
[NASA-CR-164965] N82-11696

FAR ULTRAVIOLET RADIATION

Testing of a spacecraft model in a combined environment simulator
[NASA-TM-82723] N82-11106

FARADAY EFFECT

Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027296] N82-11462

SMMR data set development for GARP — impact of cross polarization and Faraday rotation on SMMR derived brightness temperatures
[NASA-CR-166721] N82-11512

Plasmaspheric, faraday and total electron contents, 1977 and 1978
[AD-A104362] N82-11700

FAST FOURIER TRANSFORMATIONS

Digital SAR processing using a fast polynomial transform N82-11295

FAST NEUTRONS

Improved calculations of energy deposition from fast neutrons
[DE81-025365] N82-11685

FATIGUE (MATERIALS)

Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2056] N82-11487

FATIGUE LIFE

Conductor fatigue-life research
[DE81-904209] N82-11369

Strength behaviour of fatigue cracked lugs — stress intensity and crack propagation characteristics
[RAE-LIB-TRANS-2057] N82-11486

FEASIBILITY ANALYSIS

Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240

Peat biogasification development program
[DE81-026299] N82-11243

Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-226979] N82-11275

Comparisons of some large scientific computers
[NASA-TM-81926] N82-11817

FEEDBACK CONTROL

Design techniques for multivariable flight control systems N82-11078

Practical design and realization of a digital adaptive flight control system N82-11079

FERMENTATION

Cattail rhizome-derived alcohol
[DE81-026307] N82-11234

FERMI SURFACES

Electronic structure and many-body effects in Pd
[DE81-023110] N82-11970

FERRITES

Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029646] N82-11192

FERROMAGNETIC MATERIALS

Detection of vibrations in metallic structures using small passive magnetic fields
[AD-A104405] N82-11495

FIBER COMPOSITES

The industrial processing of unidirectional fiber prepregs
[NASA-TM-76599] N82-11119

Detection of acoustic emission in composites by optical fiber interferometry N82-11125

SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615

FIBER OPTICS

Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11084

Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121

Optical fiber interferometer for the study of ultrasonic waves in composite materials, discussion
N82-11122

Detection of ultrasonic waves in solids by an optical fiber interferometer N82-11123

DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124

Detection of acoustic emission in composites by optical fiber interferometry N82-11125

Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127

Characterization of metal-polymer boundaries using Stoneley and Leaky waves N82-11128

Optical detection of pulsed surface particle displacements N82-11131

Wideband optical measurements of ultrasonic pulses N82-11132

Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133

Physical characterization of electronic materials
[AD-A104494] N82-11135

Local distribution fiber optic cable communication system
[AD-A104491] N82-11911

Single mode optical waveguide design investigation
[AD-A104584] N82-11913

Improvements to a high-frequency fiber-optic system for plasma diagnostics
[DE81-028741] N82-11919

Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920

FIBER ORIENTATION

The industrial processing of unidirectional fiber prepregs
[NASA-TM-76599] N82-11119

FIBER REINFORCED COMPOSITES

Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116

FIELD EFFECT TRANSISTORS

Low noise tuned amplifier
[NASA-CASE-GSC-12567-1] N82-11359

Low temperature growth and electrical characterization of insulators for GaAs MISFETS
[NASA-CR-164972] N82-11959

Failure mechanism study of GaAs technology
[AD-A104440] N82-11963

FIELD STRENGTH

Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104

FIELD THEORY (ALGEBRA)

Recursive aspects of the theory of real closed fields N82-11849

FIELD THEORY (PHYSICS)

Physics in few dimensions — condensed matter physics
[DE81-026054] N82-11853

Classical field theory with Z(3) symmetry
[DE81-027069] N82-11969

FILLERS

The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11206

FILTRATION

Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149

FINANCIAL MANAGEMENT

Unique characteristics of financing science in the USSR
[PB81-212243] N82-11980

FINITE DIFFERENCE THEORY

Some observations on a new numerical method for solving Navier-Stokes equations
[NASA-TP-1934] N82-11032

Development of prediction method for transonic shock induced separated flow
[AD-A104666] N82-11403

Analyses of ductile flow and fracture in two dimensions
[DE81-023651] N82-11506

Upwind difference schemes for hyperbolic systems of conservation laws N82-11820

FINITE ELEMENT METHOD

Electromagnetic scattering by targets over a real Earth
[AD-A104492] N82-11347

Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498

Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499

Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500

Finite element analysis of the split Hopkinson bar
[DE81-030387] N82-11503

On the computation of barotropic tides in deep estuaries with application to Knight Inlet, British Columbia
[PB81-220147] N82-11754

SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816

A two-step approach to finite element ordering
[AD-A104320] N82-11827

Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851

FIR FILTERS

Constrained adaptive least mean squared filters
[AD-A104625] N82-11830

FIRE FIGHTING

Firefighting module development
[NASA-TM-82444] N82-11311

FISSION PRODUCTS

KUGEL: A thermal, hydraulic, fuel performance and gaseous fission product release code for pebble bed reactor core analysis
[DE81-026561] N82-11904

Decay heat curve evaluation test
[DE81-027181] N82-11976

FITTING

RATFIT: A rational equation-of-state fitting program
[DE81-027273] N82-11812

FIXED POINTS (MATHEMATICS)

Distributed computation of fixed points
[AD-A104418] N82-11791

FLAME PROPAGATION

The effects of gaseous atmospheres on the performance characteristics of aluminum-sodium nitrate flares
[AD-A104363] N82-11227

FLAME RETARDANTS

The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11206

FLAME SPECTROSCOPY

Detection of oil in water by a flame emission technique
[PB81-226185] N82-11176

FLAME STABILITY

Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028

FLAME TEMPERATURE

Soot formation in synfuels
[DE81-030273] N82-11164

FLANGES

Clamp-mount device
[NASA-CASE-MFS-25510-1] N82-11470

FLAT PLATES

A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026

Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-026174] N82-11560

Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-029176] N82-11561
Low-cost solar flat-plate-collector development
[DE81-026081] N82-11564

FLEXIBLE BODIES
Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164971] N82-11099

FLEXIBLE SPACECRAFT
Control design of flexible spacecraft N82-11081

FLIGHT CHARACTERISTICS
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051

FLIGHT CONDITIONS
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051
Evaluation of photogrammetric flight under icing conditions on March 23, 1978
[NASA-TM-78617] N82-11725

FLIGHT CONTROL
Flight trajectory control investigation
[AD-A104642] N82-11046
Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11065
Design considerations for optimal flight control systems N82-11077
Design techniques for multivariable flight control systems N82-11078
Practical design and realization of a digital adaptive flight control system N82-11079
Control law design for transport aircraft flight tasks N82-11080
Management of redundancy in flight control systems using optimal decision theory N82-11084

FLIGHT OPTIMIZATION
Optimum climb and descent trajectories for airline missions N82-11082

FLIGHT PATHS
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018

FLIGHT SIMULATION
Multiple-instruction, multiple-data path computers: Parallel processing impact on flight simulation software
[AD-A104506] N82-11789
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797
Second Image Generation/Display Conference: Closing comments — flight simulators
[AD-A104676] N82-11807

FLIGHT SIMULATORS
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091

FLIGHT TEST INSTRUMENTS
Outsider's look at flight instrumentation
[DE81-025409] N82-11066

FLIGHT TESTS
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797

FLIGHT TRAINING
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091

FLOOD PREDICTIONS
A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530

FLOODS
Rainfall-runoff modeling and preliminary regional flood characteristics of small rural watersheds in the Arkansas river basin in Colorado
[PB81-224313] N82-11667
Equipment for flood and flash flood warning systems
[PB81-224131] N82-11749

FLOORS
Seismic resistance characteristics of reinforced concrete beam-supported floor slabs in building structures: Contribution of floor systems to earthquake resistance of building structural frames
[PB81-219172] N82-11326

FLORIDA
Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Foridian aquifer
[PB81-225518] N82-11529

FLOW CHARACTERISTICS
Analytical and experimental study of flow phenomena in noncavitating rocket pump inducers
[NASA-CR-3471] N82-11031
Novel improved PMR polyimides
[NASA-TM-82733] N82-11117
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11156
Chemorheology and quality control for an adhesive
[AD-A104556] N82-11215
Acta Mechania Sinica
[AD-A105635] N82-12021
Numerical computation and analysis of the flow field in a large shock tube with a variable cross-sectional area N82-12026

FLOW DIRECTION INDICATORS
Directional flow sensor
[NASA-CASE-FRC-11074-1] N82-11436

FLOW DISTORTION
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction .
[NASA-TP-1902] N82-11391

FLOW DISTRIBUTION
Some features of flow past slotted wings
[RAE-LIB-TRANS-2050] N82-11030
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036
A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-8109] N82-11037
Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-8110] N82-11038
A comparison of theoretical and experimental pressure distributions for two advanced fighter wings
[NASA-TM-81331] N82-11054
Static continuous electrophoresis device
[NASA-CASE-MFS-25306-1] N82-11147

FLOW EQUATIONS
Computation of high Reynolds number internal/external flows
[NASA-TM-84049] N82-11046
A second-order accurate procedure for solving the boundary layer equations based on the predictor-corrector form of the Crank-Nicolson Scheme
[NAL-TR-655] N82-11626

FLOW GEOMETRY
Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395
Mean values and an inverse problem for porous media flow
[DE81-027210] N82-11411

FLOW MEASUREMENT
Portable transfer standards for pressure and gas flow measurements
[DE81-024445] N82-11409

FLOW STABILITY
Shear flow instabilities in a rotating system N82-11388

FLOW VELOCITY
Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11026
Wind tunnel supplementary Mach number minimum section insert
[NASA-CASE-LAR-12632-1] N82-11066
Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149
Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533
Mechanistic analysis of loft pulsed neutron activation data — pipe flow velocity
[DE81-027124] N82-11876

FLOW VISUALIZATION
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013
Acta Mechania Sinica
[AD-A105635] N82-12021
On the capacity of holographic phase-shift interferometric technique in the visualization of low density flows N82-12024

FLOWMETERS
Advanced fuel flowmeter for future naval aircraft
[AD-A104364] N82-11063
Calibration of a laminar flowmeter: The data and correlations
[DE81-025227] N82-11441
Calibration of a laminar flowmeter
[DE81-024423] N82-11442

FLUES
EPA utility FGD (Flue Gas Desulfurization) survey
[PB81-225773] N82-11679

FLUID DYNAMICS
Diffusivity of particles moving rapidly through a turbulent fluid
[DE81-030414] N82-11406
Acta Mechania Sinica
[AD-A105635] N82-12021
Difference method in fluid dynamics. 1. Numerical solution of two dimensional vorticity equation N82-12022

FLUIDIZED BED PROCESSORS
Fluidized bed coal combustion reactor
[NASA-CASE-NPO-14273-1] N82-11144
Assessment of advanced coal gasification processes
[NASA-CR-164949] N82-11146
Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030282] N82-11151
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
Surface coal gasification
[DE81-030183] N82-11253
Lewis Research Center's coal-fired, pressurized, fluidized-bed reactor test facility
[NASA-TM-81616] N82-11397
Fluid-bed heat-exchanger optimization and bed materials selection
[DOE/ET-11343/T2] N82-11571

FLUORESCENCE
Vibrational sensitization of of 14N14NO, 15N14NO and H2O by laser excited SF6 N82-11143
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758
Molecular spectroscopy and relaxation in supersonic beams N82-11867

FLUSHING
Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11660

FLUTTER
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034

FLUTTER ANALYSIS
An influence coefficient method for the application of the modal technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070

FLUX (RATE)
Source-to-incident-flux relation in a Tokamak blanket module
[DE81-026524] N82-11941
Preliminary activation calculations for the poloidal divertor experiment
[DE81-026525] N82-11942

FLUX DENSITY
High energy density capacitor testing for the AFWL SHIVA
[DE81-023666] N82-11379

FLUX QUANTIZATION
Bounded limit for the Monte Carlo point-flux-estimator
[DE81-026526] N82-11883

FLYING PLATFORMS
Parametric study of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050
FLYWHEELS
Mechanical Energy Storage Technology (MEST) development
[DE81-026800] N82-11596
Assessment of flywheel system benefits in selected vehicle applications
[DE81-025976] N82-11997
FOAMS
Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209
FOCUSING
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226813] N82-11625
FOG
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104595] N82-11729
FOLDING STRUCTURES
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093
Standard specification for light ladders
[SABS-1304-1980] N82-11277
Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11483
FORECASTING
Correlation methods
[DE81-025379] N82-11598
US energy strategies: Some options for eliminating oil imports by the year 2000
[PB81-226052] N82-11626
Prediction, diagnosis, and causal thinking in forecasting
[AD-A104372] N82-11843
FORMALISM
OBJ-1: A study in executable algebraic formal specification
[AD-A104468] N82-11803
Programming with a relational calculus
[AD-A104650] N82-11809
Sensitivity theory for nonlinear systems. 2: Extensions to additional classes of responses
[DE81-030258] N82-11845
FORMAT
The effects of the symbology and spatial arrangement of software specifications in a debugging task
[AD-A104541] N82-11806
FORTRAN
RATFIT: A rational equation-of-state fitting program
[DE81-027273] N82-11812
KUGEL: A thermal, hydraulic, fuel performance and gaseous fission product release code for pebble bed reactor core analysis
[DE81-026561] N82-11904
FOSSIL FUELS
Computational tools for pulverized-coal combustion
[DE81-026582] N82-11146
Preliminary evaluation of advanced coal-based electricity-generating technologies by means of system-integration analysis
[DE81-029669] N82-11573
Survey of particulate emission macro- and micro-sampling and sizing methods
[DE81-026346] N82-11642
Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-026503] N82-11644
FOUNDATIONS
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Evaluation of base courses for flexible pavements
[PB81-216372] N82-11329
Bearing capacity and characterization of compressible Clayey and Silty Foundation soils in Oklahoma
[PB81-231607] N82-11330
FOURIER ANALYSIS
Fourier analysis of broadband, low-level signals using switched inputs
[AD-A104568] N82-11353
Modal analysis using a Fourier analyzer, curve-fitting, and modal tuning
[NASA-CR-161886] N82-11490
On the computation of barotropic tides in deep estuaries with application to Knight Inlet, British Columbia
[PB81-220147] N82-11754
FOURIER TRANSFORMATION
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150
Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925
FRACTIONATION
Liquid-liquid chromatography fractionation of organic compounds in complex mixtures: Application to automobile exhaust
[DE81-030743] N82-11650
FRACTOGRAPHY
Hydrogen damage in stainless steel
[DP-MS-81-31] N82-11197
FRACTURE MECHANICS
Crack arrest properties of a 9 percent nickel cryogenic steels
[PB81-227993] N82-11202
Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209
Strength behaviour of fatigue cracked lugs — stress intensity and crack propagation characteristics
[RAE-LIB-TRANS-2057] N82-11486
Analyses of ductile flow and fracture in two dimensions
[DE81-023651] N82-11506
FRACTURE STRENGTH
Crack arrest properties of a 9 percent nickel cryogenic steels
[PB81-227993] N82-11202
Engineering approach for elastic-plastic fracture analysis
[DE81-904216] N82-11502
FRACTURES (MATERIALS)
Engineering approach for elastic-plastic fracture analysis
[DE81-904216] N82-11502
FRACTURING
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494
FREE ELECTRON LASERS
Two-dimensional theory and simulation of free electron lasers
[DE81-025365] N82-11461
FREE JETS
Impinging jets
[PB81-227902] N82-11392
FREEZING
Evaluation of photogrammetric flight under icing conditions on March 23, 1978
[NASA-TM-78617] N82-11725
FREQUENCY STABILITY
An error budget for the JPL hydrogen maser receiver N82-11297
Removal of drift from frequency stability measurements N82-11298
Low temperature quartz crystal oscillator fast warm-up saw oscillator
[AD-A104403] N82-11368
Theoretical analysis of effect of Langmuir flow in ring laser N82-11447
FREQUENCY STANDARDS
An error budget for the JPL hydrogen maser receiver N82-11297
Removal of drift from frequency stability measurements N82-11298
FRESNEL REFLECTORS
Secondary and compound concentrators for parabolic dish solar thermal power systems
[NASA-CR-164960] N82-11550
FRONTS (METEOROLOGY)
Frontogenesis in the planetary boundary layer of an amplifying, two-dimensional baroclinic wave
N82-11721
FUEL CELLS
Rechargeable molten-salt cells
[DE81-027091] N82-11595
FUEL COMBUSTION
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11261
Third automotive fuel economy research contractors coordination meeting
[PB81-222754] N82-11627
Assessment of hazard potential from combustion of wastes in industrial boilers
[PB81-221889] N82-11656
FUEL CONSUMPTION
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018
EPA evaluation of the FUEL-MAX device under Section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-229866] N82-11479
EPA evaluation of the Automotive Cylinder Deactivator System (ACDS) under Section 511 of the Motor Vehicle Information and Cost Saving Act
[PB81-228256] N82-11480
Evaluation of the micro-carburetor
[NASA-CR-164958] N82-11994
FUEL FLOW
Transport characteristics of alternate slurry fuels
[DE81-028580] N82-11255
FUEL GAGES
Advanced fuel flowmeter for future naval aircraft
[AD-A104364] N82-11063
FUEL OILS
Studies for the stabilization of coal-oil mixtures
[DOE/ET-10746/T1] N82-11156
Detection of oil in water by a flame emission technique
[PB81-226185] N82-11178
Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11261
FUEL PRODUCTION
Advanced system experimental facility: Solid waste to methane gas. Background and process description
[DE81-030196] N82-11244
Fusion as a source of synthetic fuels
[BNL-29281] N82-11257
Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274
Engineering challenges of fusion-reactor development
[DE81-024129] N82-11907
FUEL SYSTEMS
Firefighting module development
[NASA-TM-82444] N82-11311
FUELS
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260
FUNCTIONAL ANALYSIS
Sensitivity theory for nonlinear systems. 2: Extensions to additional classes of responses
[DE81-030258] N82-11845
FUNCTIONS (MATHEMATICS)
A theoretical and experimental investigation of the photometric functions of particulate surfaces
N82-12012
FURLABLE ANTENNAS
Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164971] N82-11099
FURNACES
Space processing of electronic materials — determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161862] N82-11094
FUSES (ORDNANCE)
AC firing ability of detonation
[PB81-216053] N82-11272

The deconvolution of aerosol backscattered optical pulses to obtain system-independent aerosol signatures
[AD-A104678] N82-11914

FUSION REACTORS

Engineering challenges of fusion-reactor development
[DE81-024129] N82-11907

Calculation procedures for the analysis of integral experiments for fusion-reactor design
[DE81-027626] N82-11949

G

GALACTIC RADIATION

The isotopic composition of the elements carbon, oxygen, neon, magnesium and silicon in the galactic cosmic rays
[NASA-CR-166716] N82-12019

GALLIUM ARSENIDE LASERS

InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452

GALLIUM ARSENIDES

Low temperature growth and electrical characterization of insulators for GaAs MISFETS
[NASA-CR-164972] N82-11959

Failure mechanism study of GaAs technology
[AD-A104440] N82-11963

Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972

GAMMA RAY ASTRONOMY

X-ray and gamma-ray observations of pulsed emission from radio pulsars N82-12000

GAMMA RAY LASERS

Theoretical investigations into possible X-ray and gamma-ray lasers N82-11445

GAMMA RAY SPECTRA

Decay heat curve evaluation test
[DE81-027181] N82-11976

GAMMA RAYS

Standard specification for apparatus for gamma radiography
[SABS-1317-1980] N82-11423

Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

GANYMEDE

The morphology and evolution of Ganymede and Callisto N82-12013

GAS ANALYSIS

Proof of concept study
[AD-A104338] N82-11639

Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11689

GAS CHROMATOGRAPHY

Development and optimization of methodologies for analysis of complex hydrocarbon mixtures
[DE81-025875] N82-11114

The use of lanthanide chelates as selective complexing sorbents for gas chromatography
N82-11139

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166

GAS COMPOSITION

Evaluation of exhaust emissions data for diesel engines used in underground mines
[PB81-225377] N82-11673

Far-infrared measurements of trace gases
[NASA-CR-164966] N82-11696

GAS COOLING

A new method of cooling turbine vanes
N82-11027

GAS DENSITY

One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-85867] N82-11940

GAS EVOLUTION

Outgassing of two synthetic fuels
[AD-A104680] N82-11231

GAS FLOW

Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024

Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248

Portable transfer standards for pressure and gas flow measurements
[DE81-024445] N82-11409

Directional flow sensor
[NASA-CASE-FRC-11074-1] N82-11436

Theoretical analysis of effect of Langmuir flow in ring laser N82-11447

GAS INJECTION

Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248

GAS JETS

Gas-jet laser-plasma interaction experiments
[DE81-027169] N82-11943

GAS LASERS

Analytical description of time characteristics high power laser pulses N82-11449

GAS MASERS

An error budget for the JPL hydrogen maser receiver N82-11297

Removal of drift from frequency stability measurements N82-11298

GAS PRESSURE

Portable transfer standards for pressure and gas flow measurements
[DE81-024445] N82-11409

GAS RECOVERY

Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-026600] N82-11247

Gas recovery from coal deposits
[PB81-222291] N82-11271

Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309]. N82-11667

GAS TRANSPORT

Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654

GAS TURBINE ENGINES

A new method of cooling turbine vanes
N82-11027

GAS TURBINES

Trends in high temperature gas turbine materials
[NASA-TM-82715] N82-11182

Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11261

Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654

GAS-METAL INTERACTIONS

Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140

Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11196

Hydrogen damage in stainless steel
[DP-MS-81-31] N82-11197

GASIFICATION

Peat biogasification development program
[DE81-026299] N82-11243

Transportation fuels from synthetic gas
[DE81-029614] N82-11258

Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274

Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222804] N82-11655

GASOHOL (FUEL)

Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-226979] N82-11275

GENERAL AVIATION AIRCRAFT

General aviation aircraft antennas for the global positioning system
[NASA-TM-83212] N82-11339

GEOCHEMISTRY

Geochemical controls on trace metal transport in aqueous environmental systems N82-11631

A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669

GEOCHRONOLOGY

COCORP traverses in Wyoming and Oklahoma
N82-11684

Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691

GEODESY

Hotspots, polar wander, Mesozoic convection and the geoid
[NASA-CR-164943] N82-11694

Report on research at AFGL
[AD-A104513] N82-11704

Military geodesy and geospace science, unit three
[AD-A106072] N82-11711

GEOIDS

Hotspots, polar wander, Mesozoic convection and the geoid
[NASA-CR-164943] N82-11694

GEOLOGICAL FAULTS

Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas -- Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

GEOLOGY

Hotspots, polar wander, Mesozoic convection and the geoid
[NASA-CR-164943] N82-11694

Evaluation of uncertainties in geologic information
[DE81-025997] N82-11714

Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11718

GEOMAGNETISM

Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] N82-11103

Geomagnetic observations N82-11693

GEOMETRICAL OPTICS

Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920

GEOMETRY

Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11680

GEOPHYSICS

Report on research at AFGL
[AD-A104513] N82-11704

GEOPRESSURE

Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

GEOTECHNICAL ENGINEERING

Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-904014] N82-11520

GEOTEMPERATURE

Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11416

GEOTHERMAL ENERGY CONVERSION

Analysis of thermal/mechanical energy-conversion concepts
[DE81-027854] N82-11585

GEOTHERMAL ENERGY EXTRACTION

Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521

Relaxation of geothermal-reservoir stresses induced by heat production
[DE81-032024] N82-11715

Geothermal environmental assessment baseline study: Vegetation and soils of the Roosevelt Hot Springs geothermal resource area
[PB81-223299] N82-11717

GEOTHERMAL ENERGY UTILIZATION

Geothermal heat transfer, district heating and cooling
[DE81-023195] N82-11587

GEOTHERMAL RESOURCES

Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149

Two-phase flow in geothermal energy sources
[DE81-029037] N82-11404

Is geothermal simulation a catastrophe?
[DE81-026750] N82-11586

Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671

GERT
Methods for presentation and display of multivariate data
[NASA-CR-165788] N82-11633

GIBBS FREE ENERGY
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

GLACIOLOGY
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532

GLASS
Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209
Manganese glass-molybdenum metallized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11218
Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456

GLASS FIBER REINFORCED PLASTICS
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[NASA-TM-81746] N82-11211

GLOBAL ATMOSPHERIC RESEARCH PROGRAM
SMMR data set development for GARP — impact of cross polarization and Faraday rotation on SMMR derived brightness temperatures
[NASA-CR-166721] N82-11512

GLOBAL POSITIONING SYSTEM
General aviation aircraft antennas for the global positioning system
[NASA-TM-83212] N82-11339

GOALS
Information of mission and functions of the National Bureau of Standards
[PB81-226207] N82-11761

GOVERNMENT PROCUREMENT
Civil servants and contract employees: Who should do what for the Federal Government
[PB81-219966] N82-11979

GRADIENTS
Optical transparency of inexpensive salt solutions for construction of density-gradient ponds
[DE81-030632] N82-11559
The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

GRAIN BOUNDARIES
Hot-spot initiation of heterogeneous explosives
[DE81-027801] N82-11266
Thin-film polycrystalline silicon solar cells: Progress and problems
[DE81-025704] N82-11606
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973

GRAND TOURS
Virtual center arraying N82-11287

GRANULAR MATERIALS
Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027559] N82-11504

GRAPHITE
Novel improved PMR polyimides
[NASA-TM-82733] N82-11117
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229992] N82-11780
Coated-limiter testing in Tokamaks
[DE81-027666] N82-11951

GRAPHITE-EPOXY COMPOSITE MATERIALS
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104822] N82-11136

GRAVIMETRY
Principal facts, accuracies, sources, base station descriptions, and plots for 1380 gravity stations in the Tonopah 1 deg by 2 deg Quadrangle, Nevada
[PB81-219081] N82-11716

GRAVITATIONAL EFFECTS
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161881] N82-11958

GRAVITY ANOMALIES
Principal facts, accuracies, sources, base station descriptions, and plots for 1380 gravity stations in the Tonopah 1 deg by 2 deg Quadrangle, Nevada
[PB81-219081] N82-11716

GREAT LAKES (NORTH AMERICA)
Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline
[PB81-212037] N82-11656

GREAT PLAINS CORRIDOR (NORTH AMERICA)
Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524
Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525

GROUND STATE
Direct observation of excited oxygen atom production and deactivation N82-11866

GROUND STATIONS
A dedicated 26-m SETI sky survey instrument facility: A feasibility study N82-11281
DSN ground communication facility N82-11282
Networks consolidation program N82-11283
Relocation of the Deep Space Network Maintenance Center N82-11305
Goldstone high power radiation control N82-11308

GROUND SUPPORT EQUIPMENT
NOCA upgrade N82-11304

GROUND WATER
LLNL underground coal gasification project
[DE81-030634] N82-11267
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270
Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521
Water resources data for Kentucky, water year 1980
[PB81-223612] N82-11526
Water resources data for Michigan, water year 1980
[PB81-224180] N82-11527
Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528
Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Foridian aquifer
[PB81-225518] N82-11529
Water resources of upper separation creek basin, south-central Wyoming
[PB81-224263] N82-11531

GUARDS (SHIELDS)
Performance assessments of precipitation gages for snow measurement
[PB81-216547] N82-11443

GUATEMALA
Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164931] N82-11514

GUST LOADS
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

H

H ALPHA LINE
H-alpha emission from a disk in the close binary U Cephei: A Monte Carlo simulation N82-12001

HALF LIFE
A review and interpretation of recent cosmic ray beryllium isotope measurements
[NASA-CR-164967] N82-12020

HALLEY'S COMET
Telecommunications in cometary environments
[NASA-CR-164958] N82-11340

HARDENING (MATERIALS)
Effects of alloying on aging and hardening processes of steel with 20% nickel
[NASA-TM-76624] N82-11186
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104868] N82-11213

HARMONIC ANALYSIS
Special functions and harmonic analysis on P sub n N82-11824
Acoustic cavitation studies
[AD-A104409] N82-11863

HAWAII
Possible use of coal in Hawaii, 1980 - 2000
[DE81-028266] N82-11263
Hawaii mesoscale energy and climate project (HAMEC). 2: P-3 aircraft data sets
[PB81-224198] N82-11747

HAZARDS
Coal mine hazard detection using synthetic pulse radar
[PB81-224412] N82-11538

HEAD-UP DISPLAYS
Study and development of an integrated head-up display
[AD-A104337] N82-11062

HEART
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766

HEAT CAPACITY MAPPING MISSION
Thermal algorithms analysis — programming tasks supporting the development of a thermal model of the Earth's surface
[NASA-CR-166716] N82-11800

HEAT EXCHANGERS
A new method of cooling turbine vanes N82-11027
Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025483] N82-11193

HEAT OF FORMATION
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

HEAT PIPES
High thermal power density heat transfer — thermionic converters
[NASA-CASE-LEW-12950-1] N82-11399
Performance predictions and measurements for space-power-system heat pipes
[LA-UR-81-909] N82-11426
Performance limits of gravity-assist heat pipes with simple wick structures
[LA-UR-81-969] N82-11427
Heat-pipe development for high-temperature recuperator application
[LA-UR-81-1414] N82-11429

HEAT PUMPS
Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030705] N82-11405
Parametric sensitivity study for solar-assisted heat-pump systems
[DE81-030309] N82-11407
Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412
DOE solar-assisted heat-pump program: Its evolution and its potential
[DE81-026055] N82-11413
Chemical heat pump program: An overview
[DE81-025086] N82-11414
Computer-aided heat-pump design and optimization
[DE81-024965] N82-11415
Laboratory determination of frosting and defrosting losses for a high efficiency air-source heat pump
[DE81-023218] N82-11416
Alternative heat pump cycle studies
[DE81-024983] N82-11417
Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11418

Well-water-source heat pump field performance study
[DE81-024136] N82-11419
Conduct a state-of-the-art survey of existing knowledge for the design of ground-source heat pumps
[DE81-024064] N82-11420
Heat pump R and D at Oak Ridge National Laboratory
[DE81-024121] N82-11422
Diaphragm Stirling engine heat-actuated heat pump development
[DE81-024076] N82-11423
Development and demonstration of an ammonia-water absorption heat pump
[DE81-024128] N82-11424
Brayton/Rankine 10-ton gas-fired space conditioning system, phase 2
[PB81-223372] N82-11478
Solar heat pump simulator
[DE81-024368] N82-11583
Light-commercial Brayton/Rankine space-conditioning system
[DE81-024137] N82-11586

HEAT RESISTANT ALLOYS
Materials technology for coal-conversion processes
[DE81-028474] N82-11169
The quantitative determination of non-metallic inclusions by a mathematical statistical method
[RAE-LIB-TRANS-2066] N82-11179
Trends in high temperature gas turbine materials
[NASA-TM-82716] N82-11182
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11188
Irradiation-induced swelling in commercial alloys
[DE81-029755] N82-11191

HEAT SHIELDING
Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025626] N82-11474

HEAT SOURCES
Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11416
Space nuclear safety and fuels program
[DE81-030501] N82-11891

HEAT STORAGE
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4703-26] N82-11501
Hodges residence: Performance of a direct gain passive solar home in Iowa
[DE81-025528] N82-11581
Controls for solar heating and cooling
[DE81-025209] N82-11593
Attached sunspace design analysis
[DE81-029736] N82-11601
Heat storage duration
[DE81-026636] N82-11602

HEAT TRANSFER
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
Studies of heat transfer and water migration in soils
[DE81-023961] N82-11425
Fluid-bed heat-exchanger optimization and bed materials selection
[DOE/ET-11343/T2] N82-11571
Geothermal heat transfer, district heating and cooling
[DE81-023195] N82-11587
Meridional heat transport at the onset of winter stratospheric warming
[NASA-TM-76614] N82-11697
Jet impingement heat transfer enhancement for the GPU-3 Stirling engine
[NASA-TM-82727] N82-11993

HEAT TRANSMISSION
Performance limits of gravity-assist heat pipes with simple wick structures
[LA-UR-81-969] N82-11427
Imperfect magnetosphere-ionosphere coupling and discrete aurorae
[AD-A104309] N82-11699

HEATING
Geothermal heat transfer, district heating and cooling
[DE81-023195] N82-11587

HEATING EQUIPMENT
Ice protection system technology N82-11060
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165091] N82-11224
Energy analysis sample building data
[DE81-027186] N82-11318
Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412

HEAVY IONS
Bragg curve spectroscopy
[DE81-026627] N82-11161
Heavy ion fusion program at Argonne
[DE81-023905] N82-11902
Heavy ion beam interaction and energy partition in the initial stages of ICF target irradiation
[DE81-025296] N82-11903

HEIGHT
A simplified procedure for direct determination of real heights from virtual height data
[AD-A104374] N82-11702
The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

HELICOPTER CONTROL
Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11064
Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11065

HELICOPTERS
Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056
Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11659

HELIOSTATS
Heliostat operation at the central receiver test facility (1978 - 1980)
[DE81-031926] N82-11556
Second generation heliostat, volume 1
[DE81-029618] N82-11564
Second generation heliostat. Volume 2: Definition of a heliostat manufacturing facility
[DE81-029624] N82-11565
Second generation heliostat program, September 1979-March 1981
[DE81-029752] N82-11570
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226613] N82-11625

HERMETIC SEALS
Semiconductor measurement technology ARPA/NBS Workshop Moisture Measurement Technology for Hermetic Semiconductor Devices
[PB81-220733] N82-11364

HETERODYNING
Large gain, negative resistance, and oscillations in superconducting quasiparticle heterodyne mixers
[AD-A104534] N82-11361

HETEROJUNCTION DEVICES
InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452

HETEROJUNCTIONS
Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025587] N82-11577

HIGH ASPECT RATIO
The comparison between the unsteady pressure fields calculated and measured on the ZKP model
[RAE-LIB-TRANS-2061] N82-11029

HIGH CURRENT
Energy losses in conductors carrying very high currents
[DE81-025367] N82-11373

HIGH ENERGY INTERACTIONS
Role of excited states of molecular ions in structure studies with high-energy collisions
[DE81-023696] N82-11881
Detection and study of new heavy particles through jet identification
[DE81-025151] N82-11882

HIGH POWER LASERS
Analytical description of time characteristics of high power laser pulses N82-11448
Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029600] N82-11458
Nova pulse power system description and status
[DE81-025600] N82-11898

HIGH PRESSURE
Performance of a 100-kV, 78kJ electric-gun system
[DE81-025603] N82-11374
JT8D high pressure compressor performance improvement
[NASA-CR-165531] N82-11467
High-pressure optical studies
[DE81-025577] N82-11918

HIGH STRENGTH STEELS
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12269] N82-11195

HIGH TEMPERATURE
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11158
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-904206] N82-11217
High thermal power density heat transfer — thermionic converters
[NASA-CASE-LEW-12950-1] N82-11399
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029661] N82-11576

HIGH TEMPERATURE ENVIRONMENTS
High-temperature enthalpy and X-ray powder diffraction data for aluminum sulfide (Al2S)
[PB81-226250] N82-11174
Heat-pipe development for high-temperature recuperator application
[LA-UR-81-1414] N82-11428

HIGH TEMPERATURE GASES
Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11261
Selected studies of four high-temperature air-pollution sources N82-11680

HIGH TEMPERATURE RESEARCH
Adaptation of a turbine test facility to high-temperature research
[RAE-LIB-TRANS-2064] N82-11069
Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76608] N82-11120

HIGH VOLTAGES
High-voltage air-core pulse transformers
[DE81-030999] N82-11370

HOLDERS
Scriber for silicon wafers
[NASA-CASE-NPO-15539-1] N82-11469

HOLLOW CATHODES
Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11886

HOLOGRAPHIC INTERFEROMETRY
Acta Mechanica Sinica
[AD-A106635] N82-12021
On the capacity of holographic phase-shift interferometric technique in the visualization of low density flows N82-12024

HOMING
Application of optimal control techniques to tactical missile guidance N82-11086

HOMOGENEITY
Formulae for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222946] N82-11508

HOMOGENEOUS TURBULENCE
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164936] N82-11394
Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164963] N82-11398

HOOKES LAW
Formulas for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222846] N82-11506
HORIZONTAL FLIGHT
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018
Parametric study of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050
HORIZONTAL ORIENTATION
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045
HORN ANTENNAS
Design of throat section of conical corrugated horns N82-11292
HOT CORROSION
Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76606] N82-11120
HOT PRESSING
Advanced selenide thermoelectric development program
[DE81-027823] N82-11562
HUGONIOT EQUATION OF STATE
RATFIT: A rational equation-of-state fitting program
[DE81-027273] N82-11812
HUMAN FACTORS ENGINEERING
Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11065
Standard specification for industrial safety-belt assemblies
[SABS-809-1980] N82-11278
Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104388] N82-11517
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Measuring/computing complex for automation of ergonomic experiments N82-11765
HUMAN PERFORMANCE
The effects of the symbology and spatial arrangement of software specifications in a debugging task
[AD-A104541] N82-11806
HUMAN REACTIONS
Effects of aircraft noise on the equilibrium of airport residents: Testing and utilization of a new methodology
[NASA-TM-76626] N82-11636
HURRICANES
Numerical studies of hurricane-ocean interactions
[PB81-225575] N82-11741
HYBRID CIRCUITS
Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365
HYBRID COMPUTERS
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797
HYDRAULIC EQUIPMENT
Aircraft digital input controlled hydraulic actuation and control system
[AD-A104263] N82-11072
HYDRAZINES
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229
HYDROCARBON FUEL PRODUCTION
Jet fuel looks to shale oil: The 1980 technology review
[AD-A104414] N82-11226
Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-028800] N82-11247
HYDROCARBON FUELS
Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11168
Transportation fuels from synthetic gas
[DE81-029814] N82-11256
HYDROCARBONS
Development and optimization of methodologies for analysis of complex hydrocarbon mixtures
[DE81-025675] N82-11114
Thermal and electrochemical biomass conversion at SERI
[DE81-030507] N82-11583
Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-029071] N82-11641
HYDROCRACKING
Vapor-phase cracking and wet oxidation as potential pollutant control techniques for coal gasification
[PB81-219694] N82-11661
HYDRODYNAMICS
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222995] N82-12018
HYDROELECTRIC POWER STATIONS
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621
HYDROFOILS
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104582] N82-11402
HYDROGEN
Trap activation model for hydrogen retention and isotope exchange in some refractory materials
[DE81-025985] N82-11221
Hydrogen storage-bed design for tritium systems test assembly
[DE81-025336] N82-11262
An error budget for the JPL hydrogen maser receiver N82-11297
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027234] N82-11557
One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-85867] N82-11940
HYDROGEN ATOMS
H-O processor computer code
[DE81-026869] N82-11614
The hydrogen atom in a strong uniform magnetic field N82-11886
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927
HYDROGEN COMPOUNDS
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
HYDROGEN EMBRITTLEMENT
Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11196
Hydrogen damage in stainless steel
[DP-MS-81-31] N82-11197
HYDROGEN FUELS
Technical and economic aspects of hydrogen storage in metal hydrides
[NASA-TM-76610] N82-11223
The storage of hydrogen in the form of metal hydrides: An application to thermal engines
[NASA-TM-76609] N82-11225
HYDROGEN IONS
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974
HYDROGEN ISOTOPES
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030482] N82-11165
HYDROGEN PRODUCTION
Hydride chemical compressor, phase 1
[DE81-030199] N82-11155
Hydrogen production from the photosynthetic bacterium Rhodopseudomonas sphaeroides
[DE81-029831] N82-11258
HYDROGEN-BASED ENERGY
Fusion as a source of synthetic fuels
[BNL-29291] N82-11257
HYDROGENATION
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030482] N82-11165
Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027562] N82-11236
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259
Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260
HYDROGEOLOGY
Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Floridan aquifer
[PB81-225518] N82-11529
Geology and hydrology for environmental planning in Marquette County, Michigan
[PB81-221467] N82-11534
HYDROGRAPHY
An inverse technique for determination of mean ocean circulation N82-11756
HYDROLOGY
Water resources data for Kentucky, water year 1980
[PB81-223812] N82-11526
Water resources data for Michigan, water year 1980
[PB81-224180] N82-11527
Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219810] N82-11734
HYDROLYSIS
Thermal control coatings based on trialkoxysilane hydrolysate binders — tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118
Cattail rhizome-derived alcohol
[DE81-028307] N82-11234
HYPERBOLIC COORDINATES
Characters of rank two hyperbolic Lie algebras as functions at quasiregular cusps N82-11821
HYPERBOLIC FUNCTIONS
Upwind difference schemes for hyperbolic systems of conservation laws N82-11820
Characters of rank two hyperbolic Lie algebras as functions at quasiregular cusps N82-11821
Linear evolution equations of hyperbolic type in a locally convex space N82-11850
HYPERTENSION
Effects of curative treatment emphasizing endurance training on the performance and blood pressure of hypertensive and normotensives
[NASA-TM-76620] N82-11771
HYPERVELOCITY GUNS
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
Compression processes of free pistons after the opening of nozzle in a hypersonic gun tunnel
N82-11021
HYPOKINESIA
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757
Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesia
[NASA-TM-76717] N82-11759
HYPOTHESES
Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2066] N82-11487
HYSTERESIS
Application of a rare-earth cobalt magnet to synchronous motors
[NAL-TR-666] N82-11366

I

ICE FORMATION

Selected bibliography of NACA-NASA aircraft icing publications
[NASA-TM-81651] N82-11053

Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056

Operational environment, meteorological conditions and weather forecasting N82-11057

Technology base for icing instrumentation and mathematical modelling N82-11058

Facilities for development and clearance
N82-11059

Ice protection system technology N82-11060

Proposed standard requirements and procedures for icing clearance N82-11061

Evaluation of photogrammetric flight under icing conditions on March 23, 1979
[NASA-TM-76617] N82-11725

ICE MAPPING

Ice conditions in the eastern Bering Sea from NOAA and LANDSAT imagery: Winter conditions 1974, 1976, 1977, 1979
[PB81-220188] N82-11537

ICE PREVENTION

Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system --- Lewis icing research tunnel
[NASA-CR-164986] N82-11052

Selected bibliography of NACA-NASA aircraft icing publications
[NASA-TM-81651] N82-11053

ICE REPORTING

Ice conditions in the eastern Bering Sea from NOAA and LANDSAT imagery: Winter conditions 1974, 1976, 1977, 1979
[PB81-220188] N82-11537

IGNITION

Uncertainties associated with inertial-fusion ignition
[DE81-025408] N82-11944

IMAGE PROCESSING

Identification of lithologic units using multichannel imaging systems N82-11509

Military geodesy and geospace science, unit three
[AD-A105072] N82-11711

SAR processing on the MPP
[NASA-CR-166726] N82-11801

Computer processing of periodic electron micrographs N82-11815

IMAGERY

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738

IMAGING TECHNIQUES

Digital SAR processing using a fast polynomial transform N82-11295

Reliability and maintainability assessment report for laser scanner image generation system, revision A
[AD-A104239] N82-11455

Second Image Generation/Display Conference: Closing comments --- flight simulators
[AD-A104676] N82-11807

Computer processing of periodic electron micrographs N82-11815

Microstructures · for high-energy X-ray and particle-imaging applications
[DE81-026531] N82-11899

IMMOBILIZATION

Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11780

IMPACT TESTING MACHINES

Side impact sled and padding development
[PB81-217952] N82-11092

IMPEDANCE MATCHING

Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029815] N82-11933

IMPEDANCE MEASUREMENTS

A new method for measuring the acoustic impedance of the ground N82-11856

IMPLOSIONS

Report of laser activities: 1978 - 1979
[DE81-028667] N82-11459

One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-86867] N82-11940

Uncertainties associated with inertial-fusion ignition
[DE81-025408] N82-11944

Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952

IMPREGNATING

SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615

IMPURITIES

The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11548

IN-FLIGHT MONITORING

Electronic master monitor and advisory display system, data transmission study
[AD-A104243] N82-11064

Electronic master monitor and advisory display system, human engineering summary report
[AD-A104244] N82-11065

INCENTIVES

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 6: Innovation by regulation: The administration of control technology requirements under the Clean Air Act
[PB81-221616] N82-11664

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 7: Periodic review and technological escalation of performance standards: New source performance standards review process
[PB81-218117] N82-11665

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 8: Controlled trading and site-specific SIP revisions: Competing for attention in a crowded administrative route
[PB81-218273] N82-11666

INCOMPRESSIBLE FLOW

Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-8110] N82-11038

INDEPENDENT VARIABLES

The determination of navigational and meteorological variables measured by NOAA/RFC WP3D aircraft
[PB81-225466] N82-11743

INDEXES (DOCUMENTATION)

NASA Patent Abstracts Bibliography: A continuing bibliography, section 2, indexes. Supplement 19
[NASA-SP-7039(19)-SEC-2] N82-11982

INDIAN OCEAN

Comparison of ocean and island rainfall in the tropical South Pacific, Atlantic, and Indian Oceans
[PB81-225401] N82-11745

INDIUM PHOSPHIDES

InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452

Analysis of indium-phosphide/indium tin oxide solar cells
[DE81-025807] N82-11610

INDUCTION MOTORS

Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11380

INDUCTORS

Proton induction linacs as high-intensity neutron sources
[DE81-026825] N82-11878

INDUSTRIAL ENERGY

Alternative fuel for the steel industry of Northern Indiana: A prefeasibility study of a central coal gasification project
[DE81-029314] N82-11233

Feasibility and economic study of medium-BTU coal gas blended with high-BTU by product gas as an industrial energy source at Billings, Montana
[DE81-025166] N82-11237

Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11238

Workshop proceedings: Combustion Turbine Residual Oil
[EPRI-WS-80-132] N82-11281

Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030705] N82-11405

Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569

INDUSTRIAL PLANTS

Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030158] N82-11235

Second generation heliostat. Volume 2: Definition of a heliostat manufacturing facility
[DE81-029624] N82-11565

Second generation heliostat program, September 1979-March 1981
[DE81-029752] N82-11570

INDUSTRIAL SAFETY

Standard specification for industrial safety-belt assemblies
[SABS-809-1980] N82-11278

Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11851

Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780

Handbook for industrial noise control
[NASA-SP-5108] N82-11858

INDUSTRIAL WASTES

Preliminary development of a technique for estimating municipal-solid-waste generation
[DE81-024152] N82-11590

Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline
[PB81-212037] N82-11658

INELASTIC SCATTERING

Elastic and inelastic psi production by muons
[DE81-025326] N82-11877

INEQUALITIES

A general moment inequality for the maximum of rectangular partial sums of multiple series
[AD-A104475] N82-11828

An upper bound on the probability density function in terms of Fisher information. A bound to the density function
[AD-A104474] N82-11837

INERT ATMOSPHERE

Method for retarding dye fading during archival storage of developed color photographic film --- inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432

INERTIAL CONFINEMENT FUSION

Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029900] N82-11458

Electron-temperature requirememts for neutralized inertial-confinement-fusion light-ion beams
[DE81-025352] N82-11884

Nova pulse power system description and status
[DE81-025800] N82-11896

Heavy ion beam interaction and energy partition in the initial stages of ICF target irradiation
[DE81-025296] N82-11903

Considerations for the design, implementation, and effective operation of Sandia's super-power generators
[DE81-025404] N82-11906

Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952

Scalability of light ion beams to reach fusion conditions
[DE81-024443] N82-11953

INERTIAL FUSION (REACTOR)

Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029900] N82-11458

Production and characterization of pure cryogenic inertial fusion targets
[DE81-025820] N82-11937

Uncertainties associated with inertial-fusion ignition
[DE81-025408] N82-11944

INFERENCE

Prediction, diagnosis, and causal thinking in forecasting
[AD-A104372] N82-11843

INFORMATION DISSEMINATION
Microfiche as a vehicle for technical reports
[PB81-228009] N82-11986
INFORMATION RETRIEVAL
Content representation for retrieval
[PB81-170672] N82-11984
INFORMATION SYSTEMS
Design methodology and development history of an ISO OSI layered architecture for the Canadian Broadcast Telidon system
[CRC-TN-708-E] N82-11337
Remote Medical Diagnosis System RMDS design review meeting minutes
[AD-A104555] N82-11772
INFORMATION THEORY
Evaluation of uncertainties in geologic information
[DE81-025997] N82-11714
DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774
INFRARED IMAGERY
An assessment of detecting mesoscale rainfall from mid-latitude cyclones using GOES imagery data
[AD-A104377] N82-11726
INFRARED LASERS
InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452
Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027298] N82-11462
INFRARED REFLECTION
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910
INFRARED SPECTRA
An analysis of cloud property retrieval using infrared sounder data
[PB81-221606] N82-11732
INFRARED SPECTROSCOPY
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150
Proof of concept study
[AD-A104336] N82-11639
Far-infrared measurements of trace gases
[NASA-CR-164965] N82-11698
INITIATION
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-026594] N82-11162
Correlation of shock-initiation tests for explosives and propellants
[DE81-026533] N82-11264
Hot-spot initiation of heterogeneous explosives
[DE81-027801] N82-11266
INJECTION
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929
INLET FLOW
A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025
A summary of V/STOL inlet analysis methods
[NASA-TM-82725] N82-11043
INORGANIC COMPOUNDS
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632
INPUT
Mathematical investigation of linear control systems containing input derivatives N82-11819
INSOLATION
Low-cost solar array project: Four absolute cavity radiometer (pyrheliometer) intercomparisons at New River, Arizona: Radiometer standards
[NASA-CR-164950] N82-11435
Mississippi County Community College solar photovoltaic project
[DE81-030669] N82-11554
INSPECTION
Standard specification for light ladders
[SABS-1304-1980] N82-11277
INSTALLING
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030982] N82-11566
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030986] N82-11567
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031821] N82-11568
Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569
INSULATION
Scalability of light ion beams to reach fusion conditions
[DE81-024443] N82-11953
INSULATORS
Elastomer unistructure insulators
[DE81-024366] N82-11219
INTEGRAL CALCULUS
Vector integrals and products of vector measures N82-11647
INTEGRAL EQUATIONS
A study on numerical method for evaluating spanwise integral in subsonic lifting-surface theory
[NAL-TR-661T] N82-11035
Closed form evaluation of symmetric two-sided complex integrals N82-11299
INTEGRATED CIRCUITS
R&D services to develop an improved isolation technology radiation hardened bipolar integrated circuits (PEDIC)
[AD-A104657] N82-11367
Modeling and elimination of latch-up in bulk CMOS integrated circuits
[DE81-017413] N82-11377
Semiconductor measurement technology ARPA/NBS Workshop Moisture Measurement Technology for Hermetic Semiconductor Devices
[PB81-220733] Nd2-11384
INTEGRATED ENERGY SYSTEMS
Analysis of the fuel and cost effects of interfacing utilities and small-power cogenerators
[DE81-028495] N82-11579
INTERACTIONS
The individual versus the computer: An examination of attitude problems and their impact on system development
[AD-A104636] N82-11977
INTERACTIVE CONTROL
GRAMPS: A graphics language interpreter for real time, interactive, three dimensional picture editing and animation
[DE81-027396] N82-11811
INTERFACE STABILITY
Pulsed-echo interface wave characterization of bolted plates N82-11126
Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127
INTERFACES
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
INTERFACIAL ENERGY
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183
INTERFACIAL TENSION
Acoustic cavitation studies
[AD-A104409] N82-11663
INTERFEROMETERS
Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121
Optical fiber interferometer for the study of ultrasonic waves in composite materials, discussion N82-11122
DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124
Detection of acoustic emission in composites by optical fiber interferometry N82-11125
Optical detection of pulsed surface particle displacements N82-11131
Wideband optical measurements of ultrasonic pulses N82-11132
Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133
Digital control of machine tools
[DE81-029950] N82-11478
Reflection/transmission phase shift interferometer and viewing optics
[DE81-027656] N82-11916
INTERMETALLICS
Effects of alloying on aging and hardening processes of steel with 20% nickel
[NASA-TM-76624] N82-11186
INTERNAL COMBUSTION ENGINES
Assessment of I.C. engines as drivers for heat actuated heat pumps
[DE81-024086] N82-11421
INTERNAL FRICTION
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11196
INTERNATIONAL COOPERATION
International safeguards for spent fuel storage
[DE81-029696] N82-11892
INTERNATIONAL SUN EARTH EXPLORERS
Magnetic Field Investigation for ISEE mother and daughter spacecraft — magnetometer design, capability, and results
[NASA-CR-166713] N82-11105
INTERNATIONAL TRADE
US energy strategies: Some options for eliminating oil imports by the year 2000
[PB81-226052] N82-11626
INTERPLANETARY MAGNETIC FIELDS
Geomagnetic observations N82-11693
INTERPROCESSOR COMMUNICATION
Microcomputer-controlled communication network for Sandia National Laboratories' environmental test chambers
[DE81-030988] N82-11355
INTERSTELLAR MASERS
Radio astronomy N82-11280
INVISCID FLOW
The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015
ION ACCELERATORS
Proton induction linacs as high-intensity neutron sources
[DE81-025625] N82-11878
Heavy ion fusion program at Argonne
[DE81-023905] N82-11902
ION ATOM INTERACTIONS
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025188] N82-11886
ION BEAMS
Electron-temperature requirememts for neutralized inertial-confinement-fusion light-ion beams
[DE81-025352] N82-11884
Heavy ion beam interaction and energy partition in the initial stages of ICF target irradiation
[DE81-025296] N82-11903
Considerations for the design, implementation, and effective operation of Sandia's super-power generators
[DE81-025404] N82-11908
Scalability of light ion beams to reach fusion conditions
[DE81-024443] N82-11953
ION CYCLOTRON RADIATION
Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925
ION IMPLANTATION
Trapping and surface permeation of deuterium in Fe, Ni and stainless steel: An ion-beam study
[DE81-023303] N82-11201
Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165283] N82-11546
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974
ION SCATTERING
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025188] N82-11886
ION SOURCES
Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11888

Scalability of light ion beams to reach fusion conditions
[DE81-024443] N82-11853

ION TEMPERATURE
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929
Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932

IONIC COLLISIONS
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

IONIC MOBILITY
Plasma confinement in the TMX tandem mirror
[UCRL-85683] N82-11939

IONIZATION
Ionization fluctuations in collisional ionizing shock waves — plasma interactions N82-11864
Spectrum of four-times ionised niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027584] N82-11968

IONIZATION CHAMBERS
Bragg curve spectroscopy
[DE81-025627] N82-11161

IONIZING RADIATION
Effects of ionizing radiation on the chemical structure, crystalline content and molecular weight distribution of various Teflon resins N82-11203

IONOSPHERE
Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699

IONOSPHERIC ELECTRON DENSITY
Plasmaspheric, faraday and total electron contents, 1977 and 1978
[AD-A104362] N82-11700

IONOSPHERIC PROPAGATION
Effect of energetic particle events on VLF/LF propagation parameters, 1974 - 1977
[AD-A104506] N82-11344

IONOSPHERIC STORMS
ALTAIR radar study of equatorial spread F
[AD-A104554] N82-11710

IONS
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11436

IRON
Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11198
Trapping and surface permeation of deuterium in Fe, Ni and stainless steel: An ion-beam study
[DE81-023303] N82-11201
Monte Carlo calculations of the melting point of iron at core pressures N82-11661
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973

IRON ALLOYS
Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180

IRON COMPOUNDS
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

IRON OXIDES
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

IRRADIATION
Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116
Irradiation-induced swelling in commercial alloys
[DE81-029756] N82-11191
Pulsed DF laser effects study
[AD-A104575] N82-11457
Mechanistic analysis of toft pulsed neutron activation data — pipe flow velocity
[DE81-027124] N82-11878
Heavy ion beam interaction and energy partition in the initial stages of ICF target irradiation
[DE81-025296] N82-11903
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11954

IRRIGATION
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549

ISLANDS
Comparison of ocean and island rainfall in the tropical South Pacific, Atlantic, and Indian Oceans
[PB81-225401] N82-11745

ISOBARS (PRESSURE)
The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

ISOTOPE SEPARATION
Trap activation model for hydrogen retention and isotope exchange in some refractory materials
[DE81-025995] N82-11221
Lasers in materials processing
[DE81-027657] N82-11460

ISOTOPES
Statistical versus valence neutron neutron capture in Mo-98
[DE81-023943] N82-11880

ISOTROPIC TURBULENCE
Theoretical investigation of a passive scalar such as temperature in isotropic turbulence N82-11366
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164936] N82-11394

ISOTROPY
Formulae for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222846] N82-11506

J

JET AIRCRAFT NOISE
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11880

JET ENGINE FUELS
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-025961] N82-11167
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165391] N82-11224
Jet fuel locks to shale oil: The 1980 technology review
[AD-A104414] N82-11228
An assessment of the use of antimisting fuel in turbofan engines
[NASA-CR-165258] N82-11230

JET FLOW
Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028
Impinging jets
[PB81-227902] N82-11392

JET IMPINGEMENT
The effects of jet exhaust blast impingements on graphite-epoxy composites — F-18 aircraft
[AD-A104622] N82-11136
Impinging jets
[PB81-227902] N82-11392
Jet impingement heat transfer enhancement for the GPU-3 Stirling engine
[NASA-TM-82727] N82-11993

K

KALMAN FILTERS
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025676] N82-11194

KENTUCKY
Solvent-Refined Coal-1 Demonstration Project. Final environmental impact statement, Volume 1 of 2 — coal liquefaction plant at Newman, Kentucky
[DE81-025963] N82-11252
Water resources data for Kentucky, water year 1980
[PB81-223612] N82-11526

KERNEL FUNCTIONS
A computer solution to the stationary Navier-Stokes equations in two dimensions with proven convergence
[NASA-TM-81300] N82-11398
Bounded limit for the Monte Carlo point-flux-estimator
[DE81-026526] N82-11883
Acta Mechania Sinica
[AD-A105635] N82-12021
On the kernel function collocation method in steady subsonic flow for wing with control surfaces
N82-12023

KINETIC ENERGY
An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926

KINETIC EQUATIONS
Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932

KNUDSEN FLOW
Use of molecular beams to support microspheres during plasma coating
[DE81-025601] N82-11873

L

LABORATORY EQUIPMENT
Guide to the evaluation and use of an atomic absorption spectrophotometer
[PB81-222853] N82-11444

LADDERS
Standard specification for light ladders
[SABS-1304-1980] N82-11277

LAGOONS
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632
Stabilization characteristics of deposits of biologic solids generated in aerated lagoons
[PB81-224297] N82-11668

LAMINAR BOUNDARY LAYER
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction
[NASA-TP-1902] N82-11391

LAMINAR FLOW
Investigation of heat transfer in straight and curved rectangular ducts for laminar and transition flows
[AD-A104604] N82-11401

LAMINATES
An improved transverse shear deformation theory for laminated antisotropic plates
[NASA-TP-1903] N82-11488

LAND MANAGEMENT
Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11718

LAND USE
An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513
Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164931] N82-11514
Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11718

LANGUAGE PROGRAMMING
Elements of programming linguistics. Part 1: The lambda calculus and its implementation
[AD-A104345] N82-11805

LANTHANUM
Analysis of standard reference materials by absolute INAA
[DE81-025925] N82-11900

LANTHANUM COMPOUNDS
The use of lanthanide chelates as selective complexing sorbents for gas chromatography
N82-11139

LARGE SCALE INTEGRATION
Modeling and elimination of latch-up in bulk CMOS integrated circuits
[DE81-017413] N82-11377

LARGE SPACE STRUCTURES
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093
Nonparametric identification of a class of nonlinear close-coupled dynamic systems
[NASA-CR-164948] N82-11098

Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164971] N82-11099
On the shape and orientation control of an orbiting shallow spherical shell structure — shape and orientation control of large dish type receivers/reflectors
[NASA-CR-164970] N82-11100
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems. Volume 1: Executive summary
[NASA-CR-165502-VOL-1] N82-11110
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems, volume 2
[NASA-CR-165502-VOL-2] N82-11111
Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11493

LASER APPLICATIONS
Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: including acousto-optic techniques
[DE81-029626] N82-11381
Lasers in materials processing
[DE81-027657] N82-11460
Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11968

LASER DAMAGE
Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456
Antireflecting film development — for resisting damage from laser pulses
[DE81-030010] N82-11915

LASER FUSION
Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029900] N82-11458
Gas-jet laser-plasma interaction experiments
[DE81-027169] N82-11943

LASER GYROSCOPES
Theoretical analysis of effect of Langmuir flow in ring laser N82-11447

LASER MODES
InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452

LASER OUTPUTS
Theoretical investigations into possible X-ray and gamma-ray lasers N82-11445
China report: Science and technology, no. 125
[JPRS-78932] N82-11446
Analytical description of time characteristics of high power laser pulses N82-11448
Analytical description of time characteristics high power laser pulses N82-11449
Characteristics of pulse gold vapor lasor outlined N82-11450
Laser triggered spark gaps under experimental study N82-11451
Reliability and maintainability assessment report for laser scanner image generation system, revision A
[AD-A104239] N82-11455

LASER PLASMA INTERACTIONS
Gas-jet laser-plasma interaction experiments
[DE81-027169] N82-11943

LASER PUMPING
Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027298] N82-11462

LASER SPECTROSCOPY
Molecular spectroscopy and relaxation in supersonic beams N82-11867

LASER TARGET INTERACTIONS
Pulsed DF laser effects study
[AD-A104575] N82-11457
Report of laser activities: 1978 - 1979
[DE81-028997] N82-11459

LASER TARGETS
Production and characterization of pure cryogenic inertial fusion targets
[DE81-025920] N82-11937

LASER WEAPONS
Where are we in the space war?
[NASA-TM-76604] N82-11096

LASERS
China report: Science and technology, no. 125
[JPRS-78932] N82-11446
Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920
Gas-jet laser-plasma interaction experiments
[DE81-027169] N82-11943
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11964

LATCH-UP
Modeling and elimination of latch-up in bulk CMOS integrated circuits
[DE81-017413] N82-11377

LATCHES
Low temperature latching solenoid
[NASA-CASE-MSC-18106-1] N82-11357

LATE STARS
Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003

LATERAL CONTROL
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051

LATTICE PARAMETERS
Theoretical and experimental studies of the electro-optic effect: Toward a microscopic understanding
[AD-A104363] N82-11961

LEACHING
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

LEAD ACID BATTERIES
Recent advances in lead-acid cell research and development
[DE81-023104] N82-11580
Preventing large-battery explosions
[PB81-227373] N82-11628

LEAD TELLURIDES
Development of MBE grown Pb-salt semiconductor lasers for the 8.0 to 15.0 micrometer spectral region
[NASA-CR-165663] N82-11453

LEADING EDGES
Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system — Lewis icing research tunnel
[NASA-CR-164966] N82-11052

LEAST SQUARES METHOD
Constrained adaptive least mean squared filters
[AD-A104625] N82-11830
Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925

LEE WAVES
Three-dimensional lee waves in a continuously stratified fluid N82-11387

LEVELING
A model of temperature stratification for correction of leveling refraction
[PB81-225435] N82-11744

LEVITATION
Use of molecular beams to support microspheres during plasma coating
[DE81-025601] N82-11873

LIE GROUPS
Characters of rank two hyperbolic Lie algebras as functions at quasiregular cusps N82-11821

LIFT
Some features of flow past slotted wings
[RAE-LIB-TRANS-2050] N82-11030
A study on numerical method for evaluating spanwise integral in subsonic lifting-surface theory
[NAL-TR-661T] N82-11035

LIGANDS
High-pressure optical studies
[DE81-025677] N82-11918

LIGHT IONS
Electron-temperature requirements for neutralized inertial-confinement-fusion light-ion beams
[DE81-025352] N82-11884

LIGHT SCATTERING
Light scattering by bubbles in liquids or in glass
[AD-A104241] N82-11912
The deconvolution of aerosol backscattered optical pulses to obtain system-independent aerosol signatures
[AD-A104578] N82-11914
Stimulated Raman scattering in large plasmas
[DE81-026589] N82-11938

LIGHT SOURCES
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-023507] N82-11874

LIMESTONE
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

LIMITERS (FUSION REACTORS)
Physics considerations for the FED limiter
[DE81-027596] N82-11950
Coated-limiter testing in Tokamaks
[DE81-027665] N82-11951

LIMITS (MATHEMATICS)
An upper bound on the probability density function in terms of Fisher information. A bound to the density function
[AD-A104474] N82-11837
Bounded limit for the Monte Carlo point-flux-estimator
[DE81-026526] N82-11883

LINE OF SIGHT
Estimates for the probabilities of surface-to-air cloud-free lines-of-sight and low cloud statistics from ship observations. Part 1: Fifteen marine locations
[AD-A104633] N82-11730

LINE SPECTRA
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11968

LINEAR ACCELERATORS
Proton induction linacs as high-intensity neutron sources
[DE81-025825] N82-11878
Heavy ion fusion program at Argonne
[DE81-023905] N82-11902

LINEAR EQUATIONS
Linear evolution equations of hyperbolic type in a locally convex space N82-11850
Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-028269] N82-11906

LINEAR PROGRAMMING
An optimization model for energy generation and distribution in a dynamic facility N82-11310

LINEAR SYSTEMS
Theory of stochastic optimal control some basic notions N82-11075
Nonparametric identification of a class of nonlinear close-coupled dynamic systems
[NASA-CR-164948] N82-11098
Closed form evaluation of symmetric two-sided complex integrals N82-11299
Mathematical investigation of linear control systems containing input derivatives N82-11819
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006
A self-consistent linear-mode analysis of a stellar convection zone N82-12008

LINEARITY
Formulae for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222346] N82-11506

LINGUISTICS
Elements of programming linguistics. Part 1: The lambda calculus and its implementation
[AD-A104345] N82-11805

LININGS
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

LIQUID CHROMATOGRAPHY
Development and optimization of methodologies for analysis of complex hydrocarbon mixtures
[DE81-025875] N82-11114
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166

LIQUID FLOW
Directional flow sensor
[NASA-CASE-FRC-11074-1] N82-11436

LIQUID FUELS
Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11168

LIQUID INJECTION
Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429

LIQUID METALS
Liquid and solid metal embrittlement
[AD-A103048] N82-11187

LIQUID OXYGEN
Liquid oxygen turbopump technology
[NASA-CR-165487] N82-11466

LIQUID PHASE EPITAXY
InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452

LIQUID PHASES
Electron attachment as a probe of photoionization processes in liquid media — pyrene
[DE81-028352] N82-11163

LIQUID-SOLID INTERFACES
Liquid and solid metal embrittlement
[AD-A103048] N82-11187

LISP (PROGRAMMING LANGUAGE)
Elements of programming linguistics. Part 1: The lambda calculus and its implementation
[AD-A104345] N82-11805

LITHIUM
Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

LITHIUM SULFUR BATTERIES
Investigation of Lithium Sulfur Dioxide (Li/SO2) battery safety hazard
[AD-A104326] N82-11552
Lithium/iron sulfide cell development for electric-vehicle propulsion
[DE81-023570] N82-11996

LITHOLOGY
Geologic considerations in underground coal mining system design
[NASA-CR-164961] N82-11516

LITHOSPHERE
Study of the time evolution of the lithosphere
[NASA-CR-164966] N82-11696

LITTORAL DRIFT
Critical wave conditions for sand motion initiation
[AD-A104376] N82-11400

LOADS (FORCES)
Stochastic models for dependent load processes
[PB81-219736] N82-11327

LOGIC CIRCUITS
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

LONG TERM EFFECTS
Stress relaxation of cellular silicone material: 1981
[DE81-030692] N82-11137
Evaluation of the effects of solar radiation on glasses
[NASA-CR-161907] N82-11207
Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165505] N82-11545
Long-term performance of the Hunn passive solar residence
[DE81-028735] N82-11600
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

LOUVERS
Three prototype designs for an exterior-mounted, interior-operated, movable insulation system
[DE81-025586] N82-11324

LOW COST
Low-cost solar flat-plate-collector development
[DE81-025081] N82-11584

LOW DENSITY FLOW
On the capacity of holographic phase-shift interferometric technique in the visualization of low density flows N82-12024

LOW NOISE
Low noise tuned amplifier
[NASA-CASE-GSC-12587-1] N82-11359

LOW SPEED STABILITY
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013
Wind-tunnel results for a modified 17-percent-thick low-speed airfoil section
[NASA-TP-1919] N82-11033

LOW TEMPERATURE ENVIRONMENTS
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165391] N82-11224

LUBRICATION
Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471

LUGS
Strength behaviour of fatigue cracked lugs — stress intensity and crack propagation characteristics
[RAE-LIB-TRANS-2057] N82-11486

LUMINAIRES
The effects of gaseous atmospheres on the performance characteristics of aluminum-sodium nitrate flares
[AD-A104383] N82-11227

LUNAR EXPLORATION
Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11989

LYMPHOCYTES
Human lymphocyte calcium metabolism N82-11769

M

MACH NUMBER
Wind tunnel supplementary Mach number minimum section insert
[NASA-CASE-LAR-12532-1] N82-11066

MACH-ZEHNDER INTERFEROMETERS
Detection of ultrasonic waves in solids by an optical fiber interferometer N82-11123

MACHINE TOOLS
Digital control of machine tools
[DE81-029950] N82-11476

MAGNESIUM
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597

MAGNESIUM ALLOYS
Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11189

MAGNESIUM COMPOUNDS
The storage of hydrogen in the form of metal hydrides: An application to thermal engines
[NASA-TM-76609] N82-11225

MAGNET COILS
High-voltage air-core pulse transformers
[DE81-030899] N82-11370

MAGNETIC CONTROL
Low temperature latching solenoid
[NASA-CASE-MSC-18106-1] N82-11357

MAGNETIC EFFECTS
The hydrogen atom in a strong uniform magnetic field N82-11866

MAGNETIC FIELD CONFIGURATIONS
Magnetic fusion energy program, volume 1
[SAI-254-80-656-LJ-VOL-1] N82-11955
Magnetic fusion energy program, volume 2
[SAI-254-80-656-LJ-VOL-2] N82-11956

MAGNETIC FIELDS
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104
Detection of vibrations in metallic structures using small passive magnetic fields
[AD-A104405] N82-11495
The hydrogen atom in a strong uniform magnetic field N82-11866
Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11898

MAGNETIC FLUX
Energy losses in conductors carrying very high currents
[DE81-025367] N82-11373
Stability of permanent-magnet parameters
[DE81-027013] N82-11852

MAGNETIC INDUCTION
Geomagnetic observations N82-11693

MAGNETIC MATERIALS
Application of a rare-earth cobalt magnet to synchronous motors
[NAL-TR-656] N82-11358

MAGNETIC MEASUREMENT
Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] N82-11103
The piezomagnetic effect: Limits on detectability using a combined vector and scalar magnetometer array N82-11430

MAGNETIC MIRRORS
Plasma confinement in the TMX tandem mirror
[UCRL-85883] N82-11939
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025508] N82-11954
Magnetic fusion energy program, volume 1
[SAI-254-80-656-LJ-VOL-1] N82-11955
Magnetic fusion energy program, volume 2
[SAI-254-80-656-LJ-VOL-2] N82-11956

MAGNETIC PROPERTIES
Magnetic bearings
[DE81-024201] N82-11473
A review of an attempt to create shatter cones with magnetic flyer plate technology
[NASA-CR-164614] N82-11492

MAGNETIC SUSPENSION
Stirling cycle cryogenic cooler --- magnetically suspended pistons
[NASA-CASE-GSC-12697-1] N82-11312

MAGNETO-OPTICS
Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027296] N82-11462

MAGNETOHYDRODYNAMIC FLOW
Finite temperature relativistic magnetohydrodynamic winds N82-11923

MAGNETOHYDRODYNAMIC GENERATORS
One-dimensional equilibrium-chemistry flow model for coal combustors
[DE81-027622] N82-11158
Mass spectrometric studies of MHD slag thermochemistry
[PB81-221434] N82-11173
Magnetohydrodynamic research program of the MHD Energy center at Mississippi State University and structural features of MHD radiant boilers
[DE81-029901] N82-11934
Development, testing, and evaluation of MHD materials and component designs. Volume 1: Executive summary
[DE81-026203] N82-11947

MAGNETOHYDRODYNAMIC STABILITY
Report of laser activities: 1978 - 1979
[DE81-026997] N82-11459
Theory of drift instabilities and the associated anomalous transport
[IPPJ-REV-1] N82-11924
An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926

MAGNETOHYDRODYNAMICS
Finite temperature relativistic magnetohydrodynamic winds N82-11923
One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-85867] N82-11940

MAGNETOMETERS
Magnetic Field Investigation for ISEE mother and daughter spacecraft — magnetometer design, capability, and results
[NASA-CR-166713] N82-11105
The piezomagnetic effect: Limits on detectability using a combined vector and scalar magnetometer array N82-11430

MAGNETOPAUSE
Magnetic Field Investigation for ISEE mother and daughter spacecraft — magnetometer design, capability, and results
[NASA-CR-166713] N82-11105

MAGNETOSPHERE
Geomagnetic observations N82-11693
Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699

MAGNETRONS
Trajectory analysis of the electrons in a magnetron-type gun
[DE81-027860] N82-11905

MAGNETS
Application of a rare-earth cobalt magnet to synchronous motors
[NAL-TR-656] N82-11358
Stability of permanent-magnet parameters
[DE81-027013] N82-11862
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025568] N82-11954

MAINE
Water resources data for Maine, water year 1980
[PB81-226769] N82-11541

MAINTAINABILITY
Analysis of 4&5 data — program evaluation
[AD-A104249] N82-11804

MAINTENANCE
Rehabilitation of 64-meter-antenna radial bearing
N82-11301
Networks consolidation program: Maintenance and Operations (M&O) staffing estimates N82-11303
Goldstone (GDSCC) administrative computing
N82-11306
Preventing large-battery explosions
[PB81-227373] N82-11626

MAN MACHINE SYSTEMS
NOCA upgrade N82-11304
Condition recognition for a program synthesizer
[AD-A104586] N82-11808
The individual versus the computer: An examination of attitude problems and their impact on system development
[AD-A104636] N82-11977

MANAGEMENT INFORMATION SYSTEMS
The individual versus the computer: An examination of attitude problems and their impact on system development
[AD-A104636] N82-11977

MANAGEMENT PLANNING
DSN model for use in strategic planning
N82-11284
Applying science and technology to improve local government productivity
[PB81-217986] N82-11976

MANGANESE ALLOYS
Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180

MANGANESE COMPOUNDS
Manganese glass-molybdenum metallized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11218

MANIFOLDS (MATHEMATICS)
Homeomorphisms of some direct limit spaces
N82-11848

MANNED SPACE FLIGHT
Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097

MANPOWER
Goldstone (GDSCC) administrative computing
N82-11306

MANUAL CONTROL
Control law design for transport aircraft flight tasks
N82-11080

MANUALS
Photovoltaic operations manual radio station WBNO
[DE81-027439] N82-11603

MANUFACTURING
The industrial processing of unidirectional fiber prepregs
[NASA-TM-76599] N82-11119
The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11548

MAPPING
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104
Military geodesy and geospace science, unit three
[AD-A105072] N82-11711
Reflection/transmission phase shift interferometer and viewing optics
[DE81-027658] N82-11916
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017

MARINE ENVIRONMENTS
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161867] N82-11181

MARINE RESOURCES
The planning and management of California's coastal resources
[PB81-224057] N82-11670

MARKET RESEARCH
Three prototype designs for an exterior-mounted, interior-operated, movable insulation system
[DE81-025586] N82-11324
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549
National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11966

MARKOV PROCESSES
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11840

MARSHLANDS
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632

MARTENSITE
Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029946] N82-11192
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12269] N82-11195

MASERS
Cryogenic filters for RFI protection N82-11293
Traveling-wave maser, closed cycle refrigerator automation N82-11294

MASS SPECTROMETERS
Soot formation in synfuels
[DE81-030273] N82-11164
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11438
Design and fabrication of quadrupole ion mass spectrometer for upper atmosphere
[AD-A104319] N82-11705

MASS SPECTROSCOPY
Bragg curve spectroscopy
[DE81-025827] N82-11161
Mass spectrometry of the CO2 laser plasma
[AD-A104344] N82-11454
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773
Molecular-beam system for the study of transient combustion processes
[DE81-030663] N82-11872

MASSACHUSETTS
Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-026490] N82-11519
Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523

MATERIALS RECOVERY
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615

MATHEMATICAL MODELS
Technology base for icing instrumentation and mathematical modelling N82-11058
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030262] N82-11151
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-026684] N82-11162
Trap activation model for hydrogen retention and isotope exchange in some refractory materials
[DE81-025665] N82-11221
Hot-spot initiation of heterogeneous explosives
[DE81-027601] N82-11266
LLNL underground coal gasification project
[DE81-030634] N82-11267
DSN model for use in strategic planning
N82-11284
Minimizing the time to troubleshoot a failed system
N82-11298
Stochastic models for dependent load processes
[PB81-219735] N82-11327
Determination of the spectra of modulated pulse trains by the spectral function method
[RAE-LIB-TRANS-2058] N82-11335
Antenna pattern modification for single reflector antennas — smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11336
Superconducting proximity effect for in situ and model layered systems
[DE81-025530] N82-11372
Modeling and elimination of latch-up in bulk CMOS integrated circuits
[DE81-017413] N82-11377
Three-dimensional lee waves in a continuously stratified fluid N82-11387
Some problems in the calculation of flows with tangential discontinuities
[RAE-LIB-TRANS-2059] N82-11389
Surface-tension induced instabilities: Effects of lateral boundaries
[NASA-CR-165530] N82-11390
A three-dimensional simulation of transition and early turbulence in a time-developing mixing layer
[NASA-CR-164942] N82-11393
Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395
Diffusivity of particles moving rapidly through a turbulent fluid
[DE81-030414] N82-11406
Stefan problem with a convective boundary condition
[DE81-030424] N82-11410
Mean values and an inverse problem for porous media flow
[DE81-027210] N82-11411
Conduct a state-of-the-art survey of existing knowledge for the design of ground-source heat pumps
[DE81-024084] N82-11420
Heat pump R and D at Oak Ridge National Laboratory
[DE81-024121] N82-11422
Calibration of a laminar flowmeter
[DE81-024423] N82-11442
Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2056] N82-11487
Integrated analysis of engine
[NASA-TM-82713] N82-11491
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11496
A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166708] N82-11510
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030962] N82-11566
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031921] N82-11568

Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030961] N82-11559
Analysis of solar desiccant systems and concepts
[DE81-029027] N82-11612
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79336] N82-11762
Time and information model of human Memory Organization N82-11763
Physics in few dimensions — condensed matter physics
[DE81-028054] N82-11853
Constitutive modelling for the shock physicist
[DE81-024083] N82-11854
An electrostatic model for energies of molecules in solution N82-11869
Uncertainty analysis for geologic disposal of radioactive waste
[DE81-027206] N82-11893
Polishing-to-figuring transition in turned optics
[DE81-029891] N82-11917
RF-driven Tokamak reactor with sub-ignited, thermally stable operation
[DE81-029437] N82-11935
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164830] N82-12010
A model of the normal and null states of pulsars
[PB81-215807] N82-12011
Radiative transfer in cometary dust atmospheres: Critique of recent developments
[NASA-CR-164846] N82-12015

MATRICES (MATHEMATICS)
Mathematical investigation of linear control systems containing input derivatives N82-11819
On permanents and diagonal products of doubly stochastic matrices N82-11832

MAXIMA
A general moment inequality for the maximum of rectangular partial sums of multiple series
[AD-A104475] N82-11828

MAXIMUM ENTROPY METHOD
Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925
Maximal entropy in fluid and plasma turbulence: A review
[DE81-025366] N82-11946

MAXIMUM LIKELIHOOD ESTIMATES
A note on a nonparametric maximum penalized likelihood estimator of the probability density function of a positive random variable. AMPLE with positive support
[AD-A104476] N82-11836

MEAN
Properties of batch means from stationary ARMA (1, 1) time series
[AD-A104245] N82-11839

MEASURING INSTRUMENTS
Technology base for icing instrumentation and mathematical modelling N82-11058
A ground-motion displacement gauge
[AD-A104325] N82-11437
Performance assessments of precipitation gages for snow measurement
[PB81-218547] N82-11443

MECHANICAL DEVICES
Clamp-mount device
[NASA-CASE-MFS-25510-1] N82-11470

MECHANICAL ENGINEERING
Research in nonlinear structural and solid mechanics
[NASA-CP-2147-SUPPL] N82-11489
Space shuttle main engine controller
[NASA-TP-1932] N82-11784

MECHANICAL IMPEDANCE
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767

MELTING POINTS
Monte Carlo calculations of the melting point of iron at core pressures N82-11881

MELTS (CRYSTAL GROWTH)
Space processing of electronic materials — determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161892] N82-11094
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161891] N82-11958

MEMORY
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79336] N82-11762
Time and information model of human Memory Organization N82-11763

MERCURY (PLANET)
Planetary radar N82-11309

MERCURY CADMIUM TELLURIDES
Space processing of electronic materials — determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161892] N82-11094
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161891] N82-11958

MERIDIONAL FLOW
Meridional heat transport at the onset of winter stratospheric warming
[NASA-TM-76614] N82-11697

MESOSCALE PHENOMENA
An assessment of detecting mesoscale rainfall from mid-latitude cyclones using GOES imagery data
[AD-A104377] N82-11726
Hawaii mesoscale energy and climate project (HAMEC). 2: P-3 aircraft data sets
[PB81-224198] N82-11747

METABOLISM
Hydrogen production from the photosynthetic bacterium Rhodopseudomonas sphaeroides
[DE81-025831] N82-11256

METAL BONDING
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206

METAL COATINGS
Coated-limiter testing in Tokamaks
[DE81-027665] N82-11951

METAL CRYSTALS
Liquid and solid metal embrittlement
[AD-A103046] N82-11187

METAL FATIGUE
Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11189
Electrochemical conditions within stress corrosion cracks (experimental techniques)
[AD-A104246] N82-11497

METAL HYDRIDES
Hydride chemical compressor, phase 1
[DE81-030199] N82-11155
Technical and economic aspects of hydrogen storage in metal hydrides
[NASA-TM-76610] N82-11223
The storage of hydrogen in the form of metal hydrides: An application to thermal engines
[NASA-TM-76609] N82-11225

METAL IONS
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206

METAL MATRIX COMPOSITES
Thermal expansion of metal matrix composites — acousto-optic study of microcracks and temperature measurement
[AD-A104680] N82-11134
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890

METAL PLATES
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161867] N82-11181
Eddy current flows around cracks in thin plates for nondestructive testing
[AD-A104407] N82-11481

METAL SURFACES
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025463] N82-11193
Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11198
Trapping and surface permeation of deuterium in Fe, Ni and stainless steel: An ion-beam study
[DE81-023308] N82-11201
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

METAL VAPOR LASERS
Characteristics of pulse gold vapor laser outlined N82-11450

METAL VAPORS
Selected studies of four high-temperature air-pollution sources N82-11680

METALLIC GLASSES
Application of solidification theory to rapid solidification processing — alloys and metallic glasses
[AD-A104561] N82-11214

METEOROIDS
Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11969

METEOROLOGICAL PARAMETERS
Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056
Operational environment, meteorological conditions and weather forecasting N82-11057
Data collection and processing for the ACES -- annual cycle energy system demonstration house
[DE81-030630] N82-11555
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104595] N82-11729
US Monsoon Experiment MONEX rawinsonde/radiometersonde system
[PB81-222937] N82-11736
The determination of navigational and meteorological variables measured by NOAA/RFC WP3D aircraft
[PB81-225468] N82-11743

METEOROLOGICAL RADAR
Doppler radar data analysis during fiscal year 1980
[PB81-225476] N82-11742

METEOROLOGICAL SERVICES
A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530

METEOROLOGY
National Center for Atmospheric Research
[NCAR/AR-80] N82-11692
Report on research at AFGL
[AD-A104513] N82-11704

METHANATION
Advanced system experimental facility: Solid waste to methane gas. Background and process description
[DE81-030196] N82-11244

METHANE
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029858] N82-11246
Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

METHODOLOGY
Writing effective reports
[PB81-214645] N82-11963

METHOXY SYSTEMS
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204

METHYLENE
Physical studies of aromatic methylenes N82-11113
Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027562] N82-11236

MEXICO
Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164831] N82-11514

Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas — Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

MICHIGAN

Project demonstration of wind-turbine electricity: interconnecting a northern Michigan fruit farm with a major utility
[DE81-030950] N82-11380

Water resources data for Michigan, water year 1980
[PB81-224180] N82-11527

Geology and hydrology for environmental planning in Marquette County, Michigan
[PB81-221467] N82-11534

MICROANALYSIS

Submicron-particle absorption spectroscopy by photothermal modulation of MIE scattered light
[DE81-025096] N82-11160

Energy dispersive X-ray spectrometry: Proceedings of a Workshop on Energy Dispersive X-Ray Spectrometry
[PB81-226334] N82-11177

MICROCOMPUTERS

Microcomputer-controlled communication network for Sandia National Laboratories' environmental test chambers
[DE81-030966] N82-11355

A microprocessor development system for the ALTOS series microcomputers
[AD-A104624] N82-11793

MICROCRACKS

Thermal expansion of metal matrix composites — acousto-optic study of microcracks and temperature measurement
[AD-A104680] N82-11134

MICROELECTRONICS

Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365

MICROFIBERS

Small conductive particle sensor — microfiber size determination
[NASA-CASE-LAR-12552-1] N82-11431

MICROFILMS

Microfiche as a vehicle for technical reports
[PB81-228009] N82-11986

MICROPROCESSORS

Digital control of machine tools
[DE81-029950] N82-11476

Automatic multi-banking of memory for microprocessors
[NASA-CASE-NPO-15295-1] N82-11785

Fidelity optimization of microprocessor system simulations
[AD-A104679] N82-11786

A microprocessor development system for the ALTOS series microcomputers
[AD-A104624] N82-11793

Use of microprocessors in a neutrino experiment
[DE81-026057] N82-11875

MICROSTRIP TRANSMISSION LINES

Cavity-backed, micro-strip dipole antenna array
[NASA-CASE-MSC-18606-1] N82-11336

MICROSTRUCTURE

The quantitative determination of non-metallic inclusions by a mathematical statistical method
[RAE-LIB-TRANS-2066] N82-11179

Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11189

Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029946] N82-11192

Microstructure of amorphous and semi-crystalline polymers
[AD-A102853] N82-11216

Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220

MICROWAVE ANTENNAS

Cavity-backed, micro-strip dipole antenna array
[NASA-CASE-MSC-18606-1] N82-11336

MICROWAVE EMISSION

A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166708] N82-11510

MICROWAVE FREQUENCIES

Strategies for weather-dependent data acquisition
N82-11266

MICROWAVE RADIOMETERS

Antenna pattern modification for single reflector antennas — smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11336

MICROWAVE SENSORS

Technology transfer of NASA microwave remote sensing system
[NASA-CR-165791] N82-11515

MICROWAVE TRANSMISSION

Parametric study of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050

Cryogenic filters for RFI protection N82-11293

Investigation of direct solar-to-microwave energy conversion techniques
[NASA-CR-161883] N82-11544

MIDLATITUDE ATMOSPHERE

Numerical simulation of the dynamics, cloud microphysics and radar echo structures of tropical and mid-latitude convection N82-11722

MIE SCATTERING

Submicron-particle absorption spectroscopy by photothermal modulation of MIE scattered light
[DE81-025096] N82-11160

Light scattering by bubbles in liquids or in glass
[AD-A104241] N82-11912

MILITARY HELICOPTERS

Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104388] N82-11517

MILITARY SPACECRAFT

Military space doctrine: The great frontier
[AD-A104574] N82-11990

MILITARY TECHNOLOGY

Military geodesy and geospace science, unit three
[AD-A105072] N82-11711

Military space doctrine: The great frontier
[AD-A104574] N82-11990

MILK

Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-226979] N82-11275

MINERAL DEPOSITS

Geology of the nahcolite deposits and associated oil shales of the Green River Formation in the Piceance Creek Basin, Colorado N82-11683

MINERAL EXPLORATION

Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-028490] N82-11519

MINERAL METABOLISM

Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773

Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222406] N82-11779

MINES (EXCAVATIONS)

Use of a vegetative filter zone to control fine-grained sediments from surface mines
[PB81-226110] N82-11674

Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712

MINIATURE ELECTRONIC EQUIPMENT

Tooling for electrochemical deburring
[DE81-030190] N82-11475

MINIATURIZATION

Microstructures for high-energy X-ray and particle-imaging applications
[DE81-026531] N82-11899

MINING

Geologic considerations in underground coal mining system design
[NASA-CR-164961] N82-11516

Coal mine hazard detection using synthetic pulse radar
[PB81-224412] N82-11538

Energy analysis of human ecosystems in an Appalachian coal county
[DE81-025177] N82-11574

Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782

Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783

MINKOWSKI SPACE

Classical field theory with Z(3) symmetry
[DE81-027069] N82-11969

MIRROR FUSION

Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-028269] N82-11906

Plasma confinement in the TMX tandem mirror
[UCRL-85883] N82-11939

MIRRORS

Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209

Secondary and compound concentrators for parabolic dish solar thermal power systems
[NASA-CR-164960] N82-11550

Heliostat operation at the central receiver test facility (1978 - 1980)
[DE81-031926] N82-11556

MIS (SEMICONDUCTORS)

Low temperature growth and electrical characterization of insulators for GaAs MISFETS
[NASA-CR-164972] N82-11959

MISSILE CONTROL

Application of optimal control techniques to tactical missile guidance N82-11086

MISSILE DESIGN

Outsider's look at flight instrumentation
[DE81-025409] N82-11066

MISSION PLANNING

A proposed new policy for planetary protection
[NASA-CR-164947] N82-11095

MISSOURI RIVER (US)

Synthetic fuel development for the Upper Missouri River Basin. Section 13: Water assessment report
[PB81-224537] N82-11276

MIXING

Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11660

Airway gas mixing during rest and bicycle exercise
N82-11766

MIXING CIRCUITS

Large gain, negative resistance, and oscillations in superconducting quasiparticle heterodyne mixers
[AD-A104534] N82-11361

MIXTURES

Development and optimization of methodologies for analysis of complex hydrocarbon mixtures
[DE81-025875] N82-11114

MODAL RESPONSE

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 1: Investigation of resonance extraction procedures — for target recognition
[AD-A104530] N82-11350

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 2: Appendices — for target recognition
[AD-A104531] N82-11351

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 3: Translation of Prony's method — for target recognition
[AD-A104532] N82-11352

Advanced superposition methods for high speed turbopump vibration analysis
[NASA-CR-165379] N82-11465

Modal analysis using a Fourier analyzer, curve-fitting, and modal tuning
[NASA-CR-161886] N82-11490

On-line failure detection of vibrating structures
[UCRL-86099] N82-11505

MODEMS

Symbol error rate performance evaluation of the LM37 multimegabit telemetry modulator-demodulator unit N82-11289

MODULATION

Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027298] N82-11462

MODULATION TRANSFER FUNCTION

Modulation/demodulation techniques for satellite communications. Part 4: Appendices
[NASA-CR-164954] N82-11341

MODULUS OF ELASTICITY

Quasi-elastic high-pressure waves in 2024 Al and Cu
[DE81-025334] N82-11871

MOIRE FRINGES

Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434

MOISTURE CONTENT

Semiconductor measurement technology ARPA/NBS Workshop Moisture Measurement Technology for Hermetic Semiconductor Devices
[PB81-220733] N82-11384

MOLDS

New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11067

MOLECULAR BEAM EPITAXY

Development of MBE grown Pb-salt semiconductor lasers for the 8.0 to 15.0 micrometer spectral region
[NASA-CR-165663] N82-11453

MOLECULAR BEAMS

Molecular-beam system for the study of transient combustion processes
[DE81-030663] N82-11872

Use of molecular beams to support microspheres during plasma coating
[DE81-025601] N82-11873

MOLECULAR CLOUDS

Observations of molecular clouds containing reflection nebulae N82-11999

MOLECULAR ENERGY LEVELS

An electrostatic model for energies of molecules in solution N82-11869

MOLECULAR EXCITATION

Vibrational sensitization of of 14N14NO, 15N14NO and H2O by laser excited SF6 N82-11143

Stimulated Raman studies of CO2-laser-excited SF6
[DE81-025829] N82-11463

MOLECULAR FLOW

Molecular spectroscopy and relaxation in supersonic beams N82-11867

MOLECULAR IONS

Role of excited states of molecular ions in structure studies with high-energy collisions
[DE81-023898] N82-11881

MOLECULAR ORBITALS

Physical studies of aromatic methylenes N82-11113

Charge transfer in collisions of Li-3(+) and Be-4(+) ions with atomic hydrogen at low impact energy
[IPPJ-532] N82-11927

MOLECULAR SPECTROSCOPY

Molecular spectroscopy and relaxation in supersonic beams N82-11867

MOLECULAR STRUCTURE

A structural study of aluminosilicate glasses by Raman spectroscopy N82-11138

Soot formation in synfuels
[DE81-030273] N82-11164

Effects of ionizing radiation on the chemical structure, crystalline content and molecular weight distribution of various Teflon resins N82-11203

Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957

MOLTEN SALT ELECTROLYTES

Rechargeable molten-salt cells
[DE81-027091] N82-11595

MOLYBDENUM

Statistical versus valence neutron neutron capture in Mo-98
[DE81-023943] N82-11880

Analysis of standard reference materials by absolute INAA
[DE81-025925] N82-11900

MOMENTS

A general moment inequality for the maximum of rectangular partial sums of multiple series
[AD-A104475] N82-11828

MONITORS

Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991

Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992

MONOCHROMATIC RADIATION

Application of visible monochromatic auroral imaging data for modeling infrared Earth-limb morphology
[AD-A104343] N82-11706

MONOMOLECULAR FILMS

Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

MONTE CARLO METHOD

Monte Carlo calculations of the melting point of iron at core pressures N82-11681

Validation of a Monte Carlo simulation of binary time series
[AD-A104525] N82-11838

Bounded limit for the Monte Carlo point-flux-estimator
[DE81-026526] N82-11883

M-alpha emission from a disk in the close binary U Cephei: A Monte Carlo simulation N82-12001

MOON

Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11989

MORPHOLOGY

Application of visible monochromatic auroral imaging data for modeling infrared Earth-limb morphology
[AD-A104343] N82-11706

MOUNTING

Clamp-mount device
[NASA-CASE-MFS-25510-1] N82-11470

MULTICHANNEL COMMUNICATION

Multiaccess of a slotted channel by finitely many users
[AD-A104417] N82-11349

MULTIPLICATION

On permanents and diagonal products of doubly stochastic matrices N82-11832

MULTIPOLES

Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11888

MULTIPROCESSING (COMPUTERS)

Distributed computation of fixed points
[AD-A104418] N82-11791

MULTISPECTRAL PHOTOGRAPHY

Identification of lithologic units using multichannel imaging systems N82-11509

MULTIVARIATE STATISTICAL ANALYSIS

Methods for presentation and display of multivariate data
[NASA-CR-165788] N82-11833

Projection pursuit methods for data analysis
[DE81-027493] N82-11842

MUONS

Elastic and inelastic psi production by muons
[DE81-025326] N82-11877

MUSCULAR FUNCTION

Electron microscopical and histochemical studies on the transverse striated muscles of birds after prolonged hypokinesia
[NASA-TM-76717] N82-11759

N

N-TYPE SEMICONDUCTORS

A study of metal-semiconductor contacts on indium phosphide
[AD-A104439] N82-11965

NACELLES

Low speed testing of the inlets designed for a tandem-fan V/STOL nacelle — conducted in the Lewis 10 by 10 foot wind tunnel
[NASA-TM-82728] N82-11042

NASA PROGRAMS

Lewis Research Center's coal-fired, pressurized, fluidized-bed reactor test facility
[NASA-TM-81616] N82-11397

NASA Patent Abstracts bibliography: A continuing bibliography, section 1, abstracts. Supplement 19
[NASA-SP-7039(19)-SEC-1] N82-11981

NASA Patent Abstracts Bibliography: A continuing bibliography, section 2, indexes. Supplement 19
[NASA-SP-7039(19)-SEC-2] N82-11982

NASCOM NETWORK

DSN ground communication facility N82-11282

NATURAL GAS

Brayton/Rankine 10-ton gas-fired space conditioning system, phase 2
[PB81-223372] N82-11478

Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029851] N82-11518

Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309] N82-11657

NATURAL GAS EXPLORATION

Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222604] N82-11655

NAVIER-STOKES EQUATION

Some observations on a new numerical method for solving Navier-Stokes equations
[NASA-TP-1934] N82-11032

Computation of high Reynolds number internal/external flows
[NASA-TM-84049] N82-11046

A computer solution to the stationary Navier-Stokes equations in two dimensions with proven convergence
[NASA-TM-81300] N82-11396

NAVIGATION

Flight trajectory control investigation
[AD-A104542] N82-11048

An overview of optimal control in aerospace systems N82-11074

The determination of navigational and meteorological variables measured by NOAA/RFC WP3D aircraft
[PB81-225488] N82-11743

NAVIGATION AIDS

The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

NEBULAE

Observations of molecular clouds containing reflection nebulae N82-11999

Photoelectric surface brightness observations and the geometry of reflection nebulae N82-12002

NEGATIVE RESISTANCE CIRCUITS

Large gain, negative resistance, and oscillations in superconducting quasiparticle heterodyne mixers
[AD-A104534] N82-11361

NEPHANALYSIS

An analysis of cloud property retrieval using infrared sounder data
[PB81-221606] N82-11732

NETWORK ANALYSIS

Projected Newton methods and optimization of multicommodity flows
[AD-A104419] N82-11844

NETWORK CONTROL

Concept for a power system controller for large space electrical power systems
[NASA-TP-1939] N82-11100

NEUTRAL BEAMS

Electron-temperature requirememts for neutralized inertial-confinement-fusion light-ion beams
[DE81-025352] N82-11884

Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11888

Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929

NEUTRALIZERS

Particle trajectories in a model electric field 1 — neutralizing spacecraft surfaces
[AD-A104507] N82-11870

NEUTRINOS

Use of microprocessors in a neutrino experiment
[DE81-026057] N82-11875

NEUTRON ACTIVATION ANALYSIS

Mechanistic analysis of loft pulsed neutron activation data — pipe flow velocity
[DE81-027124] N82-11876

Analysis of standard reference materials by absolute INAA
[DE81-025925] N82-11900

NEUTRON BEAMS

Proton induction linacs as high-intensity neutron sources
[DE81-025825] N82-11878

NEUTRON CROSS SECTIONS

Improved calculations of energy deposition from fast neutrons
[DE81-025385] N82-11885

NEUTRON DISTRIBUTION
Statistical versus valence neutron neutron capture in Mo-98
[DE81-023943] N82-11880
NEUTRON IRRADIATION
Improved calculations of energy deposition from fast neutrons
[DE81-025385] N82-11885
NEUTRON SOURCES
Proton induction linacs as high-intensity neutron sources
[DE81-025825] N82-11878
Source-to-incident-flux relation in a Tokamak blanket module
[DE81-026524] N82-11941
NEUTRONS
Calculation procedures for the analysis of integral experiments for fusion-reactor design
[DE81-027626] N82-11949
NEVADA
Principal facts, accuracies, sources, base station descriptions, and plots for 1380 gravity stations in the Tonopah 1 deg by 2 deg Quadrangle, Nevada
[PB81-219081] N82-11716
NEW HAMPSHIRE
New Hampshire and Vermont point source inventory update for NECRMP
[PB81-219339] N82-11672
NEW YORK
Ethanol production in southern tier east region of New York: Technical and economic feasibility
[PB81-226079] N82-11275
Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533
A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669
NICKEL ALLOYS
Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180
Irradiation-induced swelling in commercial alloys
[DE81-029755] N82-11191
Stability of permanent-magnet parameters
[DE81-027013] N82-11852
NICKEL COMPOUNDS
Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185
NICKEL STEELS
Effects of alloying on aging and hardening processes of steel with 20% nickel
[NASA-TM-76624] N82-11186
Crack arrest properties of a 9 percent nickel cryogenic steels
[PB81-227993] N82-11202
NICKEL ZINC BATTERIES
Investigation of the zinc electrode reaction — nickel zinc batteries
[DE81-030221] N82-11368
Development of battery separator composites
[NASA-CR-165506] N82-11547
NIMBUS 7 SATELLITE
Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511
NIOBIUM
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11966
NITROGEN COMPOUNDS
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632
NITROGEN OXIDES
Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-029071] N82-11641
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
NODES (STANDING WAVES)
System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861
NOISE (SOUND)
Quiet bearing surface characterization
[AD-A104412] N82-11472
NOISE MEASUREMENT
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860
NOISE POLLUTION
Effects of aircraft noise on the equilibrium of airport residents: Testing and utilization of a new methodology
[NASA-TM-76626] N82-11836
NOISE PREDICTION (AIRCRAFT)
Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11859
NOISE REDUCTION
Handbook for industrial noise control
[NASA-SP-5108] N82-11858
NOISE SPECTRA
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860
Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960
NOISE TEMPERATURE
Surface resistivity measurements of candidate subreflector surfaces N82-11300
NONDESTRUCTIVE TESTS
Eddy current flows around cracks in thin plates for nondestructive testing
[AD-A104407] N82-11481
Detection of vibrations in metallic structures using small passive magnetic fields
[AD-A104405] N82-11495
Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773
Digital ultrasonics signal processing: Flaw data post processing use and description
[NASA-CR-161882] N82-11862
NONELECTROLYTES
The volumes and heat capacities of nonelectrolytes and organic electrolytes in methanol at 25 C
N82-11142
NONEQUILIBRIUM THERMODYNAMICS
Is geothermal simulation a catastrophe?
[DE81-026750] N82-11588
NONLINEAR EQUATIONS
Classical field theory with Z(3) symmetry
[DE81-027089] N82-11969
NONLINEAR OPTICS
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967
NONLINEAR SYSTEMS
Theory of stochastic optimal control some basic notions N82-11075
Application of nonlinear systems inverses to automatic flight control design: System concepts and flight evaluations N82-11083
Nonparametric identification of a class of nonlinear close-coupled dynamic systems
[NASA-CR-164948] N82-11096
Sensitivity theory for nonlinear systems. 2: Extensions to additional classes of responses
[DE81-030258] N82-11845
Physics in few dimensions — condensed matter physics
[DE81-026054] N82-11853
Nonlinear waves on charged particle beams
N82-11865
Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006
NONLINEARITY
Some problems in the calculation of flows with tangential discontinuities
[RAE-LIB-TRANS-2059] N82-11389
Multilinear pseudodifferential operators and paraproducts N82-11825
NONPARAMETRIC STATISTICS
Applications of non-parametric statistics and analysis of variance on sample variances
[NASA-CR-165789] N82-11834
A note on a nonparametric maximum penalized likelihood estimator of the probability density function of a positive random variable. AMPLE with positive support
[AD-A104476] N82-11838
NONUNIFORM FLOW
A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-8109] N82-11037
NONUNIFORM PLASMAS
Oblique propagation of electron thermal modes below the electron plasma frequency without boundary effects
[IPPJ-533] N82-11928
NORMAL DENSITY FUNCTIONS
An ultrasonic transducer with Gaussian radial velocity distribution N82-11130
NORTH DAKOTA
Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524
Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525
NORWAY
Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-904014] N82-11520
NOSE CONES
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104
NOVA LASER SYSTEM
Nova pulse power system description and status
[DE81-025600] N82-11896
NOZZLE DESIGN
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
NOZZLE FLOW
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
On transonic flow in hyperbolic Laval nozzles — the conformal curvilinear coordinate method
N82-11020
Compression processes of free pistons after the opening of nozzle in a hypersonic gun tunnel
N82-11021
Prediction of turbulent boundary layer separation
N82-11022
NOZZLE INSERTS
Wind tunnel supplementary Mach number minimum section insert
[NASA-CASE-LAR-12532-1] N82-11068
NUCLEAR AUXILIARY POWER UNITS
Space nuclear safety and fuels program
[DE81-030501] N82-11891
NUCLEAR CAPTURE
Statistical versus valence neutron neutron capture in Mo-98
[DE81-023943] N82-11880
NUCLEAR FUELS
Space nuclear safety and fuels program
[DE81-030501] N82-11891
Production and characterization of pure cryogenic inertial fusion targets
[DE81-025820] N82-11937
Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952
NUCLEAR FUSION
Fusion as a source of synthetic fuels
[BNL-29281] N82-11257
Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-026289] N82-11906
Plasma assessments for the Fusion Engineering Device (FED)
[DE81-024254] N82-11948
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025568] N82-11954
NUCLEAR REACTORS
Trap activation model for hydrogen retention and isotope exchange in some refractory materials
[DE81-025995] N82-11221
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025568] N82-11954

NUCLEAR SCATTERING
Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026061] N82-11775

NUCLEATION
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204

NUCLEOTIDES
Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

NUMERICAL ANALYSIS
A three-dimensional simulation of transition and early turbulence in a time-developing mixing layer
[NASA-CR-164942] N82-11393
Difference method in fluid dynamics. 1. Numerical solution of two dimensional vorticity equation
N82-12022
Numerical computation and analysis of the flow field in a large shock tube with a variable cross-sectional area N82-12026

NUMERICAL CONTROL
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11436
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-028573] N82-11810

NUMERICAL FLOW VISUALIZATION
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-6112] N82-11036
A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-6109] N82-11037
Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-6110] N82-11038
A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite element algorithm
[AD-A104514] N82-11055
Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395

NUTS (FRUITS)
Liners of natural porous materials to minimize pollutant migration
[PB81-221663] N82-11683

O

OCEAN BOTTOM
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations
N82-11685
Wave propagation over rectangular trench
[PB81-220782] N82-11752
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857

OCEAN CURRENTS
Critical wave conditions for sand motion initiation
[AD-A104376] N82-11400
Ocean energy-waves, currents, and tides
[DE81-025706] N82-11611
Oceans and ocean currents: Their influence on climate
[DE81-027263] N82-11731
An inverse technique for determination of mean ocean circulation N82-11756

OCEAN DATA ACQUISITIONS SYSTEMS
Technology transfer of NASA microwave remote sensing system
[NASA-CR-165791] N82-11515

OCEAN SURFACE
Relationships between synoptic storm activity and sea surface temperature anomalies over the North Pacific Ocean
[AD-A104580] N82-11727
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104586] N82-11729
Climate Diagnostics Workshop (5th) annual proceedings
[PB81-222200] N82-11735
Numerical studies of hurricane-ocean interactions
[PB81-225575] N82-11741

OCEAN THERMAL ENERGY CONVERSION
Ocean thermal energy conversion gas-desorption studies. Volume 2: Deaeration in a packed column and a barometric intake system
[DE81-030469] N82-11619
OTEC environmental biological oceanographic program
[DE81-027402] N82-11645

OCEANOGRAPHIC PARAMETERS
Technology transfer of NASA microwave remote sensing system
[NASA-CR-165791] N82-11515
Oceans and ocean currents: Their influence on climate
[DE81-027263] N82-11731
Conditional sampling of oceanic temperature and pressure
[AD-A104539] N82-11751

OFFSHORE ENERGY SOURCES
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029951] N82-11518
Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-904014] N82-11520
Oceans and ocean currents: Their influence on climate
[DE81-027263] N82-11731

OHIO
Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528

OHMIC DISSIPATION
Energy losses in conductors carrying very high currents
[DE81-025367] N82-11373

OIL EXPLORATION
Plan for technological research and development related to the petroleum activities on the Norwegian Continental Shelf. 1981-1985: Appendixes: 1. Technical challenges. 2. Research requirements. 3. High priority programs
[DE81-904014] N82-11520

OIL FIELDS
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029951] N82-11518

OIL POLLUTION
Detection of oil in water by a flame emission technique
[PB81-226185] N82-11178

OIL RECOVERY
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153

OKLAHOMA
COCORP traverses in Wyoming and Oklahoma
N82-11584

ON-LINE SYSTEMS
On-line failure detection of vibrating structures
[UCRL-86099] N82-11505
Engineering Analysis System (EASY)
[DE81-027508] N82-11846
Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991
Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992

OPERATING COSTS
Networks consolidation program: Maintenance and Operations (M&O) staffing estimates N82-11303

OPERATING SYSTEMS (COMPUTERS)
Some notes on operating-system principles
[DE81-030675] N82-11818

OPERATIONAL AMPLIFIERS
Low noise tuned amplifier
[NASA-CASE-GSC-12567-1] N82-11359

OPERATIONAL HAZARDS
Investigation of Lithium Sulfur Dioxide (Li/SO2) battery safety hazard
[AD-A104326] N82-11552

OPERATIONAL PROBLEMS
Photovoltaic operations manual radio station WBNO
[DE81-027439] N82-11803

OPERATORS (MATHEMATICS)
Multilinear pseudodifferential operators and paraproducts N82-11825

OPTICAL COMMUNICATION
The deep space optical channel. 2: Wave propagation effects N82-11286
InGaAsP/InP laser development for single-mode, high-data-rate communications
[NASA-CR-3477] N82-11452
Local distribution fiber optic cable communication system
[AD-A104491] N82-11911

OPTICAL EQUIPMENT
Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456

OPTICAL FILTERS
Binary/analog CCD correlator development
[AD-A104436] N82-11363

OPTICAL MEASURING INSTRUMENTS
Soot formation in synfuels
[DE81-030273] N82-11164
Reflection/transmission phase shift interferometer and viewing optics
[DE81-027658] N82-11916

OPTICAL PROPERTIES
Polishing-to-figuring transition in turned optics
[DE81-028691] N82-11917
High-pressure optical studies
[DE81-025577] N82-11918
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

OPTICAL PUMPING
Investigation of direct solar-to-microwave energy conversion techniques
[NASA-CR-161863] N82-11544

OPTICAL RESONANCE
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

OPTICAL SCANNERS
Reliability and maintainability assessment report for laser scanner image generation system, revision A
[AD-A104239] N82-11455

OPTICAL WAVEGUIDES
Single mode optical waveguide design investigation
[AD-A104584] N82-11913
Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920

OPTIMAL CONTROL
Flight trajectory control investigation
[AD-A104542] N82-11048
Theory and applications of optimal control in aerospace systems
[AGARD-AG-251] N82-11073
An overview of optimal control in aerospace systems N82-11074
Theory of stochastic optimal control some basic notions N82-11075
An introduction to stochasic optimal control theory
N82-11076
Design considerations for optimal flight control systems N82-11077
Design techniques for multivariable flight control systems N82-11078
Control law design for transport aircraft flight tasks
N82-11080
Control design of flexible spacecraft N82-11081
Optimum climb and descent trajectories for airline missions N82-11082
Management of redundancy in flight control systems using optimal decision theory N82-11084
Optimal control in the lunar module digital autopilot
N82-11085
Application of optimal control techniques to tactical missile guidance N82-11086
An algorithm for minimum-cost set-point ordering in a cryogenic wind tunnel
[NASA-TP-1923] N82-11090
Partial differential equations from dynamic programming equations N82-11822

OPTIMIZATION
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018
An optimization model for energy generation and distribution in a dynamic facility N82-11310
Computer-aided heat-pump design and optimization
[DE81-024985] N82-11415
Modeling energy-conservation potentials of community energy-system technologies
[DE81-026059] N82-11589
Fidelity optimization of microprocessor system simulations
[AD-A104679] N82-11786
Projected Newton methods and optimization of multicommodity flows
[AD-A104419] N82-11844

ORBIT TRANSFER VEHICLES
Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161868] N82-11889

ORBITAL LAUNCHING
Mission operation report: RCA-D/Delta launch
[NASA-TM-84063] N82-11102

ORBITAL SPACE STATIONS
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093

ORDER-DISORDER TRANSFORMATIONS
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11196

OREGON
Water resources data for Oregon, water year 1979
[PB81-226771] N82-11542

ORGANIC CHEMISTRY
Shock-induced organic chemistry
[DE81-024442] N82-11115

ORGANIC COMPOUNDS
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 1, phase 2
[AD-A104552] N82-11484
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 2, phase 2
[AD-A104553] N82-11485
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632
Liquid-liquid chromatography fractionation of organic compounds in complex mixtures: Application to automobile exhaust
[DE81-030743] N82-11650

ORGANIC SILICON COMPOUNDS
Thermal control coatings based on trialkoxysilane hydrolysate binders — tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118

ORGANOMETALLIC COMPOUNDS
Antireflecting film development — for resisting damage from laser pulses
[DE81-030010] N82-11915

ORION CONSTELLATION
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025336] N82-12005

ORTHOGONAL FUNCTIONS
Tropical storm movement based on synoptic map typing using empirical orthogonal functions
[AD-A104591] N82-11728
Nonclassical orthogonal polynomials and differential equations N82-11823

ORTHOGONALITY
The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015

OTOLITH ORGANS
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Otolithic reflex and space perception function of cosmonauts N82-11764

OUTER SPACE TREATY
Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11989

OUTGASSING
Outgassing of two synthetic fuels
[AD-A104580] N82-11231

OXIDATION
Peat biogasification development program
[DE81-026299] N82-11243
Vapor-phase cracking and wet oxidation as potential pollutant control techniques for coal gasification
[PB81-219594] N82-11661

OXIDATION RESISTANCE
Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76608] N82-11120

OXIDES
Innovative technology for fabrication of ceramics: EDS rapid solidification process application to specialized materials
[PB81-214666] N82-11222

OXYGEN ATOMS
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11879

OXYGEN METABOLISM
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

OXYGEN PRODUCTION
Direct observation of excited oxygen atom production and deactivation N82-11868

OXYGEN SUPPLY EQUIPMENT
Recommended guidelines for oxygen self-rescuers. Volume 1: Underground coal mining
[PB81-225872] N82-11782
Recommended guidelines for oxygen self-rescuers. Volume 2: Appendices
[PB81-225880] N82-11783

OZONE
Report of Lawrence Livermore National Laboratory to the Federal Aviation Agency on the high-altitude pollution program, 1980
[DE81-028264] N82-11647

OZONOMETRY
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779

P

P-N JUNCTIONS
Analysis of indium-phosphide/indium tin oxide solar cells
[DE81-025907] N82-11610

P-TYPE SEMICONDUCTORS
Growth of silicon sheets from metallurgical-grade silicon
[DE81-025703] N82-11605
A study of metal-semiconductor contacts on indium phosphide
[AD-A104439] N82-11965

PACIFIC NORTHWEST (US)
Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521

PACIFIC OCEAN
Relationships between synoptic storm activity and sea surface temperature anomalies over the North Pacific Ocean
[AD-A104590] N82-11727
Tropical storm movement based on synoptic map typing using empirical orthogonal functions
[AD-A104591] N82-11728
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104595] N82-11729
Comparison of ocean and island rainfall in the tropical South Pacific, Atlantic, and Indian Oceans
[PB81-225401] N82-11745

PACKET TRANSMISSION
Packet Speech Systems Technology
[AD-A104373] N82-11348

PACKETS (COMMUNICATION)
Packet Speech Systems Technology
[AD-A104373] N82-11348

PAINTS
Manganese glass-molybdenum metallized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11218

PAIR PRODUCTION
Detection and study of new heavy particles through jet identification
[DE81-025151] N82-11882
The Bogoliubov transformation and its application to cosmological particle production N82-12009
A model of the normal and null states of pulsars
[PB81-215907] N82-12011

PALLADIUM
Electronic structure and many-body effects in Pd
[DE81-023110] N82-11970

PARABOLIC DIFFERENTIAL EQUATIONS
Boundary observability and controllability for diffusion equations
[AD-A104293] N82-11829

PARABOLIC REFLECTORS
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029881] N82-11576

PARACHUTES
Use of a hybrid computer for the flight simulation of a bomb/parachute system
[DE81-025141] N82-11797

PARALLEL PROCESSING (COMPUTERS)
Multiple-instruction, multiple-data path computers: Parallel processing impact on flight simulation software
[AD-A104506] N82-11789
Philosophy of supercomputing
[DE81-028586] N82-11796
SAR processing on the MPP
[NASA-CR-166726] N82-11801

PARAMETER IDENTIFICATION
Parametric study of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050
Nonparametric identification of a class of nonlinear close-coupled dynamic systems
[NASA-CR-164948] N82-11098
Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164971] N82-11099
Modulation/demodulation techniques for satellite communications. Part 4: Appendices
[NASA-CR-164954] N82-11341

PARAMETERIZATION
Parametric sensitivity study for solar-assisted heat-pump systems
[DE81-030309] N82-11407
Storage ring injection
[DE81-023846] N82-11901
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006

PARTIAL DIFFERENTIAL EQUATIONS
Partial differential equations from dynamic programming equations N82-11822

PARTICLE ACCELERATION
A model of the normal and null states of pulsars
[PB81-215907] N82-12011

PARTICLE ACCELERATOR TARGETS
Use of molecular beams to support microspheres during plasma coating
[DE81-025601] N82-11873
Production and characterization of pure cryogenic inertial fusion targets
[DE81-025920] N82-11937
Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952

PARTICLE ACCELERATORS
Considerations for the design, implementation, and effective operation of Sandia's super-power generators
[DE81-025404] N82-11906

PARTICLE BEAMS
Nonlinear waves on charged particle beams
N82-11865
Modular accelerator interconnecting and operating systems for PBFA-1
[DE81-025397] N82-11887
Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952

PARTICLE DIFFUSION
Diffusivity of particles moving rapidly through a turbulent fluid
[DE81-030414] N82-11408
PARTICLE EMISSION
Microstructures for high-energy X-ray and particle-imaging applications
[DE81-029631] N82-11899
PARTICLE FLUX DENSITY
The angular impact distribution of charged particles attracted to a charged cylindrical spacecraft
[AD-A104619] N82-11108
PARTICLE INTERACTIONS
Heavy ion beam interaction and energy partition in the initial stages of ICF target irradiation
[DE81-025296] N82-11903
PARTICLE SIZE DISTRIBUTION
Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029946] N82-11192
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637
Chebyshev polynomial approximation in the OPAQUE program
[AD-A104317] N82-11638
PARTICLE THEORY
Detection and study of new heavy particles through jet identification
[DE81-025151] N82-11882
PARTICLE TRAJECTORIES
Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429
Particle trajectories in a model electric field 1 --- neutralizing spacecraft surfaces
[AD-A104507] N82-11670
Ion-reversibility studies in amorphous solids using the two-atom scattering model
[DE81-025188] N82-11866
PARTICLES
Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654
A theoretical and experimental investigation of the photometric functions of particulate surfaces
N82-12012
PARTICULATE SAMPLING
Informational report on the measurement and characterization of diesel exhaust emissions
[PB81-221251] N82-11175
Airborne radiological sampling of Mount St. Helens plumes
[PB81-213795] N82-11659
PARTITIONS (STRUCTURES)
Racking tests of non-structural building partitions (The behavior of architectural (nonstructural) building components during earthquakes)
[PB81-220790] N82-11328
PASSENGER AIRCRAFT
Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11068
PASSIVITY
Thin-film polycrystaline silicon solar cells: Progress and problems
[DE81-025704] N82-11608
PATENT POLICY
NASA Patent Abstracts bibliography: A continuing bibliography, section 1, abstracts. Supplement 19
[NASA-SP-7039(19)-SEC-1] N82-11981
NASA Patent Abstracts Bibliography: A continuing bibliography, section 2, indexes. Supplement 19
[NASA-SP-7039(19)-SEC-2] N82-11982
PATTERN RECOGNITION
Identification of lithologic units using multichannel imaging systems N82-11509
The quantitative recognition and evaluation of seismic quiescence: Applications to earthquake prediction and subduction zone tectonics
N82-11682
PAVEMENTS
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Probabilistic modeling of subgrade soil strengths
[AD-A104338] N82-11315
Evaluation of base courses for flexible pavements
[PB81-218372] N82-11329
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500
PAYLOAD DELIVERY (STS)
Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161888] N82-11869
PCM TELEMETRY
Control and data transmission system for a balloon-borne ion mass spectrometer
[AD-A104512] N82-11438
PDP 11 COMPUTER
Digital ultrasonics signal processing: Flaw data post processing use and description
[NASA-CR-161882] N82-11862
PEAT
Peat biogasification development program
[DE81-028299] N82-11243
PEBBLE BED REACTORS
KUGEL: A thermal, hydraulic, fuel performance and gaseous fission product release code for pebble bed reactor core analysis
[DE81-026561] N82-11904
PENNSYLVANIA
Calculations from compliance emissions of long and short term SO2 concentrations in the southwest Pennsylvania air quality control region
[PB81-226078] N82-11678
PERFORMANCE PREDICTION
Parametric study of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050
Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030262] N82-11151
Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153
The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11548
Computer performance prediction of a data flow architecture
[AD-A104587] N82-11792
Jet impingement heat transfer enhancement for the GPU-3 Stirling engine
[NASA-TM-82727] N82-11993
PERFORMANCE TESTS
Test results of ac superconducting cables
[BNL-29291] N82-11371
Testing and optimizing active rotary flux compressors
[DE81-024376] N82-11378
Laboratory determination of frosting and defrosting losses for a high efficiency air-source heat pump
[DE81-023218] N82-11416
Conduct a state-of-the-art survey of existing knowledge for the design of ground-source heat pumps
[DE81-024084] N82-11420
Heat pump R and D at Oak Ridge National Laboratory
[DE81-024121] N82-11422
Performance predictions and measurements for space-power-system heat pipes
[LA-UR-81-909] N82-11426
Heat-pipe development for high-temperature recuperator application
[LA-UR-81-1414] N82-11428
Performance assessments of precipitation gages for snow measurement
[PB81-218547] N82-11443
Performance testing of the TOLTEC TI-410 concentrating solar collector
[DE81-029994] N82-11617
COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-228425] N82-11798
Perkin-Elmer COBOL R06 Perkin-Elmer model 3240 OS/32 REV 05.02
[PB81-223885] N82-11799
Evaluation of the micro-carburetor
[NASA-CR-164958] N82-11994
Lithium/iron sulfide cell development for electric-vehicle propulsion
[DE81-023570] N82-11996
PERSONNEL MANAGEMENT
Networks consolidation program: Maintenance and Operations (M&O) staffing estimates N82-11303
Applying science and technology to improve local government productivity
[PB81-217966] N82-11978
PESTICIDES
Manual of analytical quality control for pesticides and related compounds in human and environmental samples
[PB81-222721] N82-11171
PETN
Numerical model study of burning and detonation in small PETN-loaded assemblies
[DE81-028594] N82-11162
PHASE CONTROL
System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861
PHASE SHIFT
Electronic structure and many-body effects in Pd
[DE81-023110] N82-11970
PHASE TRANSFORMATIONS
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11198
PHOSPHATES
Evaluation of alpha aluminum phosphate for advanced acoustic wave devices
[AD-A104685] N82-11962
PHOSPHINES
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
PHOSPHORIC ACID FUEL CELLS
Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165505] N82-11545
Oxygen reduction on carbon-supported platinum fuel-cell electrodes in H sub 3 Po sub 4
[DE81-027303] N82-11562
PHOSPHORUS COMPOUNDS
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
PHOTOCATHODES
Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972
PHOTOCHEMICAL REACTIONS
Lasers in materials processing
[DE81-027657] N82-11460
Biologically assisted photoelectrochemical cell
[DE81-025905] N82-11607
Mathematical modeling of photochemical air pollution N82-11629
PHOTODISSOCIATION
Direct observation of excited oxygen atom production and deactivation N82-11868
PHOTOELASTICITY
New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11067
PHOTOELECTRIC CELLS
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027254] N82-11558
PHOTOELECTRIC EMISSION
Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972
Photoelectric surface brightness observations and the geometry of reflection nebulas N82-12002
PHOTOELECTROCHEMICAL DEVICES
Biologically assisted photoelectrochemical cell
[DE81-025905] N82-11607
PHOTOELECTROCHEMISTRY
Biologically assisted photoelectrochemical cell
[DE81-025905] N82-11607

PHOTOELECTRON SPECTROSCOPY
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-023507] N82-11874
PHOTOELECTRONS
Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104384] N82-11703
PHOTOGRAPHIC EMULSIONS
Method for retarding dye fading during archival storage of developed color photographic film — inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432
PHOTOGRAPHIC FILM
Method for retarding dye fading during archival storage of developed color photographic film — inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432
PHOTOIONIZATION
Electron attachment as a probe of photoionization processes in liquid media — pyrene
[DE81-026352] N82-11163
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-023507] N82-11874
PHOTOMETRY
A theoretical and experimental investigation of the photometric functions of particulate surfaces
N82-12012
PHOTOMICROGRAPHY
Computer processing of periodic electron micrographs N82-11815
PHOTONS
Microstructures for high-energy X-ray and particle-imaging applications
[DE81-026531] N82-11899
PHOTOOXIDATION
Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972
PHOTOSYNTHESIS
Hydrogen production from the photosynthetic bacterium Rhodopseudomonas sphaeroides
[DE81-025831] N82-11256
Biologically assisted photoelectrochemical cell
[DE81-025905] N82-11607
PHOTOVOLTAIC CELLS
Mississippi County Community College solar photovoltaic project
[DE81-030669] N82-11554
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025587] N82-11577
Photovoltaic operations manual radio station WBNO
[DE81-027439] N82-11603
Carlisle house: An all-solar electric residence
[DOE/ET-20279/133] N82-11622
PHOTOVOLTAIC CONVERSION
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030982] N82-11566
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030986] N82-11567
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031921] N82-11568
Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569
PHOTOVOLTAIC EFFECT
National photovoltaic program in amorphous materials
[DE81-025906] N82-11606
PHYSICAL CHEMISTRY
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 1, phase 2
[AD-A104552] N82-11484
Research and development of methods for estimating physicochemical properties of organic compounds of environmental concern, part 2, phase 2
[AD-A104553] N82-11485
PHYSICAL EXERCISE
Airway gas mixing during rest and bicycle exercise
N82-11768
Effects of curative treatment emphasizing endurance training on the performance and blood pressure of hypertensive and normotensives
[NASA-TM-76520] N82-11771
PHYSIOLOGICAL EFFECTS
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760
Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222408] N82-11779
PIEZOELECTRIC CRYSTALS
Evaluation of alpha aluminum phosphate for advanced accustic wave devices
[AD-A104665] N82-11962
PIEZOELECTRICITY
The piezomagnetic effect: Limits on detectability using a combined vector and scalar magnetometer array N82-11430
PILOT PLANTS
Advanced system experimental facility: Solid waste to methane gas. Background and process description
[DE81-030198] N82-11244
Solvent-Refined Coal-1 Demonstration Project. Final environmental impact statement, Volume 1 of 2 — coal liquefaction plant at Newman, Kentucky
[DE81-025983] N82-11252
Surface coal gasification
[DE81-030183] N82-11253
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270
Magma Cooling-Tower process pilot-plant demonstration
[DE81-903783] N82-11406
PILOT TRAINING
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091
PIONEER SPACE PROBES
Pioneers 6 through 12 mission support
N82-11285
PIPE FLOW
Controlled Retracting Injection Point (CRIP) system: A modified-stream method for in situ coal gasification
[DE81-026477] N82-11248
Mechanistic analysis of loft pulsed neutron activation data — pipe flow velocity
[DE81-027124] N82-11876
PIPES (TUBES)
Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11493
PISTON ENGINES
Preliminary study of temperature measurement techniques for Stirling engine reciprocating seals
[NASA-CR-165479] N82-11466
PISTONS
Compression processes of free pistons after the opening of nozzle in a hypersonic gun tunnel
N82-11021
Stirling cycle cryogenic cooler --- magnetically suspended pistons
[NASA-CASE-GSC-12697-1] N82-11312
PLAINS
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738
PLANE STRAIN
Analyses of ductile flow and fracture in two dimensions
[DE81-023651] N82-11506
PLANETARY BOUNDARY LAYER
Frontogenesis in the planetary boundary layer of an amplifying, two-dimensional baroclinic wave
N82-11721
PLANETARY ENVIRONMENTS
A proposed new policy for planetary protection
[NASA-CR-164947] N82-11095
PLANETARY EVOLUTION
Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691
Study of the time evolution of the lithosphere
[NASA-CR-164968] N82-11696
PLANFORMS
Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11660
PLANKTON
Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511
OTEC environmental biological oceanographic program
[DE81-027402] N82-11645
PLANT DESIGN
Alternative fuel for the steel industry of Northern Indiana: A prefeasibility study of a central coal gasification project
[DE81-029314] N82-11233
Feasibility and economic study of medium-BTU coal gas blended with high-BTU by product gas as an industrial energy source at Billings, Montana
[DE81-025166] N82-11237
Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620
Environmental protection as an ongoing component of large facilities engineering projects N82-11633
Development, testing, and evaluation of MHD materials and component designs. Volume 1: Executive summary
[DE81-02[illegible]203] N82-11947
PLANTS (BOTANY)
Cattail rhizome-derived alcohol
[DE81-026307] N82-11234
Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671
PLASMA ACCELERATORS
Analytical studies of high-pressure MHD accelerators --- applications to a reentry vehicle test facility
[AD-A104686] N82-11930
PLASMA CONTROL
Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-028269] N82-11906
Plasma confinement in the TMX tandem mirror
[UCRL-85663] N82-11939
PLASMA DENSITY
The effects of toroidal geometry and scattering by density fluctuations on the accessibility and energy deposition of lower hybrid waves N82-11922
PLASMA DIAGNOSTICS
Software design of a general purpose data acquisition and control executive — plasma diagnostics
[DE81-026573] N82-11810
Improvements to a high-frequency fiber-optic system for plasma diagnostics
[DE81-026741] N82-11919
Oblique propagation of electron thermal modes below the electron plasma frequency without boundary effects
[IPPJ-533] N82-11928
PLASMA DRIFT
Theory of drift instabilities and the associated anomalous transport
[IPPJ-REV-1] N82-11924
PLASMA GENERATORS
RF-driven Tokamak reactor with sub-ignited, thermally stable operation
[DE81-029437] N82-11935
PLASMA HEATING
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929

Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029815] N82-11933

RF-driven Tokamak reactor with sub-ignited, thermally stable operation
[DE81-029437] N82-11935

Heating of a dense plasma with an intense relativistic electron beam: Initial observations
[DE81-025348] N82-11945

Physics considerations for the FED limiter
[DE81-027596] N82-11950

PLASMA INTERACTIONS

Ionization fluctuations in collisional ionizing shock waves -- plasma interactions N82-11864

PLASMA JETS

Temperature measurement in turbulent arcs
N82-11921

Analytical studies of high-pressure MHD accelerators -- applications to a reentry vehicle test facility
[AD-A104686] N82-11930

PLASMA OSCILLATIONS

An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926

PLASMA PHYSICS

Telecommunications in cometary environments
[NASA-CR-164956] N82-11340

PLASMA POTENTIALS

Hollow cathode, magnetic multipole ion sources for neutral beam injection N82-11888

PLASMA PUMPING

Physics considerations for the FED limiter
[DE81-027596] N82-11950

PLASMA RADIATION

Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925

PLASMA SLABS

Physics considerations for the FED limiter
[DE81-027596] N82-11950

PLASMA SPRAYING

Use of molecular beams to support microspheres during plasma coating
[DE81-025601] N82-11873

PLASMA TURBULENCE

Temperature measurement in turbulent arcs
N82-11921

Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931

Maximal entropy in fluid and plasma turbulence: A review
[DE81-025388] N82-11946

PLASMA WAVES

Non-linear evolution of an obliquely propagating Langmuir wave N82-11385

The effects of toroidal geometry and scattering by density fluctuations on the accessibility and energy deposition of lower hybrid waves N82-11922

PLASMA-ELECTROMAGNETIC INTERACTION

An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926

PLASMA-PARTICLE INTERACTIONS

Non-linear evolution of an obliquely propagating Langmuir wave N82-11385

PLASMAS (PHYSICS)

Mass spectrometry of the CO2 laser plasma
[AD-A104344] N82-11454

Stimulated Raman scattering in large plasmas
[DE81-026589] N82-11938

PLASMASPHERE

Plasmaspheric, faraday and total electron contents, 1977 and 1978
[AD-A104362] N82-11700

PLASTICS

Determination of pulsed CO2 laser damage thresholds of optical surfaces
[AD-A104424] N82-11456

PLATES (STRUCTURAL MEMBERS)

Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851

PLATES (TECTONICS)

A review of an attempt to create shatter cones with magnetic flyer plate technology
[NASA-CR-164614] N82-11492

PLATING

Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11168

PLATINUM

Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140

PLOTTING

Methods for presentation and display of multivariate data
[NASA-CR-165786] N82-11833

PLUMES

Airborne radiological sampling of Mount St. Helens plumes
[PB81-213795] N82-11659

PLUTONIUM OXIDES

Space nuclear safety and fuels program
[DE81-030501] N82-11891

POINT DEFECTS

Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960

POINT SOURCES

Selected studies of four high-temperature air-pollution sources N82-11680

POISSON RATIO

Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027559] N82-11504

POLAR METEOROLOGY

The 4-day temperature wave in the winter polar stratosphere N82-11720

POLICIES

A proposed new policy for planetary protection
[NASA-CR-164947] N82-11095

POLLUTION CONTROL

Coal gasifier parameters influencing environmental pollutant production
[PB81-221301] N82-11273

An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224982] N82-11477

Intergrated assessment for energy-related environmental standards: A summary of issues and findings
[DE81-028552] N82-11646

Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652

Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222820] N82-11653

Control of utility boiler and gas turbine pollutant emissions by combustion modification, phase 2
[PB81-222267] N82-11654

Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222604] N82-11655

Assessment of hazard potential from combustion of wastes in industrial boilers
[PB81-221869] N82-11656

Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline
[PB81-212037] N82-11658

Vapor-phase cracking and wet oxidation as potential pollutant control techniques for coal gasification
[PB81-219594] N82-11661

Control techniques for sulfur oxide emissions from stationary sources, second edition
[PB81-220048] N82-11662

Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 6: Innovation by regulation: The administration of control technology requirements under the Clean Air Act
[PB81-221618] N82-11664

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 7: Periodic review and technological escalation of performance standards: New source performance standards review process
[PB81-218117] N82-11665

Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 8: Controlled trading and site-specific SIP revisions: Competing for attention in a crowded administrative route
[PB81-218273] N82-11666

Evaluation of exhaust emissions data for diesel engines used in underround mines
[PB81-225377] N82-11673

Use of a vegetative filter zone to control fine-grained sediments from surface mines
[PB81-226110] N82-11674

EPA utility FGD (Flue Gas Desulfurization) survey
[PB81-225773] N82-11679

Handbook for industrial noise control
[NASA-SP-5108] N82-11858

FGDIS primer: Major equipment/component classifications, problem/solution access codes, and definitions related to FGD systems as contained in the Flue Gas Desulfurization Information System (FGDIS)
[PB81-225948] N82-11985

POLLUTION MONITORING

Manual of analytical quality control for pesticides and related compounds in human and environmental samples
[PB81-222721] N82-11171

Detection of oil in water by a flame emission technique
[PB81-226185] N82-11178

Waste-assimilation capacity of the Arkansas River in Pueblo County, Colorado, as it relates to water-quality guidelines and stream classification
[PB81-227340] N82-11540

Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635

Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637

Proof of concept study
[AD-A104338] N82-11639

Trace-element and phase relations in fly ash
[DE81-028555] N82-11643

A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669

Evaluation of exhaust emissions data for diesel engines used in underround mines
[PB81-225377] N82-11673

Better monitoring techniques are needed to assess the quality of rivers and streams, volume 1
[PB81-225286] N82-11675

Better monitoring techniques are needed to assess the quality of rivers and streams, volume 2
[PB81-225294] N82-11676

Technical activities of the Office of Environmental Measurements - 1980
[PB81-227860] N82-11677

Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11758

POLLUTION TRANSPORT

Temperature and solute-transport simulation in streamflow using a Lagrangian reference frame
[PB81-225757] N82-11543

Mathematical modeling of photochemical air pollution N82-11629

Geochemical controls on trace metal transport in aqueous environmental systems N82-11631

Report of Lawrence Livermore National Laboratory to the Federal Aviation Agency on the high-altitude pollution program, 1980
[DE81-028264] N82-11647

Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11648

Calculations from compliance emissions of long and short term SO2 concentrations in the southwest Pennsylvania air quality control region
[PB81-226078] N82-11678

Workbook for estimating the climatology of regional continental scale atmospheric dispersion and deposition over the United States
[PB81-224172] N82-11748

POLOIDAL FLUX

Preliminary activation calculations for the poloidal divertor experiment
[DE81-026525] N82-11942

POLYCRYSTALS
Thin-film polycrystaline silicon solar cells: Progress and problems
[DE81-025704] N82-11608

POLYETHER RESINS
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212

POLYIMIDE RESINS
Novel improved PMR polyimides
[NASA-TM-82733] N82-11117

POLYIMIDES
Novel improved PMR polyimides
[NASA-TM-82733] N82-11117
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206

POLYMORPHISM
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204

POLYNOMIALS
Nonclassical orthogonal polynomials and differential equations N82-11823
Numerical differentiation of noisy data
[AD-A104631] N82-11831

POLYTETRAFLUOROETHYLENE
Effects of ionizing radiation on the chemical structure, crystalline content and molecular weight distribution of various Teflon resins N82-11203

POLYURETHANE FOAM
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212

POLYURETHANE RESINS
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494

POROUS MATERIALS
Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system — Lewis icing research tunnel
[NASA-CR-164966] N82-11052
Castable high temperature fractory materials
[NASA-CASE-LEW-13060-2] N82-11210
Mean values and an inverse problem for porous media flow
[DE81-027210] N82-11411

POSITION (LOCATION)
New Hampshire and Vermont point source inventory update for NECRMP
[PB81-219339] N82-11672

POSTMISSION ANALYSIS (SPACECRAFT)
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101

POTASSIUM
Mass spectrometric studies of MHD slag thermochemistry
[PB81-221434] N82-11173
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239

POTENTIAL ENERGY
Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957

POTENTIAL FLOW
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036
Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-8110] N82-11038
Calculations of transonic potential flow over cascades
[NASA-CR-165471] N82-11041

POTENTIAL GRADIENTS
Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-904210] N82-11383

POWDER (PARTICLES)
Innovative technology for fabrication of ceramics: EDS rapid solidification process application to specialized materials
[PB81-214868] N82-11222
Preignition volatile yield as related to coal characteristics
[DE81-027584] N82-11250

POWDER METALLURGY
Trends in high temperature gas turbine materials
[NASA-TM-82715] N82-11182

POWDERED ALUMINUM
High-temperature enthalpy and X-ray powder diffraction data for aluminum suffide (Al2S)
[PB81-226250] N82-11174
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206

POWER AMPLIFIERS
Failure mechanism study of GaAs technology
[AD-A104440] N82-11963

POWER MODULES (STS)
Concept for a power system controller for large space electrical power systems
[NASA-TP-1939] N82-11109

POWER SPECTRA
Determination of the spectra of modulated pulse trains by the spectral function method
[RAE-LIB-TRANS-2058] N82-11335

PRECIPITATION (CHEMISTRY)
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029946] N82-11192

PRECIPITATION (METEOROLOGY)
Evaluation of photogrammetric flight under icing conditions on March 23, 1978
[NASA-TM-76617] N82-11725
Precipitation characteristics of summer storms at Straight Canyon barometer, Watershed, Utah
[PB81-223950] N82-11750

PREDICTION ANALYSIS TECHNIQUES
Prediction of turbulent boundary layer separation N82-11022
Development of prediction method for transonic shock induced separated flow
[AD-A104566] N82-11403
Preliminary development of a technique for estimating municipal-solid-waste generation
[DE81-024152] N82-11590
The quantitative recognition and evaluation of seismic quiescence: Applications to earthquake prediction and subduction zone tectonics N82-11682
H-O precessor computer code
[DE81-026669] N82-11814
Uncertainty analysis for geologic disposal of radioactive waste
[DE81-027206] N82-11893
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910

PREPREGS
The industrial processing of unidirectional fiber prepregs
[NASA-TM-76599] N82-11119

PRESSING (FORMING)
Microstructure of explosively compacted aluminum nitride ceramic
[UCRL-85274] N82-11220

PRESSURE DISTRIBUTION
The wave diagrams for diffraction and reflection of a traveling weak shock wave from an open end of a shock tube N82-11017
The comparison between the unsteady pressure fields calculated and measured on the ZKP model
[RAE-LIB-TRANS-2061] N82-11029
A comparison of theoretical and experimental pressure distributions for two advanced fighter wings
[NASA-TM-81331] N82-11054

PRESSURE EFFECTS
Monte Carlo calculations of the melting point of iron at core pressures N82-11881
High-pressure optical studies
[DE81-025577] N82-11918

PRESSURE MEASUREMENTS
Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027559] N82-11504

PRESSURE VESSEL DESIGN
Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025828] N82-11474

PRESSURE VESSELS
Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025828] N82-11474

PRESSURIZING
Relaxation of geothermal-reservoir stresses induced by heat production
[DE81-032024] N82-11715

PROBABILITY DENSITY FUNCTIONS
A note on a nonparametric maximum penalized likelihood estimator of the probability density function of a positive random variable. A MPLE with positive support
[AD-A104476] N82-11836
An upper bound on the probability density function in terms of Fisher information. A bound to the density function
[AD-A104474] N82-11837

PROBLEM SOLVING
Mechanical transformation of task heuristics into operational procedures
[AD-A104674] N82-11802
A second-order accurate procedure for solving the boundary layer equations based on the predictor-corrector form of the Crank-Nicolson Scheme
[NAL-TR-655] N82-11826

PROCEDURES
Proposed standard requirements and procedures for icing clearance N82-11061
Manual of analytical quality control for pesticides and related compounds in human and environmental samples
[PB81-222721] N82-11171

PROCESS HEAT
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029681] N82-11576
Residual-energy-applications program: EAST-facility requirements document
[DE81-027469] N82-11616

PRODUCT DEVELOPMENT
Study and development of an integrated head-up display
[AD-A104337] N82-11062
DOE solar-assisted heat-pump program: Its evolution and its potential
[DE81-026055] N82-11413
Integrated analysis of engine
[NASA-TM-82713] N82-11491
Solar cell development for the power extension package
[NASA-TM-82685] N82-11551
Second generation heliostat program, September 1979-March 1981
[DE81-029752] N82-11570

PRODUCTION ENGINEERING
Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365

PRODUCTIVITY
Applying science and technology to improve local government productivity
[PB81-217966] N82-11976

PROGRAM VERIFICATION (COMPUTERS)
COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-226425] N82-11798
Perkin-Elmer COBOL R06 Perkin-Elmer model 3240 OS/32 REV 05.02
[PB81-223685] N82-11799
Analysis of 4&5 data --- program evaluation
[AD-A104249] N82-11804
The effects of the symbology and spatial arrangement of software specifications in a debugging task
[AD-A104541] N82-11806

PROGRAMMING LANGUAGES
Philosophy of supercomputing
[DE81-028586] N82-11796
OBJ-1: A study in executable algebraic formal specification
[AD-A104468] N82-11803
GRAMPS: A graphics language interpreter for real time, interactive, three dimensional picture editing and animation
[DE81-027398] N82-11811

PROJECT PLANNING

Project demonstration of wind-turbine electricity: Interconnecting a northern Michigan fruit farm with a major utility
[DE81-030960] N82-11380

DOE solar-assisted heat-pump program: Its evolution and its potential
[DE81-029066] N82-11413

Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-029490] N82-11519

Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524

Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525

Military space doctrine: The great frontier
[AD-A104574] N82-11990

PROJECT SETI

The Telecommunications and Data Acquisition report
[NASA-CR-164939] N82-11279

A dedicated 26-m SETI sky survey instrument facility: A feasibility study N82-11281

PROJECTIVE GEOMETRY

Projection pursuit methods for data analysis
[DE81-027493] N82-11842

PROPELLANT GRAINS

Acta Mechanica Sinica
[AD-A105636] N82-12021

Analytical design for internal burning star grains of solid rockets N82-12025

PROPELLANTS

Development of inverse Raman spectroscopy for probing rapidly decomposing explosives and propellants
[AD-A104382] N82-11226

Correlation of shock-initiation tests for explosives and propellants
[DE81-026533] N82-11264

PROPULSION SYSTEM PERFORMANCE

JT8D high pressure compressor performance improvement
[NASA-CR-165531] N82-11467

Assessment of flywheel system benefits in selected vehicle applications
[DE81-025976] N82-11997

PROPULSIVE EFFICIENCY

Assessment of I.C. engines as drivers for heat actuated heat pumps
[DE81-024096] N82-11421

PROSTHETIC DEVICES

Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[NASA-TM-81746] N82-11211

PROTACTINIUM COMPOUNDS

Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

PROTECTION

Research to develop guidelines for cathodic protection of concentric neutral cables, volume 1 — underground transmission lines
[DE81-904195] N82-11382

Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-904210] N82-11383

PROTECTIVE COATINGS

Thermal control coatings based on trialkoxysilane hydrolysate binders — tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118

Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76606] N82-11120

Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[NASA-TM-81746] N82-11211

PROTEIN SYNTHESIS

Cyclic nucleotides in tissues during long-term hypokinesia
[NASA-TM-76726] N82-11757

Molecular events basic to cellular radiation response
[DE81-027696] N82-11776

PROTON BEAMS

Proton induction linacs as high-intensity neutron sources
[DE81-025825] N82-11878

PROTON IRRADIATION

Effect of energetic particle events on VLF/LF propagation parameters, 1974 - 1977
[AD-A104506] N82-11344

PROTON PRECESSION

H-O processor computer code
[DE81-026669] N82-11814

PROTOTYPES

Development and demonstration of an ammonia-water absorption heat pump
[DE81-024126] N82-11424

PROVING

COBOL Compiler: Mohawk data sciences MDS COBOL release 12 ANSI 74, series 21-models 40, 50, series 21 operating system 2
[PB81-226425] N82-11798

Perkin-Elmer COBOL R06 Perkin-Elmer model 3240 OS/32 REV 05.02
[PB81-223665] N82-11799

PROXIMITY EFFECT (ELECTRICITY)

Superconducting proximity effect for in situ and model layered systems
[DE81-025530] N82-11372

PSEUDOMONAS

Hydrogen production from the photosynthetic bacterium Rhodopseudomonas sphaeroides
[DE81-025831] N82-11256

PSYCHOLOGICAL FACTORS

The individual versus the computer: An examination of attitude problems and their impact on system development
[AD-A104636] N82-11977

PUBLIC HEALTH

Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780

PULMONARY CIRCULATION

New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

PULMONARY FUNCTIONS

Ozone exposure and pulmonary metabolic effects of mediators and hormones
[PB81-222406] N82-11779

PULSARS

X-ray and gamma-ray observations of pulsed emission from radio pulsars N82-12000

A model of the normal and null states of pulsars
[PB81-215907] N82-12011

PULSE AMPLITUDE

Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006

PULSE DURATION

China report: Science and technology, no. 125
[JPRS-78932] N82-11446

Analytical description of time characteristics of high power laser pulses N82-11448

Laser triggered spark gaps under experimental study N82-11451

PULSE GENERATORS

High-voltage air-core pulse transformers
[DE81-030999] N82-11370

Modular accelerator interconnecting and operating systems for PBFA-1
[DE81-025397] N82-11887

PULSE MODULATION

Determination of the spectra of modulated pulse trains by the spectral function method
[RAE-LIB-TRANS-2058] N82-11335

PULSED LASERS

Analytical description of time characteristics high power laser pulses N82-11449

Characteristics of pulse gold vapor lasor outlined N82-11450

Development of MBE grown Pb-salt semiconductor lasers for the 8.0 to 15.0 micrometer spectral region
[NASA-CR-165683] N82-11453

Pulsed DF laser effects study
[AD-A104575] N82-11457

Nova pulse power system description and status
[DE81-025600] N82-11898

PULSED RADIATION

DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124

Mechanistic analysis of loft pulsed neutron activation data — pipe flow velocity
[DE81-027124] N82-11876

Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006

PULSES

Pulsed-echo interface wave characterization of bolted plates N82-11126

PYRENES

Electron attachment as a probe of photoionization processes in liquid media — pyrene
[DE81-026352] N82-11163

PYROHELIOMETERS

Low-cost solar array project: Four absolute cavity radiometer (pyrheliometer) intercomparisons at New River, Arizona: Radiometer standards
[NASA-CR-164950] N82-11435

PYROLYSIS

Surface coal gasification
[DE81-030183] N82-11253

PYROTECHNICS

The effects of gaseous atmospheres on the performance characteristics of aluminum-sodium nitrate flares
[AD-A104383] N82-11227

Q

QUALITY CONTROL

Manual of analytical quality control for pesticides and related compounds in human and environmental samples
[PB81-222721] N82-11171

Chemorheology and quality control for an adhesive
[AD-A104556] N82-11215

The quality assurance role in the Deep Space Network N82-11302

Analysis of 4&5 data — program evaluation
[AD-A104249] N82-11804

QUANTITATIVE ANALYSIS

Intercomparison of techniques for the non-invasive measurement of bone mass
[DE81-029921] N82-11773

QUANTUM CHROMODYNAMICS

Elastic and inelastic psi production by muons
[DE81-025326] N82-11877

Detection and study of new heavy particles through jet identification
[DE81-025151] N82-11882

QUANTUM MECHANICS

Physics in few dimensions — condensed matter physics
[DE81-026054] N82-11853

R

RADAR ASTRONOMY

Planetary radar N82-11309

RADAR CROSS SECTIONS

Electromagnetic scattering by targets over a real Earth
[AD-A104492] N82-11347

RADAR DATA

SAR processing on the MPP
[NASA-CR-166726] N82-11801

RADAR ECHOES

Numerical simulation of the dynamics, cloud microphysics and radar echo structures of tropical and mid-latitude convection N82-11722

RADAR IMAGERY

Digital SAR processing using a fast polynomial transform N82-11295

RADAR MAPS

Radar mapping, archaeology, and ancient land use in the Maya lowlands
[NASA-CR-164931] N82-11514

RADAR TARGETS

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 1: Investigation of resonance extraction procedures — for target recognition
[AD-A104530] N82-11350

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 2: Appendices --- for target recognition
[AD-A104531] N82-11351

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 3: Translation of Prony's method --- for target recognition
[AD-A104532] N82-11352

RADAR TRACKING

Estimation of radar range biases at multiple sites
[AD-A104306] N82-11346

RADAR TRANSMISSION

Goldstone high power radiation control
N82-11308

RADIAL DISTRIBUTION

An ultrasonic transducer with Gaussian radial velocity distribution N82-11130

RADIAL VELOCITY

An ultrasonic transducer with Gaussian radial velocity distribution N82-11130

RADIANT HEATING

High thermal power density heat transfer --- thermionic converters
[NASA-CASE-LEW-12950-1] N82-11399

Magnetohydrodynamic research program of the MHD Energy center at Mississippi State University and structural features of MHD radiant boilers
[DE81-029901] N82-11934

RADIATION COUNTERS

Use of microprocessors in a neutrino experiment
[DE81-028057] N82-11875

RADIATION DAMAGE

Evaluation of the effects of solar radiation on glasses
[NASA-CR-161907] N82-11207

Experiments in high voltage electron microscopy --- radiation damage in ceramics and alloys
[DE81-025574] N82-11375

Solar cell development for the power extension package
[NASA-TM-82685] N82-11551

Evaluation and review of alternative waste forms for immobilization of high-level radioactive wastes
[DE81-026323] N82-11909

RADIATION DETECTORS

Scientific innovation and resonance ionization spectroscopy
[DE81-023193] N82-11157

Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: Including acousto-optic techniques
[DE81-029626] N82-11381

RADIATION DISTRIBUTION

Radiation balances and the solar constant
[NASA-TM-76612] N82-12016

RADIATION DOSAGE

DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

Improved calculations of energy deposition from fast neutrons
[DE81-025385] N82-11885

Preliminary activation calculations for the poloidal divertor experiment
[DE81-026525] N82-11942

RADIATION EFFECTS

Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116

Irradiation-induced swelling in commercial alloys
[DE81-029755] N82-11191

Molecular events basic to cellular radiation response
[DE81-027898] N82-11776

Stability of permanent-magnet parameters
[DE81-027013] N82-11852

RADIATION HARDENING

R&D services to develop an improved isolation technology radiation hardened bipolar integrated circuits (PEDIC)
[AD-A104657] N82-11367

RADIATION HAZARDS

Goldstone high power radiation control
N82-11308

DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

RADIATION MEASUREMENT

Radiation balances and the solar constant
[NASA-TM-76612] N82-12016

A review and interpretation of recent cosmic ray beryllium isotope measurements
[NASA-CR-164967] N82-12020

RADIATION SHIELDING

Calculation procedures for the analysis of integral experiments for fusion-reactor design
[DE81-027626] N82-11949

RADIATION TOLERANCE

Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165263] N82-11546

RADIATION TRANSPORT

Calculation procedures for the analysis of integral experiments for fusion-reactor design
[DE81-027626] N82-11949

RADIATIVE TRANSFER

A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166708] N82-11510

An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513

Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164969] N82-12004

Radiative transfer in cometary dust atmospheres: Critique of recent developments
[NASA-CR-164946] N82-12015

RADIO ALTIMETERS

The measurement of height and slope of isobaric surfaces with an airborne radar altimeter
[PB81-221632] N82-11739

RADIO ASTRONOMY

The Telecommunications and Data Acquisition report
[NASA-CR-164939] N82-11279

Radio astronomy N82-11280

Special activity utilization of GDSCC antennas during 1980 N82-11307

RADIO ATTENUATION

Plasmaspheric, faraday and total electron contents, 1977 and 1978
[AD-A104362] N82-11700

RADIO COMMUNICATION

DSN ground communication facility N82-11282

RADIO FREQUENCY HEATING

Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029615] N82-11933

RF-driven Tokamak reactor with sub-ignited, thermally stable operation
[DE81-029437] N82-11935

RADIO FREQUENCY INTERFERENCE

Strategies for weather-dependent data acquisition
N82-11286

RFI channels, 2 N82-11290

Cryogenic filters for RFI protection N82-11293

Closed form evaluation of symmetric two-sided complex integrals N82-11299

RADIO SOURCES (ASTRONOMY)

Radio astronomy N82-11280

RADIO TELESCOPES

A dedicated 26-m SETI sky survey instrument facility: A feasibility study N82-11281

RADIOACTIVE CONTAMINANTS

Environmental Monitoring Report, Sandia National Labs., Albuquerque, New Mexico, 180
[DE81-027839] N82-11649

Airborne radiological sampling of Mount St. Helens plumes
[PB81-213795] N82-11659

RADIOACTIVE DECAY

Decay heat curve evaluation test
[DE81-027181] N82-11976

RADIOACTIVE ISOTOPES

Environmental Monitoring Report, Sandia National Labs., Albuquerque, New Mexico, 180
[DE81-027839] N82-11649

RADIOACTIVE WASTES

Geochemical controls on trace metal transport in aqueous environmental systems N82-11631

Evaluation of uncertainties in geologic information
[DE81-025997] N82-11714

DARTAB: A program to combine airborne radionuclide environmental exposure data with dosimetric and health effects data to generate tabulations of predicted health impacts
[DE81-030434] N82-11774

Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161868] N82-11889

Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890

International safeguards for spent fuel storage
[DE81-029896] N82-11892

Uncertainty analysis for geologic disposal of radioactive waste
[DE81-027206] N82-11893

Materials considerations relative to multibarrier waste isolation
[DE81-029104] N82-11894

Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027067] N82-11895

Evaluation and review of alternative waste forms for immobilization of high-level radioactive wastes
[DE81-026323] N82-11909

RADIOACTIVITY

Preliminary activation calculations for the poloidal divertor experiment
[DE81-026525] N82-11942

RADIOGRAPHY

Standard specification for apparatus for gamma radiography
[SABS-1317-1980] N82-11433

RADIOMETERS

Low-cost solar array project: Four absolute cavity radiometer (pyrheliometer) intercomparisons at New River, Arizona: Radiometer standards
[NASA-CR-164950] N82-11435

RADIOMETRIC RESOLUTION

Antenna pattern modification for single reflector antennas --- smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11338

RADIOSONDES

US Monsoon Experiment MONEX rawinsonde/radiometersonde system
[PB81-222937] N82-11736

RAILGUN ACCELERATORS

Performance of a 100-kV, 78kJ electric-gun system
[DE81-025603] N82-11374

RAIN

An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513

A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530

Rainfall-runoff modeling and preliminary regional flood characteristics of small rural watersheds in the Arkansas river basin in Colorado
[PB81-224313] N82-11667

Some analysis on the diurnal variation of rainfall over the Atlantic Ocean
[NASA-CR-164937] N82-11724

An assessment of detecting mesoscale rainfall from mid-latitude cyclones using GOES imagery data
[AD-A104377] N82-11726

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738

Comparison of ocean and island rainfall in the tropical South Pacific, Atlantic, and Indian Oceans
[PB81-225401] N82-11745

RAMAN SPECTRA

Stimulated Raman scattering in large plasmas
[DE81-026569] N82-11938

Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

RAMAN SPECTROSCOPY
Development of inverse Raman spectroscopy for probing rapidly decomposing explosives and propellants
[AD-A104382] N82-11226
Stimulated Raman studies of CO2-laser-excited SF6
[DE81-025829] N82-11463
RAMJET ENGINES
An investigation of the combustion process in solid fuel ramjets
[AD-A104603] N82-11232
RANDOM ACCESS MEMORY
The Crossfie Random Access Memory (CRAM). Part 1: The concept and initial studies
[AD-A104543] N82-11788
RANDOM ERRORS
Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112
RANDOM NOISE
The R sub 0 parameter for the Gaussian channel N82-11291
Numerical differentiation of noisy data
[AD-A104631] N82-11831
RANDOM SAMPLING
Generalized L-, M- and R-statistics
[AD-A104480] N82-11835
RANDOM VARIABLES
A note on a nonparametric maximum penalized likelihood estimator of the probability density function of a positive random variable. AMPLE with positive support
[AD-A104476] N82-11836
RANDOM WALK
Bounded limit for the Monte Carlo point-flux-estimator
[DE81-026526] N82-11883
RANGEFINDING
Estimation of radar range biases at multiple sites
[AD-A104306] N82-11346
RANKINE CYCLE
Light-commercial Brayton/Rankine space-conditioning system
[DE81-024137] N82-11586
RANKING
A two-step approach to finite element ordering
[AD-A104320] N82-11827
RARE EARTH COMPOUNDS
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150
RARE EARTH ELEMENTS
High-pressure optical studies
[DE81-025577] N82-11918
RARE GAS-HALIDE LASERS
Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029900] N82-11458
RAWINSONDES
US Monsoon Experiment MONEX rawinsonde/radiometersonde system
[PB81-222937] N82-11736
RAY TRACING
Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920
RAYLEIGH WAVES
Waves guided by a thin viscoelastic layer between elastic solids N82-11129
RCA SATCOM SATELLITES
Mission operation report: RCA-D/Delta launch
[NASA-TM-84063] N82-11102
REACTION KINETICS
Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239
Solvent-Refined-Coal (SRC) process
[DE81-029628] N82-11268
Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-029071] N82-11641
On electron beam ionization of air and chemical reactions for disturbed air deionization
[AD-A104517] N82-11871
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11879
REACTION PRODUCTS
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11879
REACTOR CORES
KUGEL: A thermal, hydraulic, fuel performance and gaseous fission product release code for pebble bed reactor core analysis
[DE81-026561] N82-11904
REACTOR DESIGN
Advanced-gasification processes
[DE81-030184] N82-11254
Engineering approach for elastic-plastic fracture analysis
[DE81-904218] N82-11502
Engineering challenges of fusion-reactor development
[DE81-024129] N82-11907
Calculation procedures for the analysis of integral experiments for fusion-reactor design
[DE81-027626] N82-11949
Physics considerations for the FED limiter
[DE81-027596] N82-11950
REACTOR MATERIALS
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-904208] N82-11217
Trap activation model for hydrogen retention and isotope exchange in some refractory materials
[DE81-025995] N82-11221
Engineering approach for elastic-plastic fracture analysis
[DE81-904218] N82-11502
Coated-limiter testing in Tokamaks
[DE81-027665] N82-11951
REACTOR PHYSICS
Source-to-incident-flux relation in a Tokamak blanket module
[DE81-026524] N82-11941
REACTOR TECHNOLOGY
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025568] N82-11954
REAL TIME OPERATION
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787
Multiple-instruction, multiple-data path computers: Parallel processing impact on flight simulation software
[AD-A104506] N82-11789
GRAMPS: A graphics language interpreter for real time, interactive, three dimensional picture editing and animation
[DE81-027396] N82-11811
Engineering Analysis System (EASY)
[DE81-027508] N82-11846
Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991
Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992
RECEIVERS
An error budget for the JPL hydrogen maser receiver N82-11297
RECHARGING
Rechargeable molten-salt cells
[DE81-027091] N82-11595
RECIRCULATIVE FLUID FLOW
Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028
RECTANGLES
Surface-tension induced instabilities: Effects of lateral bounderies
[NASA-CR-165530] N82-11390
RECURSIVE FUNCTIONS
Recursive aspects of the theory of real closed fields N82-11849
RECYCLING
SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615
REDOX CELLS
Biologically assisted photoelectrochemical cell
[DE81-025905] N82-11607
REDUCTION (CHEMISTRY)
Oxygen reduction on carbon-supported platinum fuel-cell electrodes in H sub 3 Po sub 4
[DE81-027303] N82-11582
REDUNDANCY
Management of redundancy in flight control systems using optimal decision theory N82-11084
REENTRY EFFECTS
Analytical studies of high-pressure MHD accelerators --- applications to a reentry vehicle test facility
[AD-A104686] N82-11930
REFINING
Solvent-Refined-Coal (SRC) process
[DE81-029628] N82-11268
Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222604] N82-11655
REFLECTANCE
The opposition effect of particulate mineral surfaces and condensates: Applications to Saturn's rings N82-12014
REFLECTION
Photoelectric surface brightness observations and the geometry of reflection nebulae N82-12002
REFLEXES
Otolithic reflex and space perception function of cosmonauts N82-11764
REFRACTIVITY
Refracted-ray scanning (refracted near-field scanning) for measuring index profiles of optical fibers
[PB81-224610] N82-11920
REFRACTORIES
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-904208] N82-11217
REFRACTORY MATERIALS
Physical characterization of electronic materials
[AD-A104494] N82-11135
Materials technology for coal-conversion processes
[DE81-028474] N82-11169
Trends in high temperature gas turbine materials
[NASA-TM-82715] N82-11182
Castable high temperature tractory materials
[NASA-CASE-LEW-13060-2] N82-11210
REGIONAL PLANNING
National coal-market conditions for the year 2000: Regional-issue identification and analysis, high scenario
[DE81-026425] N82-11988
REGRESSION ANALYSIS
Projection pursuit methods for data analysis
[DE81-027493] N82-11842
REGULATIONS
Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 6: Innovation by regulation: The administration of control technology requirements under the Clean Air Act
[PB81-221616] N82-11664
Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 7: Periodic review and technological escalation of performance standards: New source performance standards review process
[PB81-218117] N82-11665
Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 8: Controlled trading and site-specific SIP revisions: Competing for attention in a crowded administrative route
[PB81-218273] N82-11666
Information of mission and functions of the National Bureau of Standards
[PB81-228207] N82-11761
REINFORCED SHELLS
Fabrication and wear test of a continuous fiber/particulate composite total surface hip replacement
[NASA-TM-81746] N82-11211
RELATIVISTIC ELECTRON BEAMS
Heating of a dense plasma with an intense relativistic electron beam: Initial observations
[DE81-025348] N82-11945
RELATIVISTIC PLASMAS
Theory of electron cyclotron heating in the Constance 2 experiment
[DE81-028269] N82-11906

Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931

RELATIVITY

Finite temperature relativistic magnetohydrodynamic winds N82-11923

RELIABILITY

Recent advances in statistical methods for system reliability using Bernoulli sampling of components
[AD-A104436] N82-11482

Feasible objective confidence bounds for system reliability
[AD-A104260] N82-11483

RELIABILITY ENGINEERING

Liquid oxygen turbopump technology
[NASA-CR-165487] N82-11468

REMOTE SENSING

Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635

Laser induced fluorescence from algae: Results of a ship-borne field test
[NASA-TM-76626] N82-11756

Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910

REMOTE SENSORS

Technology transfer of NASA microwave remote sensing system
[NASA-CR-165791] N82-11515

REMOTELY PILOTED VEHICLES

Parametric study. of microwave-powered high-altitude airplane platforms designed for linear flight
[NASA-TP-1918] N82-11050

REMOVAL

Removal of drift from frequency stability measurements N82-11298

REPORTS

Writing effective reports
[PB81-214645] N82-11983

REQUIREMENTS

Data base specifications for the OPAQUE program
[AD-A104340] N82-11709

RESEARCH FACILITIES

National Center for Atmospheric Research
[NCAR/AR-80] N82-11692

RESEARCH MANAGEMENT

Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274

Report on research at AFGL
[AD-A104513] N82-11704

Information of mission and functions of the National Bureau of Standards
[PB81-228207] N82-11761

Unique characteristics of financing science in the USSR
[PB81-212243] N82-11980

RESERVOIRS

Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533

RESIDENTIAL AREAS

Effects of aircraft noise on the equilibrium of airport residents: Testing and utilization of a new methodology
[NASA-TM-76628] N82-11636

RESIDENTIAL ENERGY

Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-028783] N82-11320

User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325

Well-water-source heat pump field performance study
[DE81-024136] N82-11419

Data collection and processing for the ACES — annual cycle energy system demonstration house
[DE81-030630] N82-11555

Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-028174] N82-11560

Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-028175] N82-11561

Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031921] N82-11568

International comparison of residential energy use: Indicators of residential energy use and efficiency. Part 1: The data base
[DE81-028550] N82-11592

SOLPLAN report: An assessment of barriers and incentives to conservation and alternative-energy use in the residential sector in Wisconsin
[DOE/CS-30292/3] N82-11614

RESISTANCE HEATING

Energy losses in conductors carrying very high currents
[DE81-025367] N82-11373

RESOLUTION

Study and development of an integrated head-up display
[AD-A104337] N82-11062

RESONANCE

Scientific innovation and resonance ionization spectroscopy
[DE81-023193] N82-11157

RESONANCE SCATTERING

Use of nuclear resonant scattering of Gamma rays for in vivo measurement of iron
[DE81-026051] N82-11775

RESONANT FREQUENCIES

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 1: Investigation of resonance extraction procedures — for target recognition
[AD-A104530] N82-11350

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 2: Appendices — for target recognition
[AD-A104531] N82-11351

Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 3: Translation of Prony's method — for target recognition
[AD-A104532] N82-11352

RESOURCES MANAGEMENT

Energy analysis of human ecosystems in an Appalachian coal county
[DE81-025177] N82-11574

The planning and management of California's coastal resources
[PB81-224057] N82-11670

Urban ecosystem and resource-conserving urbanism in Third World cities
[DE81-029854] N82-11995

RESPIRATION

Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11651

Airway gas mixing during rest and bicycle exercise N82-11766

RESPIRATORY IMPEDANCE

New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

RESPIRATORY PHYSIOLOGY

Airway gas mixing during rest and bicycle exercise N82-11766

RESPIRATORY SYSTEM

New approaches to quantitating the pulmonary effects on inhaled pollutants
[PB81-222382] N82-11778

REST

Airway gas mixing during rest and bicycle exercise N82-11766

RETENTION (PSYCHOLOGY)

Time and information model of human Memory Organization N82-11763

RETROFITTING

An evaluation of three-way control single and dual bed catalysts as applied to heavy-duty gasoline engines
[PB81-224982] N82-11477

EPA evaluation of the FUEL-MAX device under Section 511 of the Motor Vehicle Information and Cost Savings Act
[PB81-229666] N82-11479

EPA evaluation of the Automotive Cylinder Deactivator System (ACDS) under Section 511 of the Motor Vehicle Information and Cost Saving Act
[PB81-228256] N82-11480

REYNOLDS NUMBER

Computation of high Reynolds number internal/external flows
[NASA-TM-84049] N82-11046

REYNOLDS STRESS

Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164953] N82-11396

RHEOLOGY

Studies for the stabilization of coal-oil mixtures
[DOE/ET-10746/T1] N82-11156

Chemorheology and quality control for an adhesive
[AD-A104556] N82-11215

RHODE ISLAND

Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-028490] N82-11519

Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523

RIBBONS

Manufacturing methods and technology engineering for tape chip carrier
[AD-A104393] N82-11365

RIBONUCLEIC ACIDS

Molecular events basic to cellular radiation response
[DE81-027896] N82-11776

RICHARDSON NUMBER

Three-dimensional lee waves in a continuously stratified fluid N82-11387

RIEMANN MANIFOLD

Special functions and harmonic analysis on P sub n N82-11824

RIGID STRUCTURES

Magnetic bearings
[DE81-024201] N82-11473

RING LASERS

Theoretical analysis of effect of Langmuir flow in ring laser N82-11447

RIVER BASINS

Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528

Geology of the nahcolite deposits and associated oil shales of the Green River Formation in the Piceance Creek Basin, Colorado N82-11683

RIVERS

Bearing capacity and characterization of compressible Clayev and Silty Foundation soils in Oklahoma
[PB81-231607] N82-11330

Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521

Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533

Waste-assimilation capacity of the Arkansas River in Pueblo County, Colorado, as it relates to water-quality guidelines and stream classification
[PB81-227340] N82-11540

Better monitoring techniques are needed to assess the quality of rivers and streams, volume 1
[PB81-225286] N82-11675

Better monitoring techniques are needed to assess the quality of rivers and streams, volume 2
[PB81-225294] N82-11676

ROCKET EXHAUST

Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112

ROCKET LAUNCHING

Mission operation report: RCA-D/Delta launch
[NASA-TM-84063] N82-11102

ROCKET TEST FACILITIES

Analytical studies of high-pressure MHD accelerators — applications to a reentry vehicle test facility
[AD-A104686] N82-11930

ROCKS

Electrical conductivity structure of the San Andreas fault in central California N82-11686

ROLLER BEARINGS

Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471

ROOFS

Assessment of roofing research
[DE81-027077] N82-11322

ROTARY WINGS

Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056

Operational environment, meteorological conditions and weather forecasting N82-11057

Technology base for icing instrumentation and mathematical modelling N82-11058

Facilities for development and clearance
N82-11059

Ice protection system technology N82-11060

Proposed standard requirements and procedures for icing clearance N82-11061

Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11859

ROTATING BODIES

Shear flow instabilities in a rotating system
N82-11388

Magnetic bearings
[DE81-024201] N82-11473

ROTATING FLUIDS

A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025

Shear flow instabilities in a rotating system
N82-11388

Liquid-particle dynamics and rate of evaporation in the rotating field of centrifugal compressors
[DE81-024075] N82-11429

ROTATION

System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861

ROTOR AERODYNAMICS

Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045

RUNWAYS

Design of airport pavements for expansive soils
[AD-A104660] N82-11313

Probabilistic modeling of subgrade soil strengths
[AD-A104336] N82-11315

RURAL AREAS

Project demonstration of wind-turbine electricity: Interconnecting a northern Michigan fruit farm with a major utility
[DE81-030950] N82-11380

RUTHENIUM

Transportation fuels from synthetic gas
[DE81-029614] N82-11258

S

S WAVES

Finite element analysis of the split Hopkinson bar
[DE81-030387] N82-11503

SAFETY

International safeguards for spent fuel storage
[DE81-029696] N82-11892

SAFETY DEVICES

Standard specification for industrial safety-belt assemblies
[SABS-609-1980] N82-11278

SAFETY FACTORS

Preliminary activation calculations for the poloidal divertor experiment
[DE81-026525] N82-11942

SAFETY MANAGEMENT

Side impact sled and padding development
[PB81-217952] N82-11092

System safety program plan — electromagnetic pulse testing of the A-7E aircraft
[AD-A104557] N82-11354

SALYUT SPACE STATION

Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097

SAMOA

The wind climatology of American Samoa
[PB81-221012] N82-11733

SAMPLERS

An inexpensive, portable vibracoring system for shallow-water and land application
[AD-A104323] N82-11314

SAMPLING

Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149

Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-028783] N82-11320

Recent advances in statistical methods for system reliability using Bernoulli sampling of components
[AD-A104436] N82-11482

Feasible objective confidence bounds for system reliability
[AD-A104260] N82-11483

Conditional sampling of oceanic temperature and pressure
[AD-A104539] N82-11751

SAN ANDREAS FAULT

Electrical conductivity structure of the San Andreas fault in central California N82-11686

SANDS

Critical wave conditions for sand motion initiation
[AD-A104378] N82-11400

SAPPHIRE

Evaluation of the effects of solar radiation on glasses
[NASA-CR-161907] N82-11207

SATELLITE ATTITUDE CONTROL

On the shape and orientation control of an orbiting shallow spherical shell structure — shape and orientation control of large dish type receivers/reflectors
[NASA-CR-164970] N82-11100

SATELLITE OBSERVATION

The use of DMSP digital data for auroral measurements
[AD-A104392] N82-11707

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737

The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738

SATELLITE SOLAR ENERGY CONVERSION

Investigation of direct solar-to-microwave energy conversion techniques
[NASA-CR-161883] N82-11544

SATELLITE SURFACES

The morphology and evolution of Ganymede and Callisto N82-12013

SATELLITE-BORNE INSTRUMENTS

Magnetic Field Investigation for ISEE mother and daughter spacecraft — magnetometer design, capability, and results
[NASA-CR-166713] N82-11105

SATURATION (CHEMISTRY)

Analysis of saturated solar pond characteristics, volume 1
[DE81-030820] N82-11618

SATURN RINGS

The opposition effect of particulate mineral surfaces and condensates: Applications to Saturn's rings
N82-12014

SCALARS

Theoretical investigation of a passive scalar such as temperature in isotropic turbulence N82-11386

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164938] N82-11394

SCALE (RATIO)

Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183

SCALE MODELS

Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855

SCALING LAWS

Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855

Scalability of light ion beams to reach fusion conditions
[DE81-02444[illegible]] N82-11953

SCATTERING COEFFICIENTS

A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166706] N82-11510

SCATTERING CROSS SECTIONS

Elastic and inelastic psi production by muons
[DE81-025326] N82-11877

SCHEDULING

Goldstone high power radiation control
N82-11308

SCHLIEREN PHOTOGRAPHY

The wave diagrams for diffraction and reflection of a traveling weak shock wave from an open end of a shock tube N82-11017

SCHOTTKY DIODES

A study of metal-semiconductor contacts on indium phosphide
[AD-A104439] N82-11965

SCORING

Scriber for silicon wafers
[NASA-CASE-NPO-15539-1] N82-11469

SEA WATER

Effect of mechanical cleaning on seawater corrosion of candidate OTEC heat exchanger materials. Part 2: Tests with Amertap sponge rubber balls
[DE81-029953] N82-11190

Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511

SEALS (STOPPERS)

Preliminary study of temperature measurement techniques for Stirling engine reciprocating seals
[NASA-CR-165479] N82-11466

SEARCH PROFILES

Efficient methods for calculating the success function of fixed-space replacement policies
[DE81-029647] N82-11795

SEARCH RADAR

Threat Alert and Collision Avoidance System (TCAS) Symposium
[AD-A104563] N82-11047

SEDIMENT TRANSPORT

Critical wave conditions for sand motion initiation
[AD-A104378] N82-11400

SEDIMENTS

Beach foreshore sedimentation by organic and inorganic processes N82-11630

A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669

Use of a vegetative filter zone to control fine-grained sediments from surface mines
[PB81-226110] N82-11674

An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857

SEISMIC WAVES

Finite element analysis of the split Hopkinson bar
[DE81-030387] N82-11503

Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687

SEISMOGRAPHS

Recovery of seismic signals in noise by adaptive processing
[DE81-029469] N82-11713

SEISMOLOGY

The quantitative recognition and evaluation of seismic quiescence: Applications to earthquake prediction and subduction zone tectonics
N82-11682

COCORP traverses in Wyoming and Oklahoma
N82-11684

Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas — Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

SELF DIFFUSION (SOLID STATE)

Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973

SELF ERECTING DEVICES

Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11493

SEMICONDUCTOR DEVICES

Semiconductor measurement technology ARPA/NBS Workshop Moisture Measurement Technology for Hermetic Semiconductor Devices
[PB81-220733] N82-11384

Semiconductor measurement technology: The relationship between resistivity and dopant density for phosphorus and boron doped silicon
[PB81-221327] N82-11975
SEMICONDUCTOR JUNCTIONS
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
SEMICONDUCTORS (MATERIALS)
Physical characterization of electronic materials
[AD-A104494] N82-11135
Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11964
SENSITIVITY
Sensitivity theory for nonlinear systems. 2: Extensions to additional classes of responses
[DE81-030258] N82-11845
SENSITIZING
Vibrational sensitization of of 14N14NO, 15N14NO and H2O by laser excited SF6 N82-11143
SEPARATED FLOW
Development of prediction method for transonic shock induced separated flow
[AD-A104566] N82-11403
SEPARATORS
Static continuous electrophoresis device
[NASA-CASE-MFS-25306-1] N82-11147
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239
Development of battery separator composites
[NASA-CR-165508] N82-11547
SEQUENCING
Altered tissue reactivity and interactions between chemicals
[DE81-023169] N82-11777
SERIES (MATHEMATICS)
A general moment inequality for the maximum of rectangular partial sums of multiple series
[AD-A104475] N82-11828
SERIES EXPANSION
Estimation problems associated with the Weibull distribution
[DE81-030466] N82-11841
SEWAGE
Preliminary development of a technique for estimating municipal-solid-waste generation
[DE81-024152] N82-11590
SEWAGE TREATMENT
Sewage sludge additive
[NASA-CASE-NPO-13877-1] N82-11634
SHAFTS (MACHINE ELEMENTS)
Failure analysis of a tool steel torque shaft
[NASA-TM-82756] N82-11184
SHALE OIL
Jet fuel locks to shale oil: The 1980 technology review
[AD-A104414] N82-11226
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
Geology of the nahcolite deposits and associated oil shales of the Green River Formation in the Piceance Creek Basin, Colorado N82-11663
SHALES
Aluminum recovery from fly ash and shale-retort wastes
[DE81-027675] N82-11154
Exploration of coal and anthracitic carbonaceous shale resources, Narragansett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523
SHALLOW SHELLS
On the shape and orientation control of an orbiting shallow spherical shell structure — shape and orientation control of large dish type receivers/reflectors
[NASA-CR-164970] N82-11100
SHALLOW WATER
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857
SHAPE CONTROL
On the shape and orientation control of an orbiting shallow spherical shell structure — shape and orientation control of large dish type receivers/reflectors
[NASA-CR-164970] N82-11100
SHATTER CONES
A review of an attempt to create shatter cones with magnetic flyer plate technology
[NASA-CR-164614] N82-11492
SHEAR FLOW
Shear flow instabilities in a rotating system N82-11388
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164938] N82-11394
Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164953] N82-11396
SHEAR STRENGTH
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11205
Quasi-elastic high-pressure waves in 2024 Al and Cu
[DE81-025334] N82-11971
SHEAR STRESS
An improved transverse shear deformation theory for laminated antisotropic plates
[NASA-TP-1903] N82-11488
A review of an attempt to create shatter cones with magnetic flyer plate technology
[NASA-CR-164614] N82-11492
SHIVA LASER SYSTEM
High energy density capacitor testing for the AFWL SHIVA
[DE81-023688] N82-11379
SHOCK ABSORBERS
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212
SHOCK LOADS
Shock-induced organic chemistry
[DE81-024442] N82-11115
Shock effects in particle-beam fusion targets
[DE81-027806] N82-11952
SHOCK TESTS
Correlation of shock-initiation tests for explosives and propellants
[DE81-026533] N82-11264
SHOCK TUBES
Numerical computation and analysis of the flow field in a large shock tube with a variable cross-sectional area N82-12026
SHOCK WAVE GENERATORS
Performance of a 100-kV, 78kJ electric-gun system
[DE81-025603] N82-11374
SHOCK WAVE INTERACTION
Ionization fluctuations in collisional ionizing shock waves --- plasma interactions N82-11864
SHOCK WAVE PROFILES
Shock compression of beryllium
[DE81-024062] N82-11200
Upwind difference schemes for hyperbolic systems of conservation laws N82-11820
Quasi-elastic high-pressure waves in 2024 Al and Cu
[DE81-025334] N82-11971
SHOCK WAVE PROPAGATION
Acta mechanica sinica
[AD-A105184] N82-11014
The wave diagrams for diffraction and reflection of a traveling weak shock wave from an open end of a shock tube N82-11017
Constitutive modelling for the shock physicist
[DE81-024063] N82-11854
Acta Mechania Sinica
[AD-A105635] N82-12021
Numerical computation and analysis of the flow field in a large shock tube with a variable cross-sectional area N82-12026
SHOCK WAVES
Shock-induced organic chemistry
[DE81-024442] N82-11115
Development of prediction method for transonic shock induced separated flow
[AD-A104566] N82-11403
One-dimensional magnetohydrodynamic calculations of a hydrogen-gas puff
[UCRL-85867] N82-11940
SHORELINES
Beach foreshore sedimentation by organic and inorganic processes N82-11630
SIDELOBES
Antenna pattern modification for single reflector antennas — smoothing data from scanning microwave radiometers
[NASA-CR-166711] N82-11338
SIDES
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104562] N82-11402
SIGNAL ANALYZERS
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787
SIGNAL GENERATORS
Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11360
SIGNAL PROCESSING
Special activity utilization of GDSCC antennas during 1980 N82-11307
Modulation/demodulation techniques for satellite communications. Part 4: Appendices
[NASA-CR-164954] N82-11341
Fourier analysis of broadband, low-level signals using switched inputs
[AD-A104586] N82-11353
Binary/analog CCD correlator development
[AD-A104438] N82-11363
Architecture tuning of a real-time signal sorter in a dense environment
[AD-A104524] N82-11787
SIGNAL RECEPTION
Virtual center arraying N82-11287
SIGNAL TO NOISE RATIOS
Symbol error rate performance evaluation of the LM37 multimegabit telemetry modulator-demodulator unit N82-11289
Recovery of seismic signals in noise by adaptive processing
[DE81-029469] N82-11713
SIGNATURE ANALYSIS
Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112
Vibration signature analysis and acoustic-emission monitoring at Brayton Point
[DE81-904232] N82-11507
SILANES
Thermal control coatings based on trialkoxysilane hydrolysate binders --- tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
SILICA GLASS
Space processing of electronic materials — determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161892] N82-11094
A structural study of aluminosilicate glasses by Raman spectroscopy N82-11138
Evaluation of the effects of solar radiation on glasses
[NASA-CR-161907] N82-11207
SILICON
Scriber for silicon wafers
[NASA-CASE-NPO-15539-1] N82-11469
The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11548
Growth of silicon sheets from metallurgical-grade silicon
[DE81-025703] N82-11605
Negative-U for point defects in silicon
[AD-A104482] N82-11968
Semiconductor measurement technology: The relationship between resistivity and dopant density for phosphorus and boron doped silicon
[PB81-221327] N82-11975
SILICON ALLOYS
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027254] N82-11558
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
SILICON CARBIDES
Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76606] N82-11120

The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11205

SILICON DIOXIDE
Castable high temperature fractory materials
[NASA-CASE-LEW-13060-2] N82-11210
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974

SILICON OXIDES
Manganese glass-molybdenum metallized and copper brazed 99.5% alumina ceramics
[DE81-030423] N82-11218

SILICONES
Stress relaxation of cellular silicone material: 1981
[DE81-030692] N82-11137

SILVER COMPOUNDS
Advanced selenide thermoelectric development program
[DE81-027823] N82-11562

SILVER ZINC BATTERIES
Development of battery seperator composites
[NASA-CR-165506] N82-11547

SIMPLEX METHOD
Projected Newton methods and optimization of multicommodity flows
[AD-A104419] N82-11844

SIMULATION
Validation of a Monte Carlo simulation of binary time series
[AD-A104525] N82-11836

SIMULATORS
Solar heat pump simulator
[DE81-024368] N82-11583

SINGLE CRYSTALS
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161891] N82-11958

SITE SELECTION
Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240
Relocation of the Deep Space Network Maintenance Center N82-11305
Site selection for small wind energy conversion systems for US Department of Energy field evaluation program
[PB81-226662] N82-11624

SIZE DETERMINATION
Small conductive particle sensor — microfiber size determination
[NASA-CASE-LAR-12552-1] N82-11431

SKIN (ANATOMY)
Mechanical impedance of the human outer ear
[RAE-LIB-TRANS-2065] N82-11767

SKY BRIGHTNESS
Application of visible monochromatic auroral imaging data for modeling infrared Earth-limb morphology
[AD-A104343] N82-11706

SLABS
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500

SLAGS
Mass spectrometric studies of MHD slag thermochemistry
[PB81-221434] N82-11173

SLEDS
Side impact sled and padding development
[PB81-217952] N82-11092

SLICING
Scriber for silicon wafers
[NASA-CASE-NPO-15539-1] N82-11469

SLIDING FRICTION
Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471

SLUDGE
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029958] N82-11246
Sewage sludge additive
[NASA-CASE-NPO-13877-1] N82-11634

SLURRIES
Transport characteristics of alternate slurry fuels
[DE81-028580] N82-11255

SMELTING
Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652

SNOW
Performance assessments of precipitation gages for snow measurement
[PB81-218547] N82-11443
A model describing the microwave emission from a multi-layer snowpack at 37 GHz
[NASA-CR-166706] N82-11510

SOCIAL FACTORS
Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts — ethyl alcohol production
[DE81-029987] N82-11245
Energy analysis of human ecosystems in an Appalachian coal county
[DE81-025177] N82-11574

SODAR
Instrument intercomparisons at the Boulder Atmospheric Observatory during 1980
[PB81-220139] N82-11740

SODIUM CHLORIDES
Optical transparency of inexpensive salt solutions for construction of density-gradient ponds
[DE81-030832] N82-11559

SODIUM HYDROXIDES
Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239

SOIL MECHANICS
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Probabilistic modeling of subgrade soil strengths
[AD-A104336] N82-11315
Bearing capacity and characterization of compressible Clayev and Silty Foundation soils in Oklahoma
[PB81-231607] N82-11330
A review of the behaviour and engineering properties of carbonate soils
[PB81-226722] N82-11331

SOIL MOISTURE
Studies of heat transfer and water migration in soils
[DE81-023951] N82-11425
An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513

SOILS
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412
Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11418
Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11648
Geothermal environmental assessment: Behavior of selected geothermal brine contaminants in plants and soils
[PB81-222333] N82-11671
Geothermal environmental assessment baseline study: Vegetation and soils of the Roosevelt Hot Springs geothermal resource area
[PB81-223299] N82-11717

SOLAR ARRAYS
Voltage gradients in solar array cavities as possible breakdown sites in spacecraft-charging-induced discharges
[NASA-TM-82710] N82-11107
Solar cell development for the power extension package
[NASA-TM-82685] N82-11551
Mississippi County Community College solar photovoltaic project
[DE81-030869] N82-11554
Non-solar power tests at the Central Receiver Test Facility (CRTF)
[DE81-026955] N82-11604

SOLAR CELLS
Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165283] N82-11546
The effects of impurities on the performance of silicon solar cells
[NASA-CR-164945] N82-11548
Solar cell development for the power extension package
[NASA-TM-82685] N82-11551
Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027234] N82-11557
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027254] N82-11558
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025587] N82-11577
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
Thin-film polycrystaline silicon solar cells: Progress and problems
[DE81-025704] N82-11608
National photovoltaic program in amorphous materials
[DE81-025906] N82-11609
Analysis of indium-phosphide/indium tin oxide solar cells
[DE81-025907] N82-11610

SOLAR COLLECTORS
Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549
Secondary and compound concentrators for parabolic dish solar thermal power systems
[NASA-CR-164960] N82-11550
Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-028174] N82-11560
Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-028175] N82-11561
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029881] N82-11576
Low-cost solar flat-plate-collector development
[DE81-025061] N82-11584
Controls for solar heating and cooling
[DE81-025209] N82-11593
Test results and analysis of a convective loop solar air-collector
[DE81-028151] N82-11599
Performance testing of the TOLTEC TI-410 concentrating solar collector
[DE81-029994] N82-11617
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226613] N82-11625

SOLAR CONSTANT
Radiation balances and the solar constant
[NASA-TM-76612] N82-12016

SOLAR COOLING
Controls for solar heating and cooling
[DE81-025209] N82-11593
Analysis of solar desiccant systems and concepts
[DE81-023027] N82-11612

SOLAR CORONA
Search for optimal three-dimensional mapping of the solar corona from K-coronameter data
[PB81-222903] N82-12017

SOLAR ENERGY
Solar coal-gasification reactor for hydrocarbon-free synthesis gas
[DE81-028600] N82-11247
Parametric sensitivity study for solar-assisted heat-pump systems
[DE81-030309] N82-11407
Irrigation market for solar thermal parabolic dish systems
[NASA-CR-164955] N82-11549
Use of solar thermal energy to generate electricity
[DE81-028797] N82-11606
An assessment of selected solar energy industry activities
[PB81-222424] N82-11623
SOLAR ENERGY CONVERSION
User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325
DOE solar-assisted heat-pump program: Its evolution and its potential
[DE81-028055] N82-11413
Carlisle house: An all-solar electric residence
[DOE/ET-20279/133] N82-11622
SOLAR GENERATORS
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030962] N82-11566
SOLAR GRANULATION
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222895] N82-12018
SOLAR HEATING
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-028174] N82-11560
Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-028175] N82-11561
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030966] N82-11567
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029661] N82-11576
Hodges residence: Performance of a direct gain passive solar home in Iowa
[DE81-025528] N82-11581
Solar heat pump simulator
[DE81-024368] N82-11583
Controls for solar heating and cooling
[DE81-025209] N82-11593
Correlation methods
[DE81-025379] N82-11598
Long-term performance of the Hunn passive solar residence
[DE81-028735] N82-11600
Attached sunspace design analysis
[DE81-028736] N82-11601
Heat storage duration
[DE81-026635] N82-11602
SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615
Carlisle house: An all-solar electric residence
[DOE/ET-20279/133] N82-11622
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226813] N82-11625
SOLAR HOUSES
MASEC SOLAR 80 home designs
[DE81-028344] N82-11316
Hodges residence: Performance of a direct gain passive solar home in Iowa
[DE81-025528] N82-11581
Long-term performance of the Hunn passive solar residence
[DE81-028735] N82-11600
Heat storage duration
[DE81-026635] N82-11602
Carlisle house: An all-solar electric residence
[DOE/ET-20279/133] N82-11622
SOLAR PHYSICS
A self-consistent linear-mode analysis of a stellar convection zone N82-12008
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222895] N82-12018
SOLAR PONDS (HEAT STORAGE)
Optical transparency of inexpensive salt solutions for construction of density-grarfient ponds
[DE81-030632] N82-11559
Analysis of saturated solar pond characteristics, volume 1
[DE81-030620] N82-11618
SOLAR POSITION
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164930] N82-12010
SOLAR RADIATION
Mississippi County Community College solar photovoltaic project
[DE81-030669] N82-11554
A model of temperature stratification for correction of leveling refraction
[PB81-225435] N82-11744
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164930] N82-12010
Radiative transfer in cometary dust atmospheres: Critique of recent developments
[NASA-CR-164946] N82-12015
Radiation balances and the solar constant
[NASA-TM-76612] N82-12016
SOLAR REFLECTORS
Heliostat operation at the central receiver test facility (1978 - 1980)
[DE81-031026] N82-11556
Second generation heliostat. Volume 2: Definition of a heliostat manufacturing facility
[DE81-029624] N82-11565
Second generation heliostat program, September 1979-March 1981
[DE81-029752] N82-11570
SOLAR ROTATION
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222895] N82-12018
SOLAR TERRESTRIAL INTERACTIONS
Geomagnetic observations N82-11693
SOLAR THERMAL PROPULSION
Use of solar thermal energy to generate electricity
[DE81-028797] N82-11606
SOLENOIDS
Low temperature latching solenoid
[NASA-CASE-MSC-18106-1] N82-11357
SOLID CRYOGENS
Production and characterization of pure cryogenic inertial fusion targets
[DE81-025920] N82-11937
SOLID PROPELLANT COMBUSTION
An investigation of the combustion process in solid fuel ramjets
[AD-A104603] N82-11232
SOLID PROPELLANTS
An investigation of the combustion process in solid fuel ramjets
[AD-A104603] N82-11232
SOLID ROCKET PROPELLANTS
Analytical design for internal burning star grains of solid rockets N82-12025
SOLID SOLUTIONS
Growth of solid solution single crystals — mercury cadmium tellurides
[NASA-CR-161891] N82-11958
SOLID SUSPENSIONS
Studies for the stabilization of coal-oil mixtures
[DOE/ET-10746/T1] N82-11156
Stabilization characteristics of deposits of biologic solids generated in aerated lagoons
[PB81-224297] N82-11666
SOLID WASTES
Advanced system experimental facility: Solid waste to methane gas. Background and process description
[DE81-030198] N82-11244
Preliminary development of a technique for estimating municipal-solid-waste generation
[DE81-024152] N82-11590
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663
SOLIDIFICATION
Application of solidification theory to rapid solidification processing — alloys and metallic glasses
[AD-A104561] N82-11214
Innovative technology for fabrication of ceramics: EDS rapid solidification process application to specialized materials
[PB81-214868] N82-11222
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890
SOLIDS
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494
SOLUBILITY
Adsorption of mixed liquids and solids from water solution onto activated carbon N82-11141
Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027562] N82-11236
SOLUTES
Temperature and solute-transport simulation in streamflow using a Lagrangian reference frame
[PB81-225757] N82-11543
An electrostatic model for energies of molecules in solution N82-11869
SOLVENT EXTRACTION
Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027087] N82-11895
SOLVENT REFINED COAL
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166
Solvent-Refined Coal-1 Demonstration Project. Final environmental impact statement, Volume 1 of 2 — coal liquefaction plant at Newman, Kentucky
[DE81-025983] N82-11252
Solvent-Refined-Coal (SRC) process
[DE81-029626] N82-11268
SOLVENTS
Investigation of mechanisms of hydrogen transfer in coal hydrogenation
[DE81-030492] N82-11165
SOL-CYCLE: A solar-assisted solvent-recycling process for asphalt-impregnation of fiber board
[DE81-903377] N82-11615
SONDES
Instrument intercomparisons at the Boulder Atmospheric Observatory during 1980
[PB81-220139] N82-11740
SOOT
Soot formation in synfuels
[DE81-030273] N82-11164
Effects of components of synfuels on soot formation
[DE81-027961] N82-11242
SORBENTS
The use of lanthanide chelates as selective complexing sorbents for gas chromatography
N82-11139
SOUND INTENSITY
Handbook for industrial noise control
[NASA-SP-5108] N82-11858
SOUND PROPAGATION
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857
SOUNDS (TOPOGRAPHIC FEATURES)
Index to observations of currents in Puget Sound, Washington, from 1908-1980
[PB81-224115] N82-11753
SOURCES
New Hampshire and Vermont point source inventory update for NECRMP
[PB81-219339] N82-11672
SOUTH AFRICA
Standard specification for air-brake reserviors
[SABS-1312-1980] N82-11464
SOUTHERN CALIFORNIA
Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687

SOYUZ SPACECRAFT
Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097

SPACE COMMUNICATION
The Telecommunications and Data Acquisition report
[NASA-CR-164939] N82-11279
The deep space optical channel. 2: Wave propagation effects N82-11288
RFI channels, 2 N82-11290
The R sub 0 parameter for the Gaussian channel N82-11291
Design of throat section of conical corrugated horns N82-11292
Cryogenic filters for RFI protection N82-11293
Traveling-wave maser, closed cycle refrigerator automation N82-11294
Digital SAR processing using a fast polynomial transform N82-11295
Minimizing the time to troubleshoot a failed system N82-11296

SPACE COOLING (BUILDINGS)
Assessment of building diagnostics
[DE81-027078] N82-11321
Alternative heat pump cycle studies
[DE81-024983] N82-11417
Brayton/Rankine 10-ton gas-fired space conditioning system, phase 2
[PB81-223372] N82-11478

SPACE ENVIRONMENT SIMULATION
Evaluation of the effects of solar radiation on glasses
[NASA-CR-161907] N82-11207

SPACE ERECTABLE STRUCTURES
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093
Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11493

SPACE EXPLORATION
A proposed new policy for planetary protection
[NASA-CR-164947] N82-11095

SPACE FLIGHT STRESS
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Otolithic reflex and space perception function of cosmonauts N82-11764

SPACE HEATING (BUILDINGS)
Energy analysis sample building data
[DE81-027188] N82-11318
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
Assessment of building diagnostics
[DE81-027078] N82-11321
Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412
Investigation of direct expansion in ground source heat pumps
[DE81-024139] N82-11418
Well-water-source heat pump field performance study
[DE81-024138] N82-11419
Development and demonstration of an ammonia-water absorption heat pump
[DE81-024128] N82-11424
Brayton/Rankine 10-ton gas-fired space conditioning system, phase 2
[PB81-223372] N82-11478

SPACE LAW
Agreement governing the activities of states on the Moon and other celestial bodies
[NASA-TM-76730] N82-11989

SPACE MAINTENANCE
Minimizing the time to troubleshoot a failed system N82-11296

SPACE PROCESSING
Space processing of electronic materials — determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161892] N82-11094

SPACE PROCESSING APPLICATIONS ROCKET
SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816

SPACE SHUTTLE BOOSTERS
Space shuttle solid rocket booster sting interference wind tunnel test analysis
[NASA-CR-161865] N82-11040

SPACE SHUTTLE MAIN ENGINE
Space shuttle main engine controller
[NASA-TP-1932] N82-11784

SPACE SHUTTLE ORBITERS
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051
Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434

SPACE SHUTTLES
Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635

SPACE STORAGE
Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161888] N82-11889

SPACE WEAPONS
Where are we in the space war?
[NASA-TM-76804] N82-11096

SPACECRAFT
The effects of lateral aerodynamic uncertainties on the handling qualities of the space shuttle orbiter at Mach numbers of 1.5 and .6
[NASA-TM-83193] N82-11051

SPACECRAFT CHARGING
Testing of a spacecraft model in a combined environment simulator
[NASA-TM-82723] N82-11106
Voltage gradients in solar array cavities as possible breakdown sites in spacecraft-charging-induced discharges
[NASA-TM-82710] N82-11107
The angular impact distribution of charged particles attracted to a charged cylindrical spacecraft
[AD-A104519] N82-11108
Particle trajectories in a model electric field 1 — neutralizing spacecraft surfaces
[AD-A104507] N82-11870

SPACECRAFT COMMUNICATION
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101
Strategies for weather-dependent data acquisition N82-11286
Virtual center arraying N82-11287
Telecommunications in cometary environments
[NASA-CR-164956] N82-11340
Modulation/demodulation techniques for satellite communications. Part 4: Appendices
[NASA-CR-164954] N82-11341

SPACECRAFT CONSTRUCTION MATERIALS
Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116

SPACECRAFT DESIGN
Control design of flexible spacecraft N82-11081

SPACECRAFT MODELS
Testing of a spacecraft model in a combined environment simulator
[NASA-TM-82723] N82-11106

SPACECRAFT PERFORMANCE
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101

SPACECRAFT POWER SUPPLIES
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101
Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165263] N82-11546

SPACECRAFT STRUCTURES
Technology for large space systems: A special bibliography
[NASA-SP-7046(05)] N82-11093

SPACECRAFT TELEVISION
ATS-5 12 year in orbit evaluation
[NASA-CR-166728] N82-11101

SPACECRAFT TRACKING
The Telecommunications and Data Acquisition report
[NASA-CR-164939] N82-11279
Networks consolidation program N82-11283
Pioneers 6 through 12 mission support N82-11285

SPANWISE BLOWING
A study on numerical method for evaluating spanwise integral in subsonic lifting-surface theory
[NAL-TR-661T] N82-11035

SPARK CHAMBERS
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11968

SPARK GAPS
Laser triggered spark gaps under experimental study N82-11451
Modular accelerator interconnecting and operating systems for PBFA-1
[DE81-025397] N82-11867

SPATIAL RESOLUTION
An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513

SPECIFIC HEAT
The volumes and heat capacities of nonelectrolytes and organic electrolytes in methanol at 25 C N82-11142
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170

SPECIFICATIONS
Standard specification for light ladders
[SABS-1304-1980] N82-11277
OBJ-1: A study in executable algebraic formal specification
[AD-A104488] N82-11803
The effects of the symbology and spatial arrangement of software specifications in a debugging task
[AD-A104541] N82-11806

SPECTRAL BANDS
Development of MBE grown Pb-salt semiconductor lasers for the 8.0 to 15.0 micrometer spectral region
[NASA-CR-165683] N82-11453

SPECTRAL EMISSION
Far-infrared measurements of trace gases
[NASA-CR-164965] N82-11698

SPECTRAL REFLECTANCE
Identification of lithologic units using multichannel imaging systems N82-11509

SPECTRAL RESOLUTION
Stimulated Raman studies of CO2-laser-excited SF6
[DE81-025829] N82-11463

SPECTRAL SIGNATURES
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910

SPECTROSCOPIC ANALYSIS
Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-025961] N82-11167

SPECTROSCOPY
Scientific innovation and resonance ionization spectroscopy
[DE81-023193] N82-11157
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229

SPECTRUM ANALYSIS
Fourier analysis of broadband, low-level signals using switched inputs
[AD-A104588] N82-11353
Least squares autoregressive (maximum entropy) spectral estimation for Fourier spectroscopy and its application to the electron cyclotron emission from plasma
[IPPJ-530] N82-11925
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11968

SPEECH BASEBAND COMPRESSION
Research on narrowband communications
[AD-A104296] N82-11345

SPENT FUELS
International safeguards for spent fuel storage
[DE81-029696] N82-11692

SPHERICAL COORDINATES
On transonic flow in hyperbolic Laval nozzles — the conformal curvilinear coordinate method
N82-11020

SPHERICAL SHELLS
On the shape and orientation control of an orbiting shallow spherical shell structure — shape and orientation control of large dish type receivers/reflectors
[NASA-CR-164970] N82-11100
Compressible convection in a rotating spherical shell — latitudinal differential rotation on the Sun
[PB81-222895] N82-12018

SPHYGMOGRAPHY
Logic-controlled occlusive cuff system
[NASA-CASE-MSC-14836-1] N82-11770

SPIN-SPIN COUPLING
H-O processor computer code
[DE81-026889] N82-11814

SPREAD F
ALTAIR radar study of equatorial spread F
[AD-A104554] N82-11710

SPUTTERING
Cadmium sulfide/copper sulfide heterojunction cell research by sputter deposition
[DE81-026219] N82-11553

SQUALLS
Doppler radar data analysis during fiscal year 1980
[PB81-225476] N82-11742

STABILITY
Stability of permanent-magnet parameters
[DE81-027013] N82-11852

STABILIZERS (FLUID DYNAMICS)
Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028

STACKS
Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222820] N82-11653
FGDIS primer: Major equipment/component classifications, problem/solution access codes, and definitions related to FGD systems as contained in the Flue Gas Desulfurization Information System (FGDIS)
[PB81-225948] N82-11865

STAINLESS STEELS
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11188
Hydrogen damage in stainless steel
[DP-MS-81-31] N82-11197
Trapping and surface permeation of deuterium in Fe Ni and stainless steel: An ion-beam study
[DE81-023303] N82-11201

STANDARDIZATION
Low-cost solar array project: Four absolute cavity radiometer (pyrheliometer) intercomparisons at New River, Arizona: Radiometer standards
[NASA-CR-164950] N82-11435

STANDARDS
Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056
Proposed standard requirements and procedures for icing clearance N82-11061
Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319
Portable transfer standards for pressure and gas flow measurements
[DE81-024445] N82-11409
Calibration of a laminar flowmeter
[DE81-024423] N82-11442
Intergrated assessment for energy-related environmental standards: A summary of issues and findings
[DE81-026552] N82-11646
Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 7: Periodic review and technological escalation of performance standards: New source performance standards review process
[PB81-218117] N82-11665
Technical activities of the Office of Environmental Measurements - 1980
[PB81-227660] N82-11677

STANDING WAVES
System for controlled acoustic rotataion of objects
[NASA-CASE-NPO-15522-1] N82-11861

STARTERS
Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11360

STATISTICAL ANALYSIS
The quantitative determination of non-metallic inclusions by a mathematical statistical method
[RAE-LIB-TRANS-2066] N82-11179
Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-026783] N82-11320
Theoretical investigation of a passive scalar such as temperature in isotropic turbulence N82-11386
Recent advances in statistical methods for system reliability using Bernoulli sampling of components
[AD-A104436] N82-11482
Feasible objective confidence bounds for system reliability
[AD-A104260] N82-11483
Estimating the statistical properties of crack growth for small cracks
[AD-A104672] N82-11496
Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687
Applications of non-parametric statistics and analysis of variance on sample variances
[NASA-CR-165789] N82-11834

STATISTICAL DECISION THEORY
A simulation analysis of the effectiveness of Markovian control and Bayesian control — cost analysis
[AD-A104635] N82-11840

STATISTICAL DISTRIBUTIONS
Applications of non-parametric statistics and analysis of variance on sample variances
[NASA-CR-165789] N82-11834
Generalized L-, M- and R-statistics
[AD-A104460] N82-11835

STATISTICAL MECHANICS
Maximal entropy in fluid and plasma turbulence: A review
[DE81-025366] N82-11946

STATISTICAL TESTS
Validation of a Monte Carlo simulation of binary time series
[AD-A104525] N82-11836

STATISTICAL WEATHER FORECASTING
Estimates for the probabilities of surface-to-air cloud-free lines-of-sight and low cloud statistics from ship observations. Part 1: Fifteen marine locations
[AD-A104633] N82-11730

STDN (NETWORK)
A dedicated 26-m SETI sky survey instrument facility: A feasibility study N82-11261
Networks consolidation program N82-11263

STEADY FLOW
Mean values and an inverse problem for porous media flow
[DE81-027210] N82-11411

STEAM TURBINES
Preliminary evaluation of advanced coal-based electricity-generating technologies by means of system-integration analysis
[DE81-029989] N82-11573

STEELS
Failure analysis of a tool steel torque shaft
[NASA-TM-82758] N82-11184
Microstructure and properties of dual-phase steels containing fine precipitates
[DE81-029946] N82-11192
Adsorption of hydrogen on iron and the hydrogen embrittlement of steel
[DE81-025164] N82-11196

STEFAN-BOLTZMANN LAW
Stefan problem with a convective boundary condition
[DE81-030424] N82-11410

STELLAR ATMOSPHERES
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12005

STELLAR LUMINOSITY
Photoelectric surface brightness observations and the geometry of reflection nebulae N82-12002

STELLAR MASS ACCRETION
Theoretical and observational aspects of stellar variability N82-12007

STELLAR MASS EJECTION
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12005
Theoretical and observational aspects of stellar variability N82-12007

STELLAR MODELS
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12005
A self-consistent linear-mode analysis of a stellar convection zone N82-12008

STELLAR OSCILLATIONS
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12005

STELLAR RADIATION
Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003
Linear and nonlinear theory study of Alpha Virginis
[DE81-025335] N82-12006

STELLAR SPECTRA
M-alpha emission from a disk in the close binary U Cephei: A Monte Carlo simulation N82-12001
Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003

STELLAR TEMPERATURE
Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164969] N82-12004

STELLAR WINDS
Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164969] N82-12004

STEREOCHEMISTRY
Role of excited states of molecular ions in structure studies with high-energy collisions
[DE81-023696] N82-11881

STIFFNESS MATRIX
An influence coefficient method for the application of the modal technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070

STIRLING CYCLE
Stirling cycle cryogenic cooler --- magnetically suspended pistons
[NASA-CASE-GSC-12697-1] N82-11312
Diaphragm Stirling engine heat-actuated heat pump development
[DE81-024076] N82-11423
Preliminary study of temperature measurement techniques for Stirling engine reciprocating seals
[NASA-CR-165479] N82-11466
Jet impingement heat transfer enhancement for the GPU-3 Stirling engine
[NASA-TM-82727] N82-11993

STOCHASTIC PROCESSES
Theory of stochastic optimal control some basic notions N82-11075
An introduction to stochasic optimal control theory
N82-11076
Stochastic models for dependent load processes
[PB81-219735] N82-11327
On permanents and diagonal products of doubly stochastic matrices N82-11832

STORAGE BATTERIES
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11578

STORAGE RINGS (PARTICLE ACCELERATORS)
Modular accelerator interconnecting and operating systems for PBFA-1
[DE81-025397] N82-11887
Storage ring injection
[DE81-023646] N82-11901

STORAGE STABILITY
Technical and economic aspects of hydrogen storage in metal hydrides
[NASA-TM-76610] N82-11223
The storage of hydrogen in the form of metal hydrides: An application to thermal engines
[NASA-TM-76609] N82-11225
Method for retarding dye fading during archival storage of developed color photographic film — inert atmosphere
[NASA-CASE-MFS-23250-1] N82-11432

STORAGE TANKS
Controls for solar heating and cooling
[DE81-025209] N82-11593
STORMS
An evaluation of the spatial resolution of soil moisture information
[NASA-CR-166724] N82-11513
STORMS (METEOROLOGY)
A numerical dynamical investigation of the role of subsynoptic inertial an isallobaric adjustments in organizing severe local storm ensembles
N82-11719
Relationships between synoptic storm activity and sea surface temperature anomalies over the North Pacific Ocean
[AD-A104590] N82-11727
Doppler radar data analysis during fiscal year 1980
[PB81-225476] N82-11742
Precipitation characteristics of summer storms at Straight Canyon barometer, Watershed, Utah
[PB81-223950] N82-11750
STRAIN GAGES
Transient temperature response of strain gages
[DE81-031922] N82-11440
STRAIN RATE
DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124
STRAPS
Standard specification for industrial safety-belt assemblies
[SABS-809-1980] N82-11276
STRATIFICATION
A model of temperature stratification for correction of levelling refraction
[PB81-225436] N82-11744
STRATIGRAPHY
Geologic considerations in underground coal mining system design
[NASA-CR-164961] N82-11516
Beach foreshore sedimentation by organic and inorganic processes N82-11630
STRATOSPHERE
Report of Lawrence Livermore National Laboratory to the Federal Aviation Agency on the high-altitude pollution program, 1980
[DE81-028264] N82-11647
Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11666
Meridional heat transport at the onset of winter stratospheric warming
[NASA-TM-76614] N82-11697
The 4-day temperature wave in the winter polar stratosphere N82-11720
STREAMS
Better monitoring techniques are needed to assess the quality of rivers and streams, volume 1
[PB81-225286] N82-11675
Better monitoring techniques are needed to assess the quality of rivers and streams, volume 2
[PB81-225294] N82-11676
STRESS ANALYSIS
New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11067
STRESS CORROSION
Hydrogen damage in stainless steel
[DP-MS-81-31] N82-11197
Fracture mechanics of cellular glass
[NASA-CR-164959] N82-11209
STRESS CORROSION CRACKING
Flaw growth of 7075, 7475, 7050 and 7049 aluminum alloy plate in stress corrosion environments: 4-year marine atmosphere results
[NASA-CR-161887] N82-11181
Electrochemical conditions within stress corrosion cracks (experimental techniques)
[AD-A104246] N82-11497
STRESS CYCLES
Fatigue initiation at a high or low number of cycles
[RAE-LIB-TRANS-2056] N82-11487
STRESS FUNCTIONS
Formulae for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222846] N82-11508
STRESS INTENSITY FACTORS
Strength behaviour of fatigue cracked lugs — stress intensity and crack propagation characteristics
[RAE-LIB-TRANS-2057] N82-11486
STRESS MEASUREMENT
Finite element analysis of the split Hopkinson bar
[DE81-030387] N82-11503
Dynamic measurement of Poisson's ratio in granular materials at 0.2 to 0.8 GPa
[DE81-027589] N82-11504
STRESS PROPAGATION
Formulae for the homogeneous isotropic perfectly linear elastic continuum
[PB81-222846] N82-11508
STRESS RELAXATION
Stress relaxation of cellular silicone material: 1981
[DE81-030692] N82-11137
Contribution to the characterization of the anelastic properties of multi-phase systems
[DE81-025581] N82-11198
Relaxation of geothermal-reservoir stresses induced by heat production
[DE81-032024] N82-11715
STRETCHING
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11205
STRIP TRANSMISSION LINES
Study of microstrip antenna elements, arrays, feeds, losses, and applications
[AD-A104493] N82-11343
STRUCTURAL ANALYSIS
Parameter estimation of large flexible aerospace structures with application to the control of the Maypole Deployable Reflector
[NASA-CR-164971] N82-11099
Integrated analysis of engine
[NASA-TM-82713] N82-11491
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500
SPAR data set contents — finite element structural analysis system
[NASA-TM-83181] N82-11816
Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851
STRUCTURAL BASINS
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-028651] N82-11518
Planning a comprehensive program for exploration of the anthracite deposits of the Narragansett Basin of Massachusetts and Rhode Island, phase 1 and 2
[DE81-026490] N82-11519
Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522
Water resources of upper separation creek basin, south-central Wyoming
[PB81-224263] N82-11531
STRUCTURAL DESIGN
Control design of flexible spacecraft N82-11081
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Jointless bridges
[PB81-227738] N82-11332
Magnetohydrodynamic research program of the MHD Energy center at Mississippi State University and structural features of MHD radiant boilers
[DE81-029901] N82-11934
STRUCTURAL DESIGN CRITERIA
Considerations for the design, implementation, and effective operation of Sandia's super-power generators
[DE81-025404] N82-11906
STRUCTURAL ENGINEERING
MASEC SOLAR 80 home designs
[DE81-028344] N82-11316
Jointless bridges
[PB81-227738] N82-11332
Research in nonlinear structural and solid mechanics
[NASA-CP-2147-SUPPL] N82-11489
STRUCTURAL INFLUENCE COEFFICIENTS
An influence coefficient method for the application of the model technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070
STRUCTURAL RELIABILITY
Standard specification for fight ladders
[SABS-1304-1980] N82-11277
STRUCTURAL STABILITY
An influence coefficient method for the application of the model technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070
STRUCTURAL VIBRATION
New estimation method for flutter or divergence boundary from random responses at subcritical speeds
[NAL-TR-667T] N82-11034
On-line failure detection of vibrating structures
[UCRL-86099] N82-11505
Finite element analysis of coupled magneto-mechanical problems of conducting plates
[AD-A104406] N82-11851
STRUCTURAL WEIGHT
Firefighting module development
[NASA-TM-82444] N82-11311
SUBREFLECTORS
Surface resistivity measurements of candidate subreflector surfaces N82-11300
SUBROUTINES
Tennessee Valley Authority atmospheric fluidized-bed combustor simulation
[DE81-030262] N82-11151
Automatic multi-banking of memory for microprocessors
[NASA-CASE-NPO-15295-1] N82-11785
SUBSIDENCE
Computer models to support investigations of surface subsidence and associated ground motion induced by underground coal gasification
[DE81-027131] N82-11712
SUBSONIC FLOW
Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071
Acta Mechania Sinica
[AD-A105635] N82-12021
On the kernel function collocation method in steady subsonic flow for wing with control surfaces
N82-12023
SUBSONIC WIND TUNNELS
Subsonic cascade wind tunnel tests using a compressor configuration of DCA blades
[AD-A104597] N82-11059
SUBSTRATES
Probabilistic modeling of subgrade soil strengths
[AD-A104336] N82-[illegible]15
SUCTION
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction
[NASA-TP-1902] N82-11391
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766
SULFITES
Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222604] N82-11655
SULFUR
Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957
SULFUR COMPOUNDS
Modified-sulfur cements for use in concretes, flexible pavings, coatings, and grouts
[PB81-226870] N82-11333
SULFUR DIOXIDES
Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140

Calculations from compliance emissions of long and short term SO2 concentrations in the southwest Pennsylvania air quality control region
[PB81-226078] N82-11678

SULFUR FLUORIDES
Vibrational sensitization of of 14N14NO, 15N14NO and H2O by laser excited SF6 N82-11143

SULFUR OXIDES
Effects of acid precipitation on cation transport in New Hampshire forest soils
[DE81-027494] N82-11646
Control techniques for sulfur oxide emissions from stationary sources, second edition
[PB81-220048] N82-11662

SULFURIC ACID
A compilation of thermodynamic and transport properties of aqueous sulfuric acid
[PB81-229171] N82-11172
Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652

SUMS
A general moment inequality for the maximum of rectangular partial sums of multiple series
[AD-A104475] N82-11826

SUPERCONDUCTIVITY
Large gain, negative resistance, and oscillations in superconducting quasiparticle heterodyne mixers
[AD-A104534] N82-11361

SUPERCONDUCTORS
Test results of ac superconducting cables
[BNL-29291] N82-11371
Superconducting proximity effect for in situ and model layered systems
[DE81-025530] N82-11372

SUPERCRITICAL WINGS
The comparison between the unsteady pressure fields calculated and measured on the ZKP model
[RAE-LIB-TRANS-2061] N82-11029
A comparison of theoretical and experimental pressure distributions for two advanced fighter wings
[NASA-TM-81331] N82-11054

SUPERGIANT STARS
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025338] N82-12006

SUPERSATURATION
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025483] N82-11193

SUPERSONIC FLOW
Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023
A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026
Molecular spectroscopy and relaxation in supersonic beams N82-11867

SUPERSONIC INLETS
A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025

SUPERSONIC SPEEDS
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016

SUPPLYING
Electric power supply and demand for the contiguous United States, 1981 - 1990
[DE81-027126] N82-11376

SUPPORT INTERFERENCE
Space shuttle solid rocket booster sting interference wind tunnel test analysis
[NASA-CR-161865] N82-11040

SURFACE ACOUSTIC WAVE DEVICES
Optical fiber interferometer for the study of ultrasonic waves in composite materials, discussion
N82-11122
Characterization of metal-polymer boundaries using Stoneley and Leaky waves N82-11128
Optical detection of pulsed surface particle displacements N82-11131
Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133
A comparison of weighting techniques for SAW transducers at UHF
[AD-A104510] N82-11362
Low temperature quartz crystal oscillator fast warm-up saw oscillator
[AD-A104403] N82-11366
Evaluation of alpha aluminum phosphate for advanced acoustic wave devices
[AD-A104665] N82-11962

SURFACE DISTORTION
Polishing-to-figuring transition in turned optics
[DE81-028691] N82-11917

SURFACE ENERGY
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11163
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025567] N82-11577

SURFACE FINISHING
The effect of surface treatment of carbon fibres on the strength properties of carbon-reinforced plastics
[RAE-LIB-TRANS-2052] N82-11205
Tooling for electrochemical deburring
[DE81-030190] N82-11475

SURFACE LAYERS
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967

SURFACE PROPERTIES
Surface analysis by Fourier transform infrared (Ftir) spectroscopy
[DE81-025741] N82-11150
Surface resistivity measurements of candidate subreflector surfaces N82-11300
Design of airport pavements for expansive soils
[AD-A104660] N82-11313
Surface-enhanced nonlinear optical effects and detection of adsorbed molecular monolayers
[DE81-027097] N82-11967
A theoretical and experimental investigation of the photometric functions of particulate surfaces
N82-12012

SURFACE REACTIONS
Studies of the kinetics and mechanism of gas-surface reactions on metal and metal oxide surfaces N82-11140
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11163
Epitaxial morphologies and deposition energetics of polyoxymethylene N82-11204
Laser excitation of surface electronic states for a one-dimensional semiconductor
[AD-A104522] N82-11964

SURFACE ROUGHNESS
Quiet bearing surface characterization
[AD-A104412] N82-11472

SURFACE TEMPERATURE
A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026
Preliminary study of temperature measurement techniques for Stirling engine reciprocating seals
[NASA-CR-165479] N82-11466
Relationships between synoptic storm activity and sea surface temperature anomalies over the North Pacific Ocean
[AD-A104590] N82-11727
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910

SURFACE WATER
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270
Water resources data for Kentucky, water year 1980
[PB81-223612] N82-11526
Water resources data for Michigan, water year 1980
[PB81-224160] N82-11527
Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528

SURFACE WAVES
Critical wave conditions for sand motion initiation
[AD-A104376] N82-11400

SURFACES
A study on numerical method for evaluating spanwise integral in subsonic lifting-surface theory
[NAL-TR-661T] N82-11035

SUSQUEHANNA RIVER BASIN (MD-NY-PA)
Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533

SWEEP ANGLE
The comparison between the unsteady pressure fields calculated and measured on the ZKP model
[RAE-LIB-TRANS-2061] N82-11029

SWELLING
Irradiation-induced swelling in commercial alloys
[DE81-029755] N82-11191

SWEPT WINGS
Amplified crossflow disturbances in the laminar boundary layer on swept wings with suction
[NASA-TP-1902] N82-11391

SYMMETRY
Symmetries of the nonlinear conductivity for a relativistic turbulent plasma
[AD-A104544] N82-11931
Classical field theory with Z(3) symmetry
[DE81-027089] N82-11969

SYNCHRONOUS MOTORS
Application of a rare-earth cobalt magnet to synchronous motors
[NAL-TR-656] N82-11358

SYNCHRONOUS SATELLITES
Mission operation report: RCA-D/Delta launch
[NASA-TM-84063] N82-11102
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 1
[PB81-222762] N82-11737
The estimation of convective, summertime rainfall in the United States high plains from thermal infrared, geostationary satellite imagery, volume 2
[PB81-222770] N82-11738

SYNCHROTRON RADIATION
Workshop on Atomic Physics at the National Synchrotron Light Source
[DE81-023507] N82-11874

SYNOPTIC METEOROLOGY
Tropical storm movement based on synoptic map typing using empirical orthogonal functions
[AD-A104591] N82-11728

SYNTHESIS (CHEMISTRY)
Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11166
Lasers in materials processing
[DE81-027657] N82-11460

SYNTHETIC APERTURE RADAR
Digital SAR processing using a fast polynomial transform N82-11295
SAR processing on the MPP
[NASA-CR-166726] N82-11801

SYNTHETIC FUELS
Soot formation in synfuels
[DE81-030273] N82-11164
Outgassing of two synthetic fuels
[AD-A104580] N82-11231
Alternative fuel for the steel industry of Northern Indiana: A prefeasibility study of a central coal gasification project
[DE81-029314] N82-11233
Effects of components of synfuels on soot formation
[DE81-027961] N82-11242
Advanced-gasification processes
[DE81-030184] N82-11254
Fusion as a source of synthetic fuels
[BNL-29281] N82-11257
Transportation fuels from synthetic gas
[DE81-029614] N82-11258
Synthetic fuel development for the Upper Missouri River Basin. Section 13: Water assessment report
[PB81-224537] N82-11276

SYSTEM EFFECTIVENESS
Design, operation and performance of a ground coupled heat pump system in a cold climate
[DE81-024257] N82-11412

SYSTEMS
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
SYSTEMS ANALYSIS
Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030706] N82-11405
Measuring/computing complex for automation of ergonomic experiments N82-11765
SYSTEMS ENGINEERING
Design considerations for optimal flight control systems N82-11077
Design techniques for multivariable flight control systems N82-11078
Application of nonlinear systems inverses to automatic flight control design: System concepts and flight evaluations N82-11083
Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11236
Minimizing the time to troubleshoot a failed system N82-11296
DOE solar-assisted heat-pump program: Its evolution and its potential
[DE81-026056] N82-11413
Conduct a state-of-the-art survey of existing knowledge for the design of ground-source heat pumps
[DE81-024064] N82-11420
Performance predictions and measurements for space-power-system heat pipes
[LA-UR-81-808] N82-11426
Geologic considerations in underground coal mining system design
[NASA-CR-164981] N82-11516
Environmental protection as an ongoing component of large facilities engineering projects N82-11633
Space shuttle main engine controller
[NASA-TP-1932] N82-11784
Comparisons of some large scientific computers
[NASA-TM-81928] N82-11817
Modular accelerator interconnecting and operating systems for PBFA-1
[DE81-025397] N82-11867
Improvements to a high-frequency fiber-optic system for plasma diagnostics
[DE81-026741] N82-11919
Plasma assessments for the Fusion Engineering Device (FED)
[DE81-024264] N82-11948
SYSTEMS SIMULATION
Solvent-Refined-Coal (SRC) process
[DE81-029628] N82-11268
Energy analysis sample building data
[DE81-027168] N82-11318
Solar heat pump simulator
[DE81-024308] N82-11583
H-O processor computer code
[DE81-026669] N82-11814
SYSTOLE
On the active part played by the heart in the venous return of the blood
[RAE-LIB-TRANS-2017] N82-11766

T

T-38 AIRCRAFT
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860
TABLES (DATA)
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170
Calibration of a laminar flowmeter: The data and correlations
[DE81-025227] N82-11441
TANKS (CONTAINERS)
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4703-26] N82-11501
TANTALUM
Analysis of standard reference materials by absolute INAA
[DE81-025825] N82-11900
TARGET RECOGNITION
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 1: Investigation of resonance extraction procedures -- for target recognition
[AD-A104530] N82-11350
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 2: Appendices -- for target recognition
[AD-A104531] N82-11351
Investigation of procedures for automatic resonance extraction from noisy transient electromagnetics data. Volume 3: Translation of Prony's method -- for target recognition
[AD-A104532] N82-11352
TECHNICAL WRITING
Writing effective reports
[PB81-214645] N82-11983
TECHNOLOGICAL FORECASTING
Packet Speech Systems Technology
[AD-A104373] N82-11348
Incentives for technological innovation in air pollution reduction: An ETIP policy research series. Volume 7: Periodic review and technological escalation of performance standards: New source performance standards review process
[PB81-218117] N82-11665
Forecast of emerging technologies
[PB81-227290] N82-11998
TECHNOLOGIES
Surface coal gasification
[DE81-030183] N82-11253
Forecast of emerging technologies
[PB81-227290] N82-11998
TECHNOLOGY ASSESSMENT
Assessment of advanced coal gasification processes
[NASA-CR-164949] N82-11146
Jet fuel looks to shale oil: The 1980 technology review
[AD-A104414] N82-11228
Low/medium-Btu coal-gasification assessment program for specific sites of two New York utilities
[DE81-025518] N82-11240
Assessment of oil-shale technology in Brazil
[DE81-027574] N82-11249
Atmospheric fluidized-bed projects technology overview
[DE81-027143] N82-11251
Advanced-gasification processes
[DE81-030184] N82-11254
Alcohol fuels in the United States
[DE81-026013] N82-11265
Gas recovery from coal deposits
[PB81-222291] N82-11271
Mechanical Energy Storage Technology (MEST) development
[DE81-026800] N82-11596
An assessment of selected solar energy industry activities
[PB81-222424] N82-11623
Philosophy of supercomputing
[DE81-026586] N82-11796
Acoustic scaling: A review of progress to date, and of possible future development
[BBC-RD-1981/6] N82-11855
Nova pulse power system description and status
[DE81-025800] N82-11898
TECHNOLOGY TRANSFER
Scientific innovation and resonance ionization spectroscopy
[DE81-023193] N82-11157
Technology transfer of NASA microwave remote sensing system
[NASA-CR-165791] N82-11515
Overview of the applied battery and electrochemical research program
[DE81-027397] N82-11594
TECHNOLOGY UTILIZATION
Handbook for industrial noise control
[NASA-SP-5108] N82-11858
TECTONICS
The quantitative recognition and evaluation of seismic quiescence: Applications to earthquake prediction and subduction zone tectonics N82-11682
Studies of continental and oceanic crust from seismic, geodetic and magnetic observations N82-11685
TEFLON (TRADEMARK)
Effects of ionizing radiation on the chemical structure, crystalline content and molecular weight distribution of various Teflon resins N82-11203
TELECOMMUNICATION
RFI channels, 2 N82-11290
The R sub 0 parameter for the Gaussian channel N82-11291
Design of throat section of conical corrugated horns N82-11292
Cryogenic filters for RFI protection N82-11293
Traveling-wave maser, closed cycle refrigerator automation N82-11294
Telecommunications in cometary environments
[NASA-CR-164956] N82-11340
TELEMETRY
Outsider's look at flight instrumentation
[DE81-025409] N82-11066
Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] N82-11103
Symbol error rate performance evaluation of the LM37 multimegabit telemetry modulator-demodulator unit N82-11289
TELEVISION TRANSMISSION
The use of remote active deflectors for feeding UHF relay stations
[BBC-RD-1981/5] N82-11334
TEMPERATURE
Theoretical investigation of a passive scalar such as temperature in isotropic turbulence N82-11386
Finite temperature relativistic magnetohydrodynamic winds N82-11923
TEMPERATURE DEPENDENCE
Transient temperature response of strain gages
[DE81-031922] N82-11440
Heating of a dense plasma with an intense relativistic electron beam: Initial observations
[DE81-025348] N82-11945
TEMPERATURE DISTRIBUTION
The 4-day temperature wave in the winter polar stratosphere N82-11720
TEMPERATURE EFFECTS
Hydride chemical compressor, phase 1
[DE81-030199] N82-11155
Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471
Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960
TEMPERATURE GRADIENTS
A model of temperature stratification for correction of leveling refraction
[PB81-225435] N82-11744
TEMPERATURE MEASUREMENT
Adaptation of a turbine test facility to high-temperature research
[RAE-LIB-TRANS-2064] N82-11069
Thermal expansion of metal matrix composites --- acousto-optic study of microcracks and temperature measurement
[AD-A104680] N82-11134
Preliminary study of temperature measurement techniques for Stirling engine reciprocating seals
[NASA-CR-165479] N82-11466
Temperature measurement in turbulent arcs N82-11921
TEMPORAL RESOLUTION
Stimulated Raman studies of CO2-laser-excited SF6
[DE81-025829] N82-11463
TENNESSEE
Water resources data for Tennessee, water year 1979
[PB81-226249] N82-11539
TENSILE PROPERTIES
Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116
TENSILE TESTS
Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116
TENSORS
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164838] N82-11394

TERMINOLOGY
Content representation for retrieval
[PB81-170672] N82-11984

TERNARY ALLOYS
Study of certain features of the electronic structure of the ternary alloys Ni2(Mn, Fe) and Ni3(Mn, Co)
[NASA-TM-76620] N82-11180

TERRAIN
The morphology and evolution of Ganymede and Callisto N82-12013

TERRAIN FOLLOWING AIRCRAFT
Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104388] N82-11517

TERRESTRIAL PLANETS
Workshop on Early Crustal Genesis: Implications from Earth
[NASA-CR-164944] N82-11691

TERRESTRIAL RADIATION
Time-variable Earth's albedo model characteristics and applications to satellite sampling errors
[NASA-CR-165781] N82-11723
Thermal algorithms analysis --- programming tasks supporting the development of a thermal model of the Earth's surface
[NASA-CR-166716] N82-11800
Radiation balances and the solar constant
[NASA-TM-76612] N82-12016

TEST FACILITIES
Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056
Facilities for development and clearance
N82-11059
Adaptation of a turbine test facility to high-temperature research
[RAE-LIB-TRANS-2064] N82-11069
System safety program plan --- electromagnetic pulse testing of the A-7E aircraft
[AD-A104557] N82-11354
Lewis Research Center's coal-fired, pressurized, fluidized-bed reactor test facility
[NASA-TM-81616] N82-11397
USSR report. Life sciences biomedical and behavioral sciences, no. 12
[JPRS-79338] N82-11762
Measuring/computing complex for automation of ergonomic experiments N82-11765
Magnetohydrodynamic research program of the MHD Energy center at Mississippi State University and structural features of MHD radiant boilers
[DE81-029901] N82-11934

TEST FIRING
AC firing ability of detonation
[PB81-216053] N82-11272

TEXAS
Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas --- Texas and Northern Chihuahua, Mexico
[NASA-CR-164964] N82-11695

THEORETICAL PHYSICS
Theoretical and experimental studies of the electro-optic effect: Toward a microscopic understanding
[AD-A104363] N82-11961

THERMAL BATTERIES
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572

THERMAL CONDUCTIVITY
Space processing of electronic materials --- determining ther themal conductivity of mercury cadmium tellurides and furnace design
[NASA-CR-161892] N82-11394
Certain physical properties of cobalt and nickel borides
[NASA-TM-76623] N82-11185
Advanced selenide thermoelectric development program
[DE81-027823] N82-11562
Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932

THERMAL EMISSION
Decay heat curve evaluation test
[DE81-027181] N82-11976

THERMAL ENERGY
Site And Neighborhood Design (SAND): Development of simplified automated building thermal load procedures, phase 1
[DE81-027136] N82-11317
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572
Analysis of thermal/mechanical energy-conversion concepts
[DE81-027854] N82-11585
Use of solar thermal energy to generate electricity
[DE81-026797] N82-11606

THERMAL EXPANSION
Thermal expansion of metal matrix composites --- acousto-optic study of microcracks and temperature measurement
[AD-A104680] N82-11134

THERMAL INSULATION
Assessment of roofing research
[DE81-027077] N82-11322
Three prototype designs for an exterior-mounted, interior-operated, movable insulation system
[DE81-025586] N82-11324
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4703-26] N82-11501

THERMAL POLLUTION
Meteorological Effects of Thermal Energy Releases (METER) program
[DE81-030431] N82-11640
OTEC environmental biological oceanographic program
[DE81-027402] N82-11645

THERMAL PROTECTION
Thermal control coatings based on trialkoxysilane hydrolysate binders --- tolerance to ultraviolet radiation in vacuum
[NASA-CASE-MFS-25620-1] N82-11118

THERMAL STABILITY
Aluminum ion-containing polyimide adhesives
[NASA-CASE-LAR-12640-1] N82-11206

THERMAL STRESSES
Relaxation of geothermal-reservoir stresses induced by heat production
[DE81-032024] N82-11715

THERMALIZATION (ENERGY ABSORPTION)
Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030705] N82-11405
Chemical heat pump program: An overview
[DE81-025086] N82-11414

THERMIONIC CONVERTERS
High thermal power density heat transfer --- thermionic converters
[NASA-CASE-LEW-12950-1] N82-11399

THERMISTORS
Directional flow sensor
[NASA-CASE-FRC-11074-1] N82-11436

THERMOCHEMICAL PROPERTIES
Thermal and electrochemical biomass conversion at SERI
[DE81-030507] N82-11563

THERMOCHEMISTRY
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170
Mass spectrometric studies of MHD slag thermochemistry
[PB81-221434] N82-11173
Chemical heat pump program: An overview
[DE81-025086] N82-11414

THERMODYNAMIC CYCLES
Alternative heat pump cycle studies
[DE81-024963] N82-11417

THERMODYNAMIC EFFICIENCY
Heat pump R and D at Oak Ridge National Laboratory
[DE81-024121] N82-11422
Evaluation of the micro-carburetor
[NASA-CR-164958] N82-11994

THERMODYNAMIC PROPERTIES
Silicon carbide as an oxidation-resistant high-temperature material. 1: Oxidation and heat corrosion behavior
[NASA-TM-76606] N82-11120
A compilation of thermodynamic and transport properties of aqueous sulfuric acid
[PB81-229171] N82-11172

THERMODYNAMICS
Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023
Application of solidification theory to rapid solidification processing --- alloys and metallic glasses
[AD-A104561] N82-11214

THERMOELECTRIC GENERATORS
Controls for solar heating and cooling
[DE81-025209] N82-11593

THERMOELECTRIC POWER GENERATION
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572

THERMOELECTRICITY
Review of thermally regenerative electrochemical systems, volume 2
[DE81-029624] N82-11572

THERMOMECHANICAL TREATMENT
Fatigue characteristics and microstructural analysis of thermomechanically-processed, high-magnesium aluminum-magnesium alloy
[AD-A104589] N82-11189

THERMONUCLEAR REACTIONS
Uncertainties associated with inertial-fusion ignition
[DE81-025408] N82-11944

THERMOPLASTIC RESINS
Microstructure of amorphous and semi-crystalline polymers
[AD-A102853] N82-11216

THERMOSPHERE
Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104384] N82-11703

THIN FILMS
Determination of exact orientation relationships between martensite and austenite in steels by microdiffraction
[LBL-12289] N82-11195
Amorphous boron-silicon-hydrogen alloys for thin-film heterojunction solar cells
[DE81-027254] N82-11558
Impurity effects in a-Si:H solar cells
[DE81-025069] N82-11575
Low-cost solar flat-plate-collector development
[DE81-025081] N82-11584
Thin-film polycrystaline silicon solar cells: Progress and problems
[DE81-025704] N82-11608
Analysis of indium-phosphide/indium tin oxide solar cells
[DE81-025907] N82-11610

THIN PLATES
Eddy current flows around cracks in thin plates for nondestructive testing
[AD-A104407] N82-11481

THORIUM COMPOUNDS
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82 11170

THREE DIMENSIONAL FLOW
Acta mechanica sinica
[AD-A105184] N82-11014
The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015
A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025
A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite elemunt algorithm
[AD-A104514] N82-11055
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

THROATS
Design of throat section of conical corrugated horns N82-11202

THROMBIN
Participation of the hypophyseal-adrenal cortex system in thrombin clearance during immobilization stress
[NASA-TM-76729] N82-11760

THRUST VECTOR CONTROL
Optimal control in the lunar module digital autopilot
N82-11085

THUNDERSTORMS
A comparison of two methods for forecasting thunderstorms at Luke Air Force Base, Arizona
[PB81-225880] N82-11746

TIDEPOWER
Ocean energy-waves, currents, and tides
[DE81-025708] N82-11611

TIDES
On the computation of barotropic tides in deep estuaries with application to Knight Inlet, British Columbia
[PB81-220147] N82-11754
Time dependent mixing in a salt wedge estuary
N82-11755

TILES
Dynamic Moire methods for detection of loosened space shuttle tiles
[NASA-TM-83205] N82-11434

TIME
SEL and EPNL noise duration coefficients for the 747 and T-38 aircraft
[NASA-TM-83214] N82-11860

TIME DEPENDENCE
Vibrational sensitization of of 14N14NO, 15N14NO and H2O by laser excited SF6 N82-11143
Time dependent mixing in a salt wedge estuary
N82-11755

TIME MEASUREMENT
Analytical description of time characteristics of high power laser pulses N82-11448

TIME SERIES ANALYSIS
Validation of a Monte Carlo simulation of binary time series
[AD-A104525] N82-11838
Properties of batch means from stationary ARMA (1, 1) time series
[AD-A104245] N82-11839

TIN COMPOUNDS
Coal hydrogenation via bonding of metallic compounds to coal, part 1. Solubilization of Illinois bituminous coal - the critical importance of methylene group cleavage, part 2
[DE81-027562] N82-11238

TIN OXIDES
Analysis of indium-phosphide/indium tin oxide solar cells
[DE81-025807] N82-11610

TISSUES (BIOLOGY)
Altered tissue reactivity and interactions between chemicals
[DE81-023189] N82-11777

TITANIUM ALLOYS
Materials considerations relative to multibarrier waste isolation
[DE81-029104] N82-11894

TITANIUM CARBIDES
Coated-limiter testing in Tokamaks
[DE81-027665] N82-11951

TOKAMAK DEVICES
Magneto-optically modulated CH3OH laser for Faraday rotation measurements in Tokamaks
[DE81-027298] N82-11482
Guide to the data-acquisition software of the Doublet III computer system
[DE81-029816] N82-11813
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929
Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932
Antenna-plasma coupling theory for ICRF heating of large Tokamaks
[DE81-029815] N82-11933
RF-driven Tokamak reactor with sub-ignited, thermally stable operation
[DE81-029437] N82-11935
Source-to-incident-flux relation in a Tokamak blanket module
[DE81-028524] N82-11941
Preliminary activation calculations for the poloidal divertor experiment
[DE81-028525] N82-11942
Plasma assessments for the Fusion Engineering Device (FED)
[DE81-024254] N82-11948
Coated-limiter testing in Tokamaks
[DE81-027665] N82-11951

TOPOGRAPHY
Geologic considerations in underground coal mining system design
[NASA-CR-164961] N82-11516
Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104368] N82-11517

TOPOLOGY
Homeomorphisms of some direct limit spaces
N82-11848

TOROIDAL PLASMAS
The effects of toroidal geometry and scattering by density fluctuations on the accessibility and energy deposition of lower hybrid waves N82-11922
Theory of drift instabilities and the associated anomalous transport
[IPPJ-REV-1] N82-11924
An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926
Boosting up of neutral beam heating power by slowly rising toroidal field — compression
[IPPJ-534] N82-11929
Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932

TORSIONAL STRESS
Failure analysis of a tool steel torque shaft
[NASA-TM-82756] N82-11164

TOXIC HAZARDS
Outgassing of two synthetic fuels
[AD-A104580] N82-11231
Low-Btu-gasifier emissions toxicology
[DE81-031000] N82-11651
Assessment of hazard potential from combustion of wastes in industrial boilers
[PB81-221869] N82-11656
Carbon/graphite fibers: Environmental exposures and potential health implications
[PB81-229692] N82-11780

TRACE ELEMENTS
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025678] N82-11194
Proof of concept study
[AD-A104338] N82-11639
Trace-element and phase relations in fly ash
[DE81-028555] N82-11643
Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11689

TRACKING STATIONS
NOCA upgrade N82-11304
Special activity utilization of GDSCC antennas during 1980 N82-11307
An optimization model for energy generation and distribution in a dynamic facility N82-11310

TRAILING EDGES
Aircraft wing trailing-edge noise
[NASA-CR-164952] N82-11039
Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11859

TRAINING EVALUATION
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091

TRAJECTORIES
Algorithm for fuel conservative horizontal capture trajectories
[NASA-TM-81334] N82-11018

TRAJECTORY CONTROL
Flight trajectory control investigation
[AD-A104542] N82-11048
Optimum climb and descent trajectories for airline missions N82-11082

TRANSDUCERS
Engineering Analysis System (EASY)
[DE81-027506] N82-11846

TRANSFORMATIONS (MATHEMATICS)
The Bogoliubov transformation and its application to cosmological particle production N82-12009

TRANSFORMERS
High-voltage air-core pulse transformers
[DE81-030999] N82-11370

TRANSIENT RESPONSE
Transient temperature response of strain gages
[DE81-031922] N82-11440

TRANSISTOR AMPLIFIERS
Low noise tuned amplifier
[NASA-CASE-GSC-12587-1] N82-11359

TRANSITION FLOW
Investigation of heat transfer in straight and curved rectangular ducts for laminar and transition flows
[AD-A104804] N82-11401

TRANSITION METALS
Trace-element and phase relations in fly ash
[DE81-028555] N82-11643

TRANSMISSION LINES
Conductor fatigue-life research
[DE81-904209] N82-11369
Test results of ac superconducting cables
[BNL-29291] N82-11371

TRANSMISSION LOSS
Study of microstrip antenna elements, arrays, feeds, losses, and applications
[AD-A104493] N82-11343
An experimental investigation of ocean sediment effects upon long range transmission loss in shallow water N82-11857

TRANSONIC COMPRESSORS
Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023
A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025

TRANSONIC FLOW
Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019
On transonic flow in hyperbolic Laval nozzles — the conformal curvilinear coordinate method
N82-11020
Calculations of transonic potential flow over cascades
[NASA-CR-165471] N82-11041
A comparison of theoretical and experimental pressure distributions for two advanced fighter wings
[NASA-TM-81331] N82-11054

TRANSONIC SPEED
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016

TRANSPONDERS
Threat Alert and Collision Avoidance System (TCAS) Symposium
[AD-A104563] N82-11047

TRANSPORT AIRCRAFT
Control law design for transport aircraft flight tasks
N82-11080

TRANSPORT PROPERTIES
A compilation of thermodynamic and transport properties of aqueous sulfuric acid
[PB81-229171] N82-11172
Transport characteristics of alternate slurry fuels
[DE81-028580] N82-11255
Theory of drift instabilities and the associated anomalous transport
[IPPJ-REV-1] N82-11924

TRAPPED PARTICLES
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974

TRAPPING
Trapping and release of implanted D/H ions in fused silica
[DE81-024441] N82-11974

TRAVELING IONOSPHERIC DISTURBANCES
Effect of energetic particle events on VLF/LF propagation parameters, 1974 - 1977
[AD-A104506] N82-11344

TRIBOLOGY
Universal binding energy relations in metallic adhesion
[NASA-TM-82706] N82-11183

TRIMETHYL COMPOUNDS
The stability of new transparent polymeric materials: The epoxy trimethoxyboroxine system. Part 1: The preparation, characterization and curing of epoxy resins and their copolymers
[NASA-CR-164951] N82-11208

TRITIUM
Hydrogen storage-bed design for tritium systems test assembly
[DE81-025336] N82-11262

Tritium induced X-ray emission from glass shell inertial fusion targets
[DE81-025599] N82-11936

TROPICAL STORMS

Tropical storm movement based on synoptic map typing using empirical orthogonal functions
[AD-A104591] N82-11726

TROPOSPHERE

Shuttle applications in tropospheric air quality observations
[NASA-CR-145374] N82-11635

Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637

TRUSSES

Study of foldable elastic tubes for large space structure applications, phase 3
[NASA-CR-164929] N82-11493

TUNABLE LASERS

Two-dimensional theory and simulation of free electron lasers
[DE81-025365] N82-11461

TUNGSTEN

Analysis of standard reference materials by absolute INAA
[DE81-025925] N82-11900

TUNING

Low noise tuned amplifier
[NASA-CASE-GSC-12567-1] N82-11359

TURBINE BLADES

A new method of cooling turbine vanes
N82-11027

Analytical and experimental study of flow phenomena in noncavitating rocket pump inducers
[NASA-CR-3471] N82-11031

New molding method of three-dimensional hollow photoelastic model and centrifugal stress analysis of air cooled turbine blade model
[NAL-TR-427T] N82-11067

Trends in high temperature gas turbine materials
[NASA-TM-82715] N82-11182

TURBINE ENGINES

Development of multivariable controllers for aircraft turbine engines N82-11087

TURBINE PUMPS

Analytical and experimental study of flow phenomena in noncavitating rocket pump inducers
[NASA-CR-3471] N82-11031

Firefighting module development
[NASA-TM-82444] N82-11311

Advanced superposition methods for high speed turbopump vibration analysis
[NASA-CR-165379] N82-11485

Liquid oxygen turbopump technology
[NASA-CR-165467] N82-11468

TURBINES

Wind ripple analysis
[DE81-030129] N82-11044

TURBOCOMPRESSORS

Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023

A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025

TURBOFAN ENGINES

An assessment of the use of antimisting fuel in turbofan engines
[NASA-CR-165259] N82-11230

TURBOGENERATORS

Lewis Research Center's coal-fired, pressurized, fluidized-bed reactor test facility
[NASA-TM-81616] N82-11397

TURBOMACHINERY

Acta mechanica sinica
[AD-A105184] N82-11014

The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015

Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621

TURBULENCE

A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036

TURBULENT BOUNDARY LAYER

Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019

Prediction of turbulent boundary layer separation
N82-11022

Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024

TURBULENT FLOW

A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen
N82-11026

A new method of cooling turbine vanes
N82-11027

Wind-tunnel results for a modified 17-percent-thick low-speed airfoil section
[NASA-TP-1919] N82-11033

A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite element algorithm
[AD-A104514] N82-11055

A three-dimensional simulation of transition and early turbulence in a time-developing mixing layer
[NASA-CR-164942] N82-11393

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164938] N82-11394

Higher-level simulations of turbulent flows
NASA-CR-164936] N82-11395

Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164953] N82-11396

Maximal entropy in fluid and plasma turbulence: A review
[DE81-025388] N82-11946

TURBULENT JETS

Temperature measurement in turbulent arcs
N82-11921

TURBULENT MIXING

A three-dimensional simulation of transition and early turbulence in a time-developing mixing layer
[NASA-CR-164942] N82-11393

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164938] N82-11394

Time dependent mixing in a salt wedge estuary
N82-11755

TWO DIMENSIONAL FLOW

Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024

Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028

Some observations on a new numerical method for solving Navier-Stokes equations
[NASA-TP-1934] N82-11032

A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-8109] N82-11037

Analyses of ductile flow and fracture in two dimensions
[DE81-023651] N82-11506

TWO PHASE FLOW

Two-phase flow in geothermal energy sources
[DE81-029037] N82-11404

U

U.S.S.R.

Unique characteristics of financing science in the USSR
[PB81-212243] N82-11980

U.S.S.R. SPACE PROGRAM

Hungarian cosmonaut in space
[NASA-TM-76719] N82-11097

ULTRASHORT PULSED LASERS

Laser triggered spark gaps under experimental study N82-11451

ULTRASONIC RADIATION

Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121

Detection of ultrasonic waves in solids by an optical fiber interferometer N82-11123

DC calibration of the strain sensitivity of a single mode optical fiber interferometer N82-11124

Detection of acoustic emission in composites by optical fiber interferometry N82-11125

Pulsed-echo interface wave characterization of bolted plates N82-11126

Wideband optical measurements of ultrasonic pulses N82-11132

ULTRASONIC TESTS

Digital ultrasonics signal processing: Flaw data post processing use and description
[NASA-CR-161862] N82-11862

ULTRASONIC WAVE TRANSDUCERS

Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121

Optical fiber interferometer for the study of ultrasonic waves in composite materials, discussion
N82-11122

Detection of ultrasonic waves in solids by an optical fiber interferometer N82-11123

Pulsed-echo interface wave characterization of bolted plates N82-11126

Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127

Characterization of metal-polymer boundaries using Stoneley and Leaky waves N82-11128

Waves guided by a thin viscoelastic layer between elastic solids N82-11129

An ultrasonic transducer with Gaussian radial velocity distribution N82-11130

Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133

ULTRAVIOLET ASTRONOMY

Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003

ULTRAVIOLET RADIATION

Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104384] N82-11703

UNDERGROUND STORAGE

Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620

Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621

Evaluation of uncertainties in geologic information
[DE81-025997] N82-11714

Zircaloy cladding: Tough containment for spent fuel storage
[DE81-024105] N82-11896

UNDERGROUND TRANSMISSION LINES

Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: Including acousto-optic techniques
[DE81-029626] N82-11381

Research to develop guidelines for cathodic protection of concentric neutral cables, volume 1 — underground transmission lines
[DE81-904195] N82-11382

Research to develop guidelines for cathodic protection of concentric neutral cables, volume 2 — potential gradients and polarization curves
[DE81-904210] N82-11383

UNDERWATER COMMUNICATION

Investigation of the strength of shielded and unshielded underwater electrical cables
[AD-A104314] N82-11364

UNIFORM FLOW

Generation of axi-symmetric body shapes in subsonic flow by means of polynomial distributions of sources and doublets along the axis of symmetry
[C-OF-A-MEMO-8110] N82-11038

UNITED STATES OF AMERICA

Electric power supply and demand for the contiguous United States, 1981 - 1990
[DE81-027126] N82-11376

Workbook for estimating the climatology of regional continental scale atmospheric dispersion and deposition over the United States
[PB81-224172] N82-11748

UNSTEADY FLOW

Some problems in the calculation of flows with tangential discontinuities
[RAE-LIB-TRANS-2059] N82-11389

UPGRADING
Brookhaven National Laboratory Tandem accelerator upgrading program
[DE81-025093] N82-11897

UPPER ATMOSPHERE
Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104364] N82-11703
Design and fabrication of quadrupole ion mass spectrometer for upper atmosphere
[AD-A104319] N82-11705
US Monsoon Experiment MONEX rawinsonde/radiometersonde system
[PB81-222937] N82-11736

URANIUM COMPOUNDS
Selected values of chemical thermodynamic properties: Compounds of uranium, protactinium, thorium, actinium, and the alkali metals
[PB81-223463] N82-11170
Hydrogen storage-bed design for tritium systems test assembly
[DE81-025306] N82-11262

URBAN DEVELOPMENT
Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11718

URBAN PLANNING
Modeling energy-conservation potentials of community energy-system technologies
[DE81-026059] N82-11589

URBAN RESEARCH
Urban ecosystem and resource-conserving urbanism in Third World cities
[DE81-029654] N82-11995

USER MANUALS (COMPUTER PROGRAMS)
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500
Guide to the data-acquisition software of the Doublet III computer system
[DE81-026616] N82-11813

USER REQUIREMENTS
Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11238
User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325
Microfiche as a vehicle for technical reports
[PB81-226009] N82-11986

UTAH
Precipitation characteristics of summer storms at Straight Canyon barometer, Watershed, Utah
[PB81-223950] N82-11750

UTILITIES
Project demonstration of wind-turbine electricity: Interconnecting a northern Michigan fruit farm with a major utility
[DE81-030960] N82-11380
Analysis of the fuel and cost effects of interfacing utilities and small-power cogenerators
[DE81-028495] N82-11579

V

V/STOL AIRCRAFT
Low speed testing of the inlets designed for a tandem-fan V/STOL nacelle — conducted in the Lewis 10 by 10 foot wind tunnel
[NASA-TM-82728] N82-11042
A summary of V/STOL inlet analysis methods
[NASA-TM-82726] N82-11043
A numerical three-dimensional turbulent simulation of a subsonic VSTOL jet in a cross-flow using a finite element algorithm
[AD-A104514] N82-11055

VACANCIES (CRYSTAL DEFECTS)
Negative-U for point defects in silicon
[AD-A104482] N82-11966
Molecular dynamics simulation of grain-boundary diffusion of vacancies in bcc iron
[DE81-025540] N82-11973

VALENCE
Statistical versus valence neutron neutron capture in Mo-98
[DE81-023943] N82-11860

VAN DE GRAAFF ACCELERATORS
Brookhaven National Laboratory Tandem accelerator upgrading program
[DE81-025093] N82-11897

VAPOR PHASES
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176

VARIABLE PITCH PROPELLERS
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045

VARIABLE STARS
Nonradial pulsations of upsilon Orionis and supergiants
[DE81-025336] N82-12005
Theoretical and observational aspects of stellar variability N82-12007

VARIANCE (STATISTICS)
Removal of drift from frequency stability measurements N82-11298

VARIATIONAL PRINCIPLES
An energy integral and variational principle for plasma kinetic modes
[IPPJ-531] N82-11926

VECTOR SPACES
Vector integrals and products of vector measures
N82-11847

VEGETATION
Use of a vegetative filter zone to control fine-grained sediments from surface mines
[PB81-226110] N82-11674
Geothermal environmental assessment baseline study: Vegetation and soils of the Roosevelt Hot Springs geothermal resource area
[PB81-223299] N82-11717
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910

VELOCITY MEASUREMENT
Local earthquake travel times and spatial variations of crustal velocity in southern California N82-11687

VERMONT
New Hampshire and Vermont point source inventory update for NECRMP
[PB81-219339] N82-11672

VESTIBULAR TESTS
Otolithic reflex and space perception function of cosmonauts N82-11764

VIBRATION
An inexpensive, portable vibracoring system for shallow-water and land application
[AD-A104[illegible]3] N82-11314
Detection of vibrations in metallic structures using small passive magnetic fields
[AD-A104405] N82-11495
Vibration signature analysis and acoustic-emission monitoring at Brayton Point
[DE81-904232] N82-11507

VIBRATION DAMPING
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212

VIBRATION ISOLATORS
Polyurethane foams for aircraft shock mounts. 3: Vibration damping by polyether foams
[AD-A104496] N82-11212

VIBRATION MODE
Advanced superposition methods for high speed turbopump vibration analysis
[NASA-CR-165379] N82-11465

VIBRATIONAL SPECTRA
Stimulated Raman studies of CO2-laser-excited SF6
[DE81-025829] N82-11463
Molecular spectroscopy and relaxation in supersonic beams N82-11867
Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957

VINYL RADICAL
Reaction of oxygen atoms with ethylene and vinylbromide
[DE81-025206] N82-11879

VIRTUAL PROPERTIES
A simplified procedure for direct determination of real heights from virtual height data
[AD-A104374] N82-11702

VISCOELASTICITY
Waves guided by a thin viscoelastic layer between elastic solids N82-11129
Dynamic fracture in viscoelastic solids
[AD-A104687] N82-11494

VISCOSITY
Acoustic cavitation studies
[AD-A104409] N82-11863

VISCOUS FLOW
Some features of flow past slotted wings
[RAE-LIB-TRANS-2050] N82-11030
Analytical and experimental study of flow phenomena in noncavitating rocket pump inducers
[NASA-CR-3471] N82-11031

VISIBILITY
Estimates for the probabilities of surface-to-air cloud-free lines-of-sight and low cloud statistics from ship observations. Part 1: Fifteen marine locations
[AD-A104633] N82-11730

VISIBLE SPECTRUM
Optical and ultraviolet studies of stellar chromospheres of lambda Andromedae and other late-type stars N82-12003

VISUAL FLIGHT
Determining the training effectiveness and cost-effectiveness of visual flight simulators for military aircraft
[AD-A104627] N82-11091

VITRIFICATION
Evaluation and review of alternative waste forms for immobilization of high-level radioactive wastes
[DE81-026323] N82-11909

VOCODERS
Research on narrowband communications
[AD-A104296] N82-11345

VOICE COMMUNICATION
Research on narrowband communications
[AD-A104296] N82-11345
Packet Speech Systems Technology
[AD-A104373] N82-11348

VOIDS
Hot-spot initiation of heterogeneous explosives
[DE81-027801] N82-11266

VOLATILITY
Response of portable VOC analyzers to chemical mixtures
[PB81-234262] N82-11176
Preignition volatile yield as related to coal characteristics
[DE81-027584] N82-11250

VOLCANOES
Airborne radiological sampling of Mount St. Helens plumes
[PB81-213795] N82-11659

VOLTAGE REGULATORS
Motor power factor controller with a reduced voltage starter
[NASA-CASE-MFS-25586-1] N82-11360

VOLUME
The volumes and heat capacities of nonelectrolytes and organic electrolytes in methanol at 25 C
N82-11142

VORTEX FLAPS
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013

VORTICES
Some problems in the calculation of flows with tangential discontinuities
[RAE-LIB-TRANS-2059] N82-11369
Maximal entropy in fluid and plasma turbulence: A review
[DE81-025388] N82-11946
Acta Mechania Sinica
[AD-A105635] N82-12021
Difference method in fluid dynamics. 1. Numerical solution of two dimensional vorticity equation
N82-12022

W

WAFERS
Scriber for silicon wafers
[NASA-CASE-NPO-15539-1] N82-11469

WAKES
Some features of flow past slotted wings
[RAE-LIB-TRANS-2050] N82-11030
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036
A wake source model for non-symmetric flow past bluff bodies in two-dimensional flow
[C-OF-A-MEMO-8109] N82-11037
WALL PRESSURE
Novel design of pressure vessels and thermal shields in coal gasifiers
[DE81-025828] N82-11474
WALLS
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104562] N82-11402
WARFARE
Where are we in the space war?
[NASA-TM-76604] N82-11096
WARM FRONTS
Evaluation of photogrammetric flight under icing conditions on March 23, 1978
[NASA-TM-76617] N82-11725
WARNING SYSTEMS
Threat Alert and Collision Avoidance System (TCAS) Symposium
[AD-A104563] N82-11047
A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530
Recovery of seismic signals in noise by adaptive processing
[DE81-029469] N82-11713
Equipment for flood and flash flood warning systems
[PB81-224131] N82-11749
WASHINGTON
Index to observations of currents in Puget Sound, Washington, from 1908-1980
[PB81-224115] N82-11753
WASTE DISPOSAL
Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-028503] N82-11644
Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652
Evaluation of uncertainties in geologic information
[DE81-025997] N82-11714
Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161888] N82-11889
International safeguards for spent fuel storage
[DE81-029896] N82-11892
Uncertainty analysis for geologic disposal of radioactive waste
[DE81-027206] N82-11893
Materials considerations relative to multibarrier waste isolation
[DE81-029104] N82-11894
Zircaloy cladding: Tough containment for spent fuel storage
[DE81-024105] N82-11896
WASTE ENERGY UTILIZATION
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
Feasibility and economic study of medium-BTU coal gas blended with high-BTU by product gas as an industrial energy source at Billings, Montana
[DE81-025166] N82-11237
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029958] N82-11246
Cycle and performance analysis of absorption heat pumps for waste heat utilization
[DE81-030705] N82-11405
Fluid-bed heat-exchanger optimization and bed materials selection
[DOE/ET-11343/T2] N82-11571
Residual-energy-applications program: EAST-facility requirements document
[DE81-027489] N82-11616
WASTE TREATMENT
Waste-assimilation capacity of the Arkansas River in Pueblo County, Colorado, as it relates to water-quality guidelines and stream classification
[PB81-227340] N82-11540
EPA utility FGD (Flue Gas Desulfurization) survey
[PB81-225773] N82-11679
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890
Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027067] N82-11895
Evaluation and review of alternative waste forms for immobilization of high-level radioactive wastes
[DE81-026323] N82-11909
WASTE UTILIZATION
Assessment of hazard potential from combustion of wastes in industrial boilers
[PB81-221889] N82-11556
WASTE WATER
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029958] N82-11246
Magma Cooling-Tower process pilot-plant demonstration
[DE81-903783] N82-11406
WASTES
Survey of particulate emission macro- and micro-sampling and sizing methods
[DE81-026348] N82-11642
WATER COLOR
Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511
WATER CURRENTS
Index to observations of currents in Puget Sound, Washington, from 1908-1980
[PB81-224115] N82-11753
WATER FLOW
Firefighting module development
[NASA-TM-82444] N82-11311
Studies of heat transfer and water migration in soils
[DE81-023951] N82-11425
WATER HEATING
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4703-26] N82-11501
The Rogers focusing heliostat experimental program at Rensselaer Polytechnic Institute
[PB81-226813] N82-11625
WATER MANAGEMENT
Variations in climatic characteristics as related to evapotranspiration in South Park, Central Park County, Colorado
[PB81-219610] N82-11734
WATER POLLUTION
Detection of oil in water by a flame emission technique
[PB81-226185] N82-11178
Temperature and solute-transport simulation in streamflow using a Lagrangian reference frame
[PB81-225757] N82-11543
Industrial process fugitive emissions inventory for the Region V Great Lakes shoreline
[PB81-212037] N82-11658
A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11669
WATER PRESSURE
Conditional sampling of oceanic temperature and pressure
[AD-A104539] N82-11751
WATER QUALITY
Raft River geothermal project groundwater monitoring program
[DE81-030202] N82-11521
Water resources of upper separation creek basin, south-central Wyoming
[PB81-224283] N82-11531
Hydrologic reconnaissance near Fourth of July Creek, Seward, Alaska
[PB81-223752] N82-11532
Geology and hydrology for environmental planning in Marquette County, Michigan
[PB81-221467] N82-11534
Water resources data for Tennessee, water year 1979
[PB81-226249] N82-11539
Waste-assimilation capacity of the Arkansas River in Pueblo County, Colorado, as it relates to water-quality guidelines and stream classification
[PB81-227340] N82-11540
Water resources data for Maine, water year 1980
[PB81-226789] N82-11541
Water resources data for Oregon, water year 1979
[PB81-226771] N82-11542
Nitrogen dynamics in a lagoon development and an adjacent salt marsh N82-11632
Stabilization characteristics of deposits of biologic solids generated in aerated lagoons
[PB81-224297] N82-11668
Better monitoring techniques are needed to assess the quality of rivers and streams, volume 1
[PB81-225286] N82-11675
Better monitoring techniques are needed to assess the quality of rivers and streams, volume 2
[PB81-225294] N82-11676
Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991
Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992
WATER RECLAMATION
Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991
Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992
WATER RESOURCES
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270
Synthetic fuel development for the Upper Missouri River Basin. Section 13: Water assessment report
[PB81-224537] N82-11276
Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524
Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525
Water resources data for Kentucky, water year 1950
[PB81-223612] N82-11526
Water resources data for Michigan, water year 1980
[PB81-224180] N82-11527
Water resources data for Ohio, water year 1980. Volume 2: St. Lawrence River basin
[PB81-217077] N82-11528
Water resources of upper separation creek basin, south-central Wyoming
[PB81-224283] N82-11531
Geology and hydrology for environmental planning in Marquette County, Michigan
[PB81-221467] N82-11534
Water resources data for Tennessee, water year 1979
[PB81-226249] N82-11539
Water resources data for Maine, water year 1980
[PB81-226789] N82-11541
Water resources data for Oregon, water year 1979
[PB81-226771] N82-11542
WATER RUNOFF
A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530
Rainfall-runoff modeling and preliminary regional flood characteristics of small rural watersheds in the Arkansas river basin in Colorado
[PB81-224313] N82-11667
WATER TABLES
Water resources data for Maine, water year 1980
[PB81-226789] N82-11541
WATER TEMPERATURE
Temperature and solute-transport simulation in streamflow using a Lagrangian reference frame
[PB81-225757] N82-11543
Conditional sampling of oceanic temperature and pressure
[AD-A104539] N82-11751

WATER TREATMENT
Magma Cooling-Tower process pilot-plant demonstration
[DE81-903783] N82-11406
Sewage sludge additive
[NASA-CASE-NPO-13877-1] N82-11634

WATER WAVES
Critical wave conditions for sand motion initiation
[AD-A104376] N82-11400
Ocean energy-waves, currents, and tides
[DE81-025706] N82-11611
Wave propagation over rectangular trench
[PB81-220782] N82-11752

WATERSHEDS
Rainfall-runoff modeling and preliminary regional flood characteristics of small rural watersheds in the Arkansas river basin in Colorado
[PB81-224313] N82-11667
Precipitation characteristics of summer storms at Straight Canyon barometer, Watershed, Utah
[PB81-223850] N82-11750

WATERWAVE ENERGY CONVERSION
Ocean energy-waves, currents, and tides
[DE81-025706] N82-11611

WAVE AMPLIFICATION
Frontogenesis in the planetary boundary layer of an amplifying, two-dimensional baroclinic wave
N82-11721

WAVE DIFFRACTION
Acta mechanica sinica
[AD-A105184] N82-11014
The wave diagrams for diffraction and reflection of a traveling weak shock wave from an open end of a shock tube N82-11017

WAVE DISPERSION
Two-dimensional theory and simulation of free electron lasers
[DE81-025365] N82-11461

WAVE INTERACTION
Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699
Nonlinear waves on charged particle beams
N82-11865

WAVE PROPAGATION
Characterization of metal-polymer boundaries using Stoneley and Leaky waves N82-11128
Waves guided by a thin viscoelastic layer between elastic solids N82-11129
The deep space optical channel. 2: Wave propagation effects N82-11288
Wave propagation over rectangular trench
[PB81-220782] N82-11752
Oblique propagation of electron thermal modes below the electron plasma frequency without boundary effects
[IPPJ-533] N82-11928

WAVE REFLECTION
Acta mechanica sinica
[AD-A105184] N82-11014
The wave diagrams for diffraction and reflection of a traveling weak shock wave from an open end of a shock tube N82-11017

WAVE SCATTERING
The effects of toroidal geometry and scattering by density fluctuations on the accessibility and energy deposition of lower hybrid waves N82-11922
Stimulated Raman scattering in large plasmas
[DE81-026569] N82-11936

WAVEGUIDES
Design of throat section of conical corrugated horns N82-11292
Local distribution fiber optic cable communication system
[AD-A104491] N82-11911

WEATHER
Strategies for weather-dependent data acquisition
N82-11286

WEATHER FORECASTING
Operational environment, meteorological conditions and weather forecasting N82-11057
A systems approach to the real-time runoff analysis with a deterministic rainfall-runoff model
[PB81-224495] N82-11530
A numerical dynamical investigation of the role of subsynoptic inertial an isallobaric adjustments in organizing severe local storm ensembles
N82-11719
Tropical storm movement based on synoptic map typing using empirical orthogonal functions
[AD-A104591] N82-11726
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104595] N82-11729
A comparison of two methods for forecasting thunderstorms at Luke Air Force Base, Arizona
[PB81-225393] N82-11746

WEATHER MODIFICATION
Meteorological Effects of Thermal Energy Releases (METER) program
[DE81-030431] N82-11640

WEATHER STATIONS
An open-ocean marine fog development and forecast model for Ocean Weather Station Papa
[AD-A104595] N82-11729

WEDGES
A wake source model for asymmetric potential flow past bodies of wedge shape
[C-OF-A-MEMO-8112] N82-11036

WEIBULL DENSITY FUNCTIONS
Estimation problems associated with the Weibull distribution
[DE81-030466] N82-11641

WEIGHTING FUNCTIONS
A comparison of weighting techniques for SAW transducers at UHF
[AD-A104510] N82-11362

WELLS
Two-phase flow in geothermal energy sources
[DE81-029037] N82-11404
Well-water-source heat pump field performance study
[DE81-024136] N82-11419

WEST VIRGINIA
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270

WHITE DWARF STARS
Theoretical and observational aspects of stellar variability N82-12007

WIND (METEOROLOGY)
The wind climatology of American Samoa
[PB81-221012] N82-11733

WIND EFFECTS
Wind ripple analysis
[DE81-030129] N82-11044
Conductor fatigue-life research
[DE81-904209] N82-11369

WIND TUNNEL APPARATUS
Space shuttle solid rocket booster sting interference wind tunnel test analysis
[NASA-CR-161885] N82-11040

WIND TUNNEL MODELS
Space shuttle solid rocket booster sting interference wind tunnel test analysis
[NASA-CR-161885] N82-11040

WIND TUNNEL NOZZLES
Wind tunnel supplementary Mach number minimum section insert
[NASA-CASE-LAR-12532-1] N82-11068

WIND TUNNEL TESTS
Effects of vortex flaps on the low-speed aerodynamic characteristics of an arrow wing
[NASA-TP-1914] N82-11013
Wind-tunnel results for a modified 17-percent-thick low-speed airfoil section
[NASA-TP-1919] N82-11033
Space shuttle solid rocket booster sting interference wind tunnel test analysis
[NASA-CR-161885] N82-11040
Icing tunnel tests of a composite porous leading edge for use with a liquid anti-ice system — Lewis icing research tunnel
[NASA-CR-164966] N82-11052
Subsonic cascade wind tunnel tests using a compressor configuration of DCA blades
[AD-A104597] N82-11069
Correcting for the sidewall boundary layer in subsonic two-dimensional airfoil/hydrofoil testing
[AD-A104562] N82-11402
Helicopter rotor trailing edge noise — noise prediction
[NASA-CR-3470] N82-11659

WIND VARIATIONS
Wind ripple analysis
[DE81-030129] N82-11044

WINDPOWERED GENERATORS
Wind ripple analysis
[DE81-030129] N82-11044
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045
Project demonstration of wind-turbine electricity: Interconnecting a northern Michigan fruit farm with a major utility
[DE81-030950] N82-11380
Site selection for small wind energy conversion systems for US Department of Energy field evaluation program
[PB81-226862] N82-11624

WING LOADING
A study on numerical method for evaluating spanwise integral in subsonic lifting-surface theory
[NAL-TR-661T] N82-11035
Aeroacoustic theory for noncompact wing-gust interaction
[FDRL-81-7] N82-11071

WING PROFILES
An influence coefficient method for the application of the model technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070

WING ROOTS
Acta mechanica sinica
[AD-A105184] N82-11014
The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016

WING SLOTS
Some features of flow past slotted wings
[RAE-LIB-TRANS-2050] N82-11030

WING TANKS
Experimental study of fuel heating at low temperatures in a wing tank model, volume 1
[NASA-CR-165391] N82-11224

WINGS
Aircraft wing trailing-edge noise
[NASA-CR-164952] N82-11039
On the kernel function collocation method in steady subsonic flow for wing with control surfaces
N82-12023

WINTER
Ice conditions in the eastern Bering Sea from NOAA and LANDSAT imagery: Winter conditions 1974, 1976, 1977, 1979
[PB81-220188] N82-11537
Meridional heat transport at the onset of winter stratospheric warming
[NASA-TM-76614] N82-11697
The 4-day temperature wave in the winter polar stratosphere N82-11720

WISCONSIN
SOLPLAN report: An assessment of barriers and incentives to conservation and alternative-energy use in the residential sector in Wisconsin
[DOE/CS-30292/3] N82-11614

WYOMING
Water resources of upper separation creek basin, south-central Wyoming
[PB81-224263] N82-11531
COCORP traverses in Wyoming and Oklahoma
N82-11654

X

X RAY APPARATUS
Standard specification for apparatus for gamma radiography
[SABS-1317-1980] N82-11433

X RAY ASTRONOMY
X-ray and gamma-ray observations of pulsed emission from radio pulsars N82-12000

X RAY DIFFRACTION
High-temperature enthalpy and X-ray powder diffraction data for aluminum sulfide (Al2S)
[PB81-226250] N82-11174

X RAY FLUORESCENCE
Energy dispersive X-ray spectrometry: Proceedings of a Workshop on Energy Dispersive X-Ray Spectrometry
[PB81-226334] N82-11177

X RAY IMAGERY
Microstructures for high-energy X-ray and particle-imaging applications
[DE81-026531] N82-11899
X RAY IRRADIATION
Molecular events basic to cellular radiation response
[DE81-027898] N82-11776
X RAY LASERS
Theoretical investigations into possible X-ray and gamma-ray lasers N82-11445
X RAY SPECTRA
Tritium induced X-ray emission from glass shell inertial fusion targets
[DE81-025599] N82-11936
X RAY SPECTROSCOPY
Energy dispersive X-ray spectrometry: Proceedings of a Workshop on Energy Dispersive X-Ray Spectrometry
[PB81-226334] N82-11177

Y

YAWING MOMENTS
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045

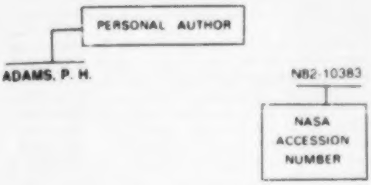
Z

ZEEMAN EFFECT
Spectrum of four-times ionized niobium, including Zeeman studies of selected lines and laser modification of the population of certain levels in a sliding spark source
[DE81-027554] N82-11968
ZENITH
Computation of averaged monthly zonal albedo utilizing the solar zenith angle, properties of clear and cloudy atmospheres
[NASA-CR-164930] N82-12010
ZINC
Speciation of labile and quasi-labile metal complex systems using the Kalman filter
[DE81-025678] N82-11194
ZINC ALLOYS
Activity and diffusion of metals in binary aluminum alloys
[DE81-025535] N82-11199
ZINC COMPOUNDS
Interface reactions in Mg/Zn3P2 solar cells
[DE81-025773] N82-11597
ZINC OXIDES
Zn3P2 as an improved semiconductor for photovoltaic solar cells
[DE81-025587] N82-11577
ZIRCALOYS (TRADEMARK)
Zircaloy cladding: Tough containment for spent fuel storage
[DE81-024105] N82-11896

PERSONAL AUTHOR INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 2

Typical Personal Author Index Listing



Listings in this Index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

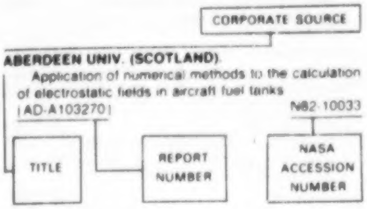
CORPORATE SOURCE INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 2

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ACRES AMERICAN, INC., BUFFALO, N.Y.

Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 8: Design approaches: UPH
[DE81-030673] N82-11620

ACRES AMERICAN, INC., COLUMBIA, MD.

Preliminary design study of underground pumped hydro and compressed-air energy storage in hard rock. Volume 9: Design approaches: CAES, appendix C. Major mechanical equipment
[DE81-030672] N82-11621

ACUREX CORP., MOUNTAIN VIEW, CALIF.

Kinetics of NO/ sub x formation during early stages of pulverized-coal combustion
[DE81-029071] N82-11641

Survey of particulate emission macro- and micro-sampling and sizing methods
[DE81-026348] N82-11642

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).

Rotorcraft icing: Status and prospects
[AGARD-AR-166] N82-11056

Operational environment, meteorological conditions and weather forecasting N82-11057

Technology base for icing instrumentation and mathematical modelling N82-11058

Facilities for development and clearance N82-11059

Ice protection system technology N82-11060

Proposed standard requirements and procedures for icing clearance N82-11061

Theory and applications of optimal control in aerospace systems
[AGARD-AG-251] N82-11073

AEROCHEM RESEARCH LABS., INC., PRINCETON, N. J.

Soot formation in synfuels
[DE81-030273] N82-11164

AEROJET ENERGY CONSERVATION CO., SACRAMENTO, CALIF.

Fluid-bed heat-exchanger optimization and bed materials selection
[DOE/ET-11343/T2] N82-11571

AERONAUTICAL SYSTEMS DIV., WRIGHT-PATTERSON AFB, OHIO.

Investigation of spatial disorientation of F-15 Eagle pilots
[AD-A104684] N82-11781

AEROSPACE CORP., EL SEGUNDO, CALIF.

Random error propagation analysis in the plume diagnostic code EMABIC
[AD-A104495] N82-11112

Thermal expansion of metal matrix composites
[AD-A104680] N82-11134

AEROSPACE CORP., LOS ANGELES, CALIF.

Near-term goals for alcohol fuels from biomass: An overview of resource requirements, land use, environmental, and socioeconomic impacts
[DE81-029987] N82-11245

Assessment of flywheel system benefits in selected vehicle applications
[DE81-025976] N82-11997

AGRI STILLS OF AMERICA, SPRINGFIELD, ILL.

Development of a small-scale commercial alcohol dehydration 190 to 200 proof
[DE81-030158] N82-11235

AIR FORCE ACADEMY, COLO.

Military space doctrine: The great frontier
[AD-A104574] N82-11990

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.

The angular impact distribution of charged particles attracted to a charged cylindrical spacecraft
[AD-A104519] N82-11106

Stratospheric trace gas composition studies utilizing in situ cryogenic, whole-air sampling methods
[AD-A104375] N82-11689

High latitude electron detectors on Satellite P78-1: Preliminary data results
[AD-A104518] N82-11701

A simplified procedure for direct determination of real heights from virtual height data
[AD-A104374] N82-11702

Rocket data of solar EUV flux, thermospheric electron flux and N2 second-positive airglow emission
[AD-A104384] N82-11703

Report on research at AFGL
[AD-A104513] N82-11704

An assessment of detecting mesoscale rainfall from mid-latitude cyclones using GOES imagery data
[AD-A104377] N82-11726

AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TEX.

Second Image Generation/Display Conference: Closing comments
[AD-A104676] N82-11807

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.

Fidelity optimization of microprocessor system simulations
[AD-A104679] N82-11786

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.

Acta mechanica sinica
[AD-A105184] N82-11014

The arbitrary quasi-orthogonal surface method for computing three-dimensional flow in turbine machinery. 2. Calculation of the three-dimensional flow with the S sub 1-surface twisted N82-11015

The principles and methods for shaping the wing root regions of a wing-body combination at transonic and lower supersonic speeds N82-11016

Acta Mechanica Sinica (selected articles)
[AD-A105636] N82-11019

On transonic flow in hyperbolic Laval nozzles N82-11020

Compression processes of free pistons after the opening of nozzle in a hypersonic gun tunnel N82-11021

Prediction of turbulent boundary layer separation N82-11022

Journal of Engineering Thermophysics (selected articles)
[AD-A105604] N82-11023

Theoretical investigations and experimental researches for higher subsonic two-dimensional compressor cascade N82-11024

A theoretical analysis of the stream surface of revolution with supersonic inlet flow in a transonic axial compressor N82-11025

A primary research on ablation experiment technique of the turbulent flow over a flat plate specimen N82-11026

A new method of cooling turbine vanes N82-11027

Research on the recirculating flow rate in the wake of two-dimensional flame stabilizers (under cold conditions) N82-11028

Acta Mechania Sinica
[AD-A105635] N82-12021

Difference method in fluid dynamics. 1. Numerical solution of two dimensional vorticity equation N82-12022

On the kernel function collocation method in steady subsonic flow for wing with control surfaces N82-12023

On the capacity of holographic phase-shift interferometric technique in the visualization of low density flows N82-12024

Analytical design for internal burning star grains of solid rockets N82-12025

Numerical computation and analysis of the flow field in a large shock tube with a variable cross-sectional area N82-12026

AIR FORCE WEAPONS LAB., KIRTLAND AFB, N. MEX.

High energy density capacitor testing for the AFWL SHIVA
[DE81-023666] N82-11379

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.

Jet fuel locks to shale oil: The 1980 technology review
[AD-A104414] N82-11228

Mass spectrometry of the CO2 laser plasma
[AD-A104344] N82-11454

AIR PRODUCTS AND CHEMICALS, INC., ALLENTOWN, PA.

Catalyst and reactor development for a liquid-phase Fischer-Tropsch process
[DE81-028209] N82-11168

AIRESEARCH MFG. CO., TORRANCE, CALIF.

Brayton/Rankine 10-ton gas-fired space conditioning system, phase 2
[PB81-223372] N82-11478

Light-commercial Brayton/Rankine space-conditioning system
[DE81-024137] N82-11586

ALASKA UNIV., FAIRBANKS.

Imperfect magnetosphere-ionosphere coupling and discrete auroras
[AD-A104509] N82-11699

AMERICAN SOCIETY OF HEATING, REFRIGERATING AND AIR-CONDITIONING ENGINEERS, NEW YORK.

Energy analysis sample building data
[DE81-027188] N82-11318

Proposed simplified energy calculation procedure for use in energy conservation standards activities
[DE81-027190] N82-11319

AMERIGAS, INC., VALLEY FORGE, PA.
Conceptual design for a multi-user medium BTU coal gasification complex. Volume 1: Executive summary
[DE81-027139] N82-11236
AMES LAB., IOWA.
Superconducting proximity effect for in situ and model layered systems
[DE81-025530] N82-11372
Hodges residence: Performance of a direct gain passive solar home in Iowa
[DE81-025528] N82-11581
Liquid-liquid chromatography fractionation of organic compounds in complex mixtures: Application to automobile exhaust
[DE81-030743] N82-11650
ANACAPA SCIENCES, INC., SANTA BARBARA, CALIF.
Conceptual design of a computer-generated topographic display system to aid mission planning and mission conduct by Army aviators
[AD-A104386] N82-11517
ANALYTIC SCIENCES CORP., READING, MASS.
Application of optimal control techniques to tactical missile guidance N82-11066
Military geodesy and geospace science, unit three
[AD-A105072] N82-11711
ANALYTICAL MECHANICS ASSOCIATES, INC., HAMPTON, VA.
An influence coefficient method for the application of the modal technique to wing flutter suppression of the DAST ARW-1 wing
[NASA-CR-165772] N82-11070
APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., LAUREL, MD.
Energy programs at the John Hopkins University Applied Physics Laboratory
[PB81-218141] N82-11535
ARGONNE NATIONAL LAB., ILL.
Vertical combustor for refuse combustion
[DE81-030002] N82-11152
Materials technology for coal-conversion processes
[DE81-026474] N82-11169
Advanced system experimental facility: Solid waste to methane gas. Background and process description
[DE81-030196] N82-11244
Site And Neighborhood Design (SAND): Development of simplified automated building thermal load procedures, phase 1
[DE81-027138] N82-11317
Petroleum geology and resource assessment of the middle Caspian Basin, USSR, with special emphasis on the Uzen field
[DE81-029951] N82-11518
Preliminary evaluation of advanced coal-based electricity-generating technologies by means of system-integration analysis
[DE81-029969] N82-11573
Calcium/metal sulfide battery development program
[ANL-81-14] N82-11578
Analysis of the fuel and cost effects of interfacing utilities and small-power cogenerators
[DE81-026495] N82-11579
Recent advances in lead-acid cell research and development
[DE81-023104] N82-11580
Solid and hazardous energy wastes: Synfuels. 1: Review of research activities
[DE81-026503] N82-11644
Role of excited states of molecular ions in structure studies with high-energy collisions
[DE81-023698] N82-11861
Comparison of costs for solidification of high-level radioactive waste solutions: Glass monoliths vs. metal matrices
[ANL-80-121] N82-11890
Storage ring injection
[DE81-023646] N82-11901
Heavy ion fusion program at Argonne
[DE81-023605] N82-11902
Electronic structure and many-body effects in Pd
[DE81-023110] N82-11970
Lithium/iron sulfide cell development for electric-vehicle propulsion
[DE81-023570] N82-11996
ARIZONA DEPT. OF WATER RESOURCES, PHOENIX.
Equipment for flood and flash flood warning systems
[PB81-224131] N82-11749
ARIZONA STATE UNIV., TEMPE.
A structural study of aluminosilicate glasses by Raman spectroscopy N82-11138
ARIZONA UNIV., TUCSON.
Sulfur pollution control. Phase 1: The disposal program
[PB81-222612] N82-11652
Sulfur pollution control. Phase 2: The impact of stack gas cleanup on the sulfur mining industry of Texas and Louisiana
[PB81-222820] N82-11653
Sulfur pollution control. Phase 1: The disposal program (sections 5 through 7)
[PB81-222804] N82-11655
Liners of natural porous materials to minimize pollutant migration
[PB81-221863] N82-11663
ARKANSAS UNIV., FAYETTEVILLE.
Mississippi County Community College solar photovoltaic project
[DE81-030689] N82-11554
ARKLA INDUSTRIES, INC., EVANSVILLE, IND.
Development and demonstration of an ammonia-water absorption heat pump
[DE81-024126] N82-11424
ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, DOVER, N. J.
The effects of gaseous atmospheres on the performance characteristics of aluminum-sodium nitrate flares
[AD-A104383] N82-11227
ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, WATERVLIET, N. Y.
Activation of superalloys and stainless steels for chromium plating
[AD-A104313] N82-11188
ARMY ELECTRONICS RESEARCH AND DEVELOPMENT COMMAND, FORT MONMOUTH, N. J.
Evaluation of alpha aluminum phosphate for advanced acoustic wave devices
[AD-A104685] N82-11962
ARMY ENGINEER WATERWAYS EXPERIMENT STATION, VICKSBURG, MISS.
Probabilistic modeling of subgrade soil strengths
[AD-A104336] N82-11315
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 1: Program development and numerical presentations
[AD-A104545] N82-11498
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 2: Manual for the WESLIQID finite element program
[AD-A104546] N82-11499
Structural analysis computer programs for rigid multicomponent pavement structures with discontinuities, WESLIQID and WESLAYER. Report 3: Manual for the WESLAYER finite element program
[AD-A104547] N82-11500
Inclusion of a simple vegetation layer in terrain temperature models for thermal infrared (IR) signature prediction
[AD-A104469] N82-11910
ARMY MATERIALS AND MECHANICS RESEARCH CENTER, WATERTOWN, MASS.
Mechanism of Monuron-accelerated dicyandiamide cure of epoxy resins
[AD-A104658] N82-11213
ARMY RESEARCH AND TECHNOLOGY LABS., MOFFETT FIELD, CALIF.
A computer solution to the stationary Navier-Stokes equations in two dimensions with proven convergence
[NASA-TM-81300] N82-11396
ARO, INC., ARNOLD AIR FORCE STATION, TENN.
Analytical studies of high-pressure MHD accelerators
[AD-A104666] N82-11930
ATHENS COLL., ALA.
Space processing of electronic materials
[NASA-CR-161882] N82-11094
ATMOSPHERIC RADIATION CONSULTANTS, ACTION, MASS.
Proof of concept study
[AD-A104338] N82-11639
AUBURN UNIV., ALA.
Conductor fatigue-life research
[DE81-904209] N82-11369
AUTOMATION INDUSTRIES, INC., SILVER SPRING, MD.
Solar energy system performance evaluation: Forest City Dillon, Washington, D.C., January 1980 - December 1980
[DE81-028174] N82-11560
Solar energy system performance evaluation: Montecito Pines, Santa Rosa, California, November 1979 - April 1980
[DE81-028175] N82-11561
AVCO-EVERETT RESEARCH LAB., MASS.
Preignition volatile yield as related to coal characteristics
[DE81-027584] N82-11250
Conceptual design of an angular multiplexed rare gas halide laser fusion driver
[DE81-029900] N82-11458

B

BABCOCK AND WILCOX CO., ALLIANCE, OHIO.
Computational tools for pulverized-coal combustion
[DE81-028582] N82-11148
BALL AEROSPACE SYSTEMS DIV., BOULDER, COLO.
Development of the coastal zone color scanner for NIMBUS 7. Volume 1: Mission objectives and instrument description
[NASA-CR-166720-VOL-1] N82-11511
BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
Development of inverse Raman spectroscopy for probing rapidly decomposing explosives and propellants
[AD-A104382] N82-11226
Numerical differentiation of noisy data
[AD-A104631] N82-11831
BARRY (THEODORE) AND ASSOCIATES, LOS ANGELES, CALIF.
Study of photovoltaic cost elements. Volume 1: Executive report. Volume 2: Project background
[DE81-030982] N82-11566
Study of photovoltaic cost elements. Volume 3: Sandia National Laboratories photovoltaic systems design catalog
[DE81-030986] N82-11567
Study of photovoltaic cost elements. Volume 4: Installation cost model for residential PV systems: Users manual
[DE81-031921] N82-11568
Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569
BATTELLE COLUMBUS LABS., OHIO.
Thermal and chemical effects in high pressure rolling/sliding contacts
[AD-A104473] N82-11471
BATTELLE MEMORIAL INST., COLUMBUS, OHIO.
Conduct a state-of-the-art survey of existing knowledge for the design of ground-source heat pumps
[DE81-024084] N82-11420
BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
Techniques for geothermal liquid sampling and analysis
[DE81-030151] N82-11149
Deposition and corrosion phenomena on aluminum surfaces under deluged dry cooling-tower conditions
[DE81-025483] N82-11193
Production and utilization of methane from anaerobic sludge digestion in U.S. wastewater-treatment plants
[DE81-029958] N82-11246
Transportation fuels from synthetic gas
[DE81-029614] N82-11258
Sampling design for the 1980 commercial and multifamily residential building survey
[DE81-028783] N82-11320

Mean values and an inverse problem for porous media flow
[DE81-027210] N82-11411

BECHTEL CORP., SAN FRANCISCO, CALIF.
Alternative fuel for the steel industry of Northern Indiana: A prefeasibility study of a central coal gasification project
[DE81-029314] N82-11233

BEDFORD RESEARCH ASSOCIATES, MASS.
Chebyshev polynomial approximation in the OPAQUE program
[AD-A104317] N82-11638
Two variable modelling of equatorward boundary of auroral precipitation
[AD-A104378] N82-11708
Data base specifications for the OPAQUE program
[AD-A104340] N82-11709

BELL-NORTHERN RESEARCH LTD., OTTAWA (ONTARIO).
Electromagnetic field mapping of cylinder and missile nosecone
[AD-A104312] N82-11104

BEN GURION UNIV. OF THE NEGEV, BEERSHEVA (ISRAEL).
Dislocation induced noises in semiconductors at low and high temperatures
[AD-A104449] N82-11960

BENDIX CORP., KANSAS CITY, MO.
Stress relaxation of cellular silicone material: 1981
[DE81-030692] N82-11137
Tooling for electrochemical deburring
[DE81-030190] N82-11475

BETH ISRAEL HOSPITAL, BOSTON, MASS.
Molecular events basic to cellular radiation response
[DE81-027896] N82-11776

BIONETICS CORP., HAMPTON, VA.
Small conductive particle sensor
[NASA-CASE-LAR-12552-1] N82-11431
Handbook for industrial noise control
[NASA-SP-5108] N82-11858

BODENSEEWERK GERAETETECHNIK G.M.B.H., UEBERLINGEN (WEST GERMANY).
Practical design and realization of a digital adaptive flight control system N82-11079

BOEING AEROSPACE CO., SEATTLE, WASH.
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems. Volume 1: Executive summary
[NASA-CR-165502-VOL-1] N82-11110
Study of electrical and chemical propulsion systems for auxiliary propulsion of large space systems, volume 2
[NASA-CR-165502-VOL-2] N82-11111
Analysis of space systems study for the space disposal of nuclear waste study report. Volume 2: Technical report
[NASA-CR-161888] N82-11889

BOEING CO., HOUSTON, TEX.
Automated water monitor system field demonstration test report. Volume 1: Executive summary
[NASA-CR-166228] N82-11991
Automated water monitor system field demonstration test report. Volume 2: Technical summary
[NASA-CR-166229] N82-11992

BOEING CO., SEATTLE, WASH.
Pulsed DF laser effects study
[AD-A104575] N82-11457

BOEING MILITARY AIRPLANE DEVELOPMENT, SEATTLE, WASH.
Aircraft digital input controlled hydraulic actuation and control system
[AD-A104263] N82-11072

BOLT, BERANEK, AND NEWMAN, INC., CAMBRIDGE, MASS.
Research on narrowband communications
[AD-A104296] N82-11345

BOOZ-ALLEN AND HAMILTON, INC., BETHESDA, MD.
User needs for solar decision-making tools: The homebuilding industry
[DE81-027293] N82-11325

BOSTON COLL., CHESTNUT HILL, MASS.
Particle trajectories in a model electric field 1
[AD-A104507] N82-11870

BOSTON COLL., WESTON, MASS.
Exploration of coal and anthracitic carbonaceous shale resources, Narraganett Basin, Massachusetts, and Rhode Island
[DE81-030695] N82-11523

BRITISH BROADCASTING CORP., KINGSWOOD (ENGLAND).
The use of remote active deflectors for feeding UHF relay stations
[BBC-RD-1981/5] N82-11334
Acoustic scaling: A review of progress to date, and of possible future development

[DE81-031921] N82-11568
Study of photovoltaic cost elements. Volume 5: Installation cost model for intermediate PV systems: Users manual
[DE81-030981] N82-11569
Second generation heliostat program, September 1979-March 1981
[DE81-029752] N82-11570
Design, cost and performance comparisons of several solar thermal systems for process heat. Volume 1: Executive summary
[DE81-029661] N82-11576

SCHOOL OF AEROSPACE MEDICINE, BROOKS AFB, TEX.
Optoacoustic spectroscopy to detect hydrazine fuels
[AD-A104675] N82-11229

SCIENCE APPLICATIONS, INC., BELLEVUE, WASH.
Ice conditions in the eastern Bering Sea from NOAA and LANDSAT imagery: Winter conditions 1974, 1976, 1977, 1979
[PB81-220168] N82-11537

SCIENCE APPLICATIONS, INC., BOULDER, COLO.
Magnetic fusion energy program, volume 1
[SAI-254-80-656-LJ-VOL-1] N82-11955
Magnetic fusion energy program, volume 2
[SAI-254-80-656-LJ-VOL-2] N82-11956

SCIENCE APPLICATIONS, INC., MCLEAN, VA.
Parametric sensitivity study for solar-assisted heat-pump systems
[DE81-030309] N82-11407
Identification of geopressured occurrences outside of the Gulf Coast
[DE81-025511] N82-11522

SCRIPPS INSTITUTION OF OCEANOGRAPHY, LA JOLLA, CALIF.
Measurements of aerosol size distribution in the lower troposphere over northern Europe
[AD-A104272] N82-11637

SHD ASSOCIATES, INC., EVANSTON, ILL.
Surface-tension induced instabilities: Effects of lateral boundaries
[NASA-CR-165530] N82-11390

SHEFFIELD UNIV. (ENGLAND).
Content representation for retrieval
[PB81-170672] N82-11984

SINGER CO., BINGHAMTON, N.Y.
Reliability and maintainability assessment report for laser scanner image generation system, revision A
[AD-A104239] N82-11455

SMITHSONIAN ASTROPHYSICAL OBSERVATORY, CAMBRIDGE, MASS.
Study of the time evolution of the lithosphere
[NASA-CR-164966] N82-11696
Theoretical studies of chromospheres and winds in cool stars
[NASA-CR-164969] N82-12004

SOUTH AFRICAN BUREAU OF STANDARDS, PRETORIA.

Standard specification for light ladders
[SABS-1304-1980] N82-11277

Standard specification for industrial safety-belt assemblies
[SABS-809-1980] N82-11278

Standard specification for apparatus for gamma radiography
[SABS-1317-1980] N82-11433

Standard specification for air-brake reservoirs
[SABS-1312-1980] N82-11464

SOUTH CAROLINA ENERGY RESEARCH INST., COLUMBIA.

Residual-energy-applications program: EAST-facility requirements document
[DE81-027486] N82-11616

SOUTH CAROLINA UNIV., COLUMBIA.

Use of polyethers in the treatment of acidic high-activity nuclear wastes
[DE81-027067] N82-11895

SOUTHWEST FLORIDA WATER MANAGEMENT DISTRICT, BROOKSVILLE.

Ground-water hydrology of the Dade City area, Pasco County, Florida, with emphasis on the hydrologic effects of pumping from the Foridian aquifer
[PB81-225518] N82-11529

SPIRE CORP., BEDFORD, MASS.

Processing of silicon solar cells by ion implantation and laser annealing
[NASA-CR-165293] N82-11546

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.

Improved simulation of aerosol, cloud, and density measurements by shuttle lidar
[NASA-CR-3473] N82-11666

ALTAIR radar study of equatorial spread F
[AD-A104664] N82-11710

OBJ-1: A study in executable algebraic formal specification
[AD-A104498] N82-11603

STANFORD LINEAR ACCELERATOR CENTER, CALIF.

Projection pursuit methods for data analysis
[DE81-027490] N82-11642

Oxide effects on photoemission from high current GaAs photocathodes
[DE81-025129] N82-11972

STANFORD UNIV., CALIF.

An overview of optimal control in aerospace systems N82-11074

Algorithm for computing in-situ combustion oil recovery performance
[DE81-030340] N82-11153

A three-dimensional simulation of transition and early turbulence in a time-developing mixing layer
[NASA-CR-164942] N82-11393

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence
[NASA-CR-164935] N82-11394

Higher-level simulations of turbulent flows
[NASA-CR-164936] N82-11395

Numerical simulation of a compressible homogeneous, turbulent shear flow
[NASA-CR-164933] N82-11396

Feasible objective confidence bounds for system reliability
[AD-A104260] N82-11483

Integrating medical knowledge and clinical data banks: Discovery and representation of causal relationships from a large time-oriented clinical database. The RX project
[PB81-227233] N82-11987

STATE UNIV. OF NEW YORK AT ALBANY.

Site selection for small wind energy conversion systems for US Department of Energy field evaluation program
[PB81-226502] N82-11624

STATE UNIV. OF NEW YORK AT BUFFALO.

Temperature measurement in turbulent arcs N82-11921

STATE UNIV. OF NEW YORK AT STONY BROOK.

A geochemical and sedimentological study of the dredged material deposit in the New York Bight
[PB81-224107] N82-11650

STONEHART ASSOCIATES, INC., MADISON, CONN.

Survey on aging on electrodes and electrocatalysts in phosphoric acid fuel cells
[NASA-CR-165506] N82-11545

SUSQUEHANNA RIVER BASIN COMMISSION, HARRISBURG, PA.

Flow routing in the Susquehanna River Basin: Part 4 - routing reservoir releases in the eastern Susquehanna River Basin in New York State
[PB81-221533] N82-11533

SYDNEY UNIV. (AUSTRALIA).

A review of the behaviour and engineering properties of carbonate soils
[PB81-226722] N82-11331

SYRACUSE RESEARCH CORP., N. Y.

Three prototype designs for an exterior-mounted, interior-operated, movable insulation system
[DE81-025586] N82-11324

SYSTEMS AND APPLIED SCIENCES CORP., RIVERDALE, MD.

Antenna pattern modification for single reflector antennas
[NASA-CR-166711] N82-11338

SYSTEMS CONTROL, INC., PALO ALTO, CALIF.

Development of multivariable controllers for aircraft turbine engines N82-11087

T

TELEDYNE BROWN ENGINEERING, HUNTSVILLE, ALA.

Investigation of direct solar-to-microwave energy conversion techniques
[NASA-CR-161883] N82-11544

TELEDYNE CONTINENTAL MOTORS, MUSKEGON, MICH.

Lightweight diesel engine designs for commuter type aircraft
[NASA-CR-165470] N82-11066

TELEDYNE ENERGY SYSTEMS, TIMONIUM, MD.

Advanced selenide thermoelectric development program
[DE81-027823] N82-11562

TENNESSEE DEPT. OF CONSERVATION, NASHVILLE.

Water resources data for Tennessee, water year 1979
[PB81-228249] N82-11539

TENNESSEE VALLEY AUTHORITY, KNOXVILLE.

Water resources data for Tennessee, water year 1979
[PB81-228249] N82-11539

TEXAS INSTRUMENTS, INC., DALLAS.

Binary/analog CCD correlator development
[AD-A104436] N82-11363

R&D services to develop an improved isolation technology radiation hardened bipolar integrated circuits (PEDIC)
[AD-A104657] N82-11367

TEXAS RESEARCH INST., INC., AUSTIN.

Investigation of the strength of shielded and unshielded underwater electrical cables
[AD-A104314] N82-11364

TEXAS UNIV. AT ARLINGTON.

Modal analysis using a Fourier analyzer, curve-fitting, and modal tuning
[NASA-CR-161886] N82-11490

Crustal deformation and seismic measurements in the region of McDonald Observatory, West Texas
[NASA-CR-164964] N82-11695

TEXAS UNIV. AT AUSTIN.

Ion thermal conductivity for a pure Tokamak plasma
[DE81-029710] N82-11932

TOLEDO UNIV., OHIO.

Photoelectric surface brightness observations and the geometry of reflection nebulae N82-12002

TOWER SYSTEMS, INC., TACOMA, WASH.

Magma Cooling-Tower process pilot-plant demonstration
[DE81-903783] N82-11406

TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF.

Radiation testing of composite materials, in situ versus ex situ effects
[NASA-CR-3475] N82-11116

TRW, INC., MCLEAN, VA.

Gas recovery from coal deposits
[PB81-222291] N82-11271

Environmental research plan for gas supply technologies. Volume 2: Environmental research plan
[PB81-222317] N82-11274

Environmental research plan for gas supply technologies. Volume 1: Executive summary
[PB81-222309] N82-11657

TRW, INC., REDONDO BEACH, CALIF.

Laboratory study for removal of organic sulfur from coal
[DE81-025132] N82-11239

TUFTS UNIV., MEDFORD, MASS.

Studies for the stabilization of coal-oil mixtures
[DOE/ET-10746/T1] N82-11156

U

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.

Development of prediction method for transonic shock induced separated flow
[AD-A104566] N82-11403

Helicopter rotor trailing edge noise
[NASA-CR-3470] N82-11659

UNIVERSITE CATHOLIQUE DE LOUVAIN (BELGIUM).

Theory of stochastic optimal control some basic notions N82-11075

UNIVERSITY OF SOUTHERN CALIFORNIA, LOS ANGELES.

The planning and management of California's coastal resources
[PB81-224057] N82-11670

Wave propagation over rectangular trench
[PB81-220782] N82-11752

UTAH STATE UNIV., LOGAN.

Proof of concept study
[AD-A104338] N82-11639

UTAH UNIV., SALT LAKE CITY.

Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/1] N82-11259

Chemistry and catalysis of coal liquefaction: Catalytic and thermal upgrading of coal liquid and hydrogenation of CO to produce fuels
[DOE/ET-14700/2] N82-11260

V

VANDERBILT UNIV., NASHVILLE, TENN.

Homeomorphisms of some direct limit spaces N82-11848

VARTA BATTERIE A.G., KELKHEIM (WEST GERMANY).

Recent advances in lead-acid cell research and development
[DE81-023104] N82-11580

VIRGINIA HIGHWAY AND TRANSPORTATION RESEARCH COUNCIL, CHARLOTTESVILLE.

Jointless bridges
[PB81-227736] N82-11332

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.

Optical fiber interferometer for the study of ultrasonic waves in composite materials
[NASA-CR-164916] N82-11121

Optical fiber interferometer for the study of ultrasonic waves in composite materials, discussion N82-11122

Detection of acoustic emission in composites by optical fiber interferometry N82-11125

Pulsed-echo interface wave characterization of bolted plates N82-11126

Attenuation of ultrasonic interface waves on metal-polymer-metal boundaries N82-11127

Characterization of metal-polymer boundaries using Stoneley and Leaky waves N82-11128

Waves guided by a thin viscoelastic layer between elastic solids N82-11129

An ultrasonic transducer with Gaussian radial velocity distribution N82-11130

Optical detection of pulsed surface particle displacements N82-11131

Dual differential interferometer for measurements of broadband surface acoustic waves N82-11133

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-029125] N82-11166

Development and application of analytical techniques to chemistry of donor solvent liquefaction
[DE81-025961] N82-11167

W

WASHINGTON STATE UNIV., PULLMAN.
Multiple-instruction, multiple-data path computers: Parallel processing impact on flight simulation software
[AD-A104506] N82-11789
Light scattering by bubbles in liquids or in glass
[AD-A104241] N82-11912

WASHINGTON UNIV., SEATTLE.
Physical studies of aromatic methylenes
N82-11113
Identification of lithologic units using multichannel imaging systems N82-11509
Effects of planform geometry on tidal flushing and mixing in Marinas
[PB81-219537] N82-11660
Adaptation of land use to surficial geology in metropolitan Washington, D.C. N82-11718
Numerical simulation of the dynamics, cloud microphysics and radar echo structures of tropical and mid-latitude convection N82-11722
On the computation of barotropic tides in deep estuaries with application to Knight Inlet, British Columbia
[PB81-220147] N82-11754
Time dependent mixing in a salt wedge estuary
N82-11755
An inverse technique for determination of mean ocean circulation N82-11756
Multilinear pseudodifferential operators and paraproducts N82-11825
Vibrational spectra and atom-atom potentials in the crystalline state. 1: A comparison of hexasulfur, octasulfur and dodecasulfur. 2: A study of solid allene N82-11957
The Bogoliubov transformation and its application to cosmological particle production N82-12009

WASHINGTON UNIV. TECHNOLOGY ASSOCIATES, INC., ST. LOUIS, MO.
Yawing of wind turbines with blade cyclic pitch variation
[DE81-030091] N82-11045

WATER AND POWER RESOURCES SERVICE, DENVER, COLO.
Impinging jets
[PB81-227902] N82-11392

WATER RESOURCES COUNCIL, WASHINGTON, D.C.
Coal liquefaction demonstration plant near Morgantown, West Virginia; water assessment report section 13(b)
[PB81-216095] N82-11269
Coal liquefaction demonstration plant near Morgantown, West Virginia: Water assessment report
[PB81-216103] N82-11270
Great Plains gasification project, Mercer County, North Dakota; water assessment report section 13(c)
[PB81-216111] N82-11524
Great Plains gasification project, Mercer County, North Dakota; water assessment report
[PB81-216129] N82-11525

WENTWORTH INST., BOSTON, MASS.
Design and fabrication of quadrupole ion mass spectrometer for upper atmosphere
[AD-A104319] N82-11705

WESTINGHOUSE ELECTRIC CORP., LINTHICUM HEIGHTS, MD.
ATS-6 12 year in orbit evaluation
[NASA-CR-166726] N82-11101

WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Lightweight concrete materials and structural systems for water tanks for thermal storage
[COO-4703-26] N82-11501
Development, testing, and evaluation of MHD materials and component designs. Volume 1: Executive summary
[DE81-026203] N82-11947

WESTINGHOUSE RESEARCH AND DEVELOPMENT CENTER, PITTSBURGH, PA.
Design of refractories for resistance to high-temperature erosion-corrosion
[DE81-904208] N82-11217
Acoustic waveguide technique for sensing incipient faults in underground power-transmission cables: Including acousto-optic techniques
[DE81-029626] N82-11381

WISCONSIN CENTER FOR PUBLIC POLICY, MADISON.
SOLPLAN report: An assessment of barriers and incentives to conservation and alternative-energy use in the residential sector in Wisconsin
[DOE/CS-30292/3] N82-11814

WISCONSIN UNIV. - MADISON.
Recent advances in statistical methods for system reliability using Bernoulli sampling of components
[AD-A104436] N82-11482

WISCONSIN UNIV., MADISON.
Magnets for the Tandem Mirror Fusion Power Reactor WITAMIR-I
[DE81-025566] N82-11954

WYOMING UNIV., LARAMIE.
Performance assessments of precipitation gages for snow measurement
[PB81-218547] N82-11443

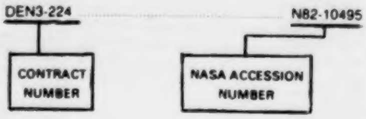
Y

YALE UNIV., NEW HAVEN, CONN.
Large gain, negative resistance, and oscillations in superconducting quasiparticle heterodyne mixers
[AD-A104534] N82-11361

[illegible]

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

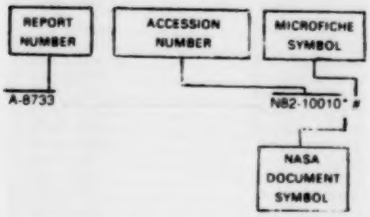
REPORT/ACCESSION NUMBER INDEX

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P. O. Box 8757, B. W. I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C., 20402, United States of America.

Semimonthly issues:

Annual subscription rates: $90.00 domestic; $112.00 foreign. Price per single copy: $4.75 domestic; $5.95 foreign.

Annual index issues:

Pricing based upon pagination.

Domestic subscription rates:

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates:

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH

Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 31, 1982.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR* and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P. O. Box 8757, B. W. I. Airport, Maryland 21240.

HOW TO USE STAR SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

> **AERONAUTICS**
>
> Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).
>
> For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

> **02 AERODYNAMICS**
>
> Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.
>
> For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche[1] are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 (**$6.00 domestic; $12.00 foreign**). Microfiche are sold at price code A01 (**$4.00 domestic; $8.00 foreign**). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;

2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF STAR ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America, $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 20 NUMBER 3/FEBRUARY 8, 1982

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) N.A.

02 AERODYNAMICS 287

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

03 AIR TRANSPORTATION AND SAFETY 291

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 292

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 293

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION 294

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER 294

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power*, *28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL 295

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 295

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*.

12 ASTRONAUTICS (GENERAL) 296

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS N.A.

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 297

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES 298

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 299

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATIONS, COMMAND AND TRACKING N.A.

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 299

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION N.A.

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER 303

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 303

Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 303

Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 305

Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics*.

26 METALLIC MATERIALS 313

Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 316

Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 317

Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power*, and *44 Energy Production and Conversion*.

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics*.

31 ENGINEERING (GENERAL) 322

Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 325

Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking*.

33 ELECTRONICS AND ELECTRICAL ENGINEERING 331

Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuitry.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics*.

34 FLUID MECHANICS AND HEAT TRANSFER 337

Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics*.

35 INSTRUMENTATION AND PHOTOGRAPHY 344

Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources*. For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation*.

36 LASERS AND MASERS 345

Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 347

Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 350

Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 350

Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance*.

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics, meteorology and climatology; and oceanography.

For related information see also *Space Sciences*.

42 GEOSCIENCES (GENERAL) 353

43 EARTH RESOURCES 354

Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 360

Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 374

Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 378

Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 383

Includes weather forecasting and modification.

48 OCEANOGRAPHY 385

Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes life sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) 386

Includes genetics.

52 AEROSPACE MEDICINE 387

Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES 390

Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT 392

Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY N.A.

Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) N.A.

60 COMPUTER OPERATIONS AND HARDWARE 393

Includes computer graphics and data processing.

For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE 396

Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS 399

Includes computer networks.

63 CYBERNETICS 400

Includes feedback and control theory.

For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS 400

Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY 403

Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS 406

Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS 406

Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.

For related information see also *Engineering.*

70 PHYSICS (GENERAL) 406

For geophysics see *46 Geophysics.* For astrophysics see *90 Astrophysics.* For solar physics see *92 Solar Physics.*

71 ACOUSTICS 408
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution.*

72 ATOMIC AND MOLECULAR PHYSICS 408
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS 410
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation.*

74 OPTICS 412
Includes light phenomena.

75 PLASMA PHYSICS 414
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics.* For space plasmas see *90 Astrophysics.*

76 SOLID-STATE PHYSICS 416
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers.*

77 THERMODYNAMICS AND STATISTICAL PHYSICS 420
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer.*

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) N.A.
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT 421
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE 421
Includes information storage and retrieval technology; micrography; and library science.
For computer documentation see *61 Computer Programming and Software.*

83 ECONOMICS AND COST ANALYSIS 424
Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE 424
Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION 424
Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.
For related information see *03 Air Transportation and Safety, 16 Space Transportation,* and *44 Energy Production and Conversion.*

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.
For related information see also *Geosciences.*

88 SPACE SCIENCES (GENERAL) N.A.

89 ASTRONOMY 425
Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS 426
Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION 427
Includes planetology; and manned and unmanned flights.
For spacecraft design see *18 Spacecraft Design, Testing and Performance.* For space stations see *15 Launch Vehicles and Space Vehicles.*

92 SOLAR PHYSICS 428
Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION 428
Includes cosmic radiation; and inner and outer earth's radiation belts.
For biological effects of radiation see *52 Aerospace Medicine.* For theory see *73 Nuclear and High-Energy Physics.*

DEVELOPMENT AND EVALUATION OF AUTOMATIC LANDING CONTROL LAWS FOR LIGHT WING LOADING STOL AIRCRAFT

B. Feinreich, O. Degani, and G. Gevaert Jul. 1981 371 p refs

(Contract NAS2-9410)

(NASA-CR-166160) Avail: NTIS HC A16/MF A01 CSCL 01C

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter. This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control. Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC. The spoilers produced a significant improvement in performance. A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations. A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed. Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration. Good landing performance, compatible with Category 3 operation into STOL runways, was obtained. Author

LOW-SPEED MEASUREMENTS OF THE STATIC PRESSURE DISTRIBUTION AND OVERALL FORCES ON A CAMBERED AND A SYMMETRIC MILD GOTHIC WING OF ASPECT RATIO 1.4
P. J. Butterworth and D. G. Dobney May 1980 86 p refs
(RAE-TR-80066; BR75504) Copyright. Avail: Issuing Activity

A cambered wing of aspect of ratio 1.4 was tested in a low speed wind tunnel to determine its surface static pressure distribution at its designed, attached-flow incidence for comparison with the theoretical loading. In order to enable the effects of camber on the separated-flow characteristics of this planform to be isolated, the corresponding symmetric wing was also included in the test program and the results for the two wings are compared and empirical relationships found. The lift, drag, and pitching moment characteristics of each wing were measured over a range of Reynolds number for comparison with the results of the earlier force tests and those derived by integration of the measured pressure distributions. WAKE BOUNDARY LAYER INTERACTION IN TURBOMACHINERY Ph.D. Thesis
Satya Pal 1981 314 p
Avail: Univ. Microfilms Order No. 8120764

The wake developed from the trailing edge of a thin and smooth flat plate including the effect of free stream turbulence was studied analytically as well experimentally. The experimental measurements were taken in a low speed wind tunnel using crosswire anemometry for three levels of free stream turbulence. Experimental results are presented on mean velocity profile, wake center line velocity, half with width, displacement thickness, momentum thickness, energy thickness, shape factor, components of turbulence intensity increases the wake recovery and growth rates. The analytical investigation also lead to the establishment of two turbulence parameters. These parameters simulate the effect of free stream turbulence on the wake velocity and length scales. Free stream turbulence increases the turbulence intensity and Reynolds stress in the wake. Correlations are developed to predict the decay behavior of turbulence quantities. These correlations depend upon the trailing edge conditions, free stream turbulence level, drag coefficient and distance downstream from the trailing edge. A self-preservation of wake has been taken as the basic for obtaining the correlations for turbulence quantities. Dissert. Abstr.

UNSTEADY BOUNDARY LAYER SEPARATION Ph.D. Thesis
Leonard Louis vanDommelen 1981 261 p
Avail: Univ. Microfilms Order No. 8119518

Some clarity is brought into the subject of boundary layer separation. In particular it is shown that the boundary layer about the impulsively started circular cylinder starts to separate from the surface after about .75 diameter movement. This is achieved by numerical integration of the initial value problem and independently by matched asymptotic expansion of the solution. Other results include a viscous-inviscid interaction solution for upstream slipping separation, a proposal for downstream slipping separation, derivation of the most general form of the semi-similar solutions, the physics behind the boundary layer singularities of Banks and Zaturska and Bodonyi and Stewartson, and the Kelvin-Helmholtz instability mechanisms of rapidly expanding vortex sheets. Dissert. Abstr.

THE NUMERICAL SOLUTION OF INCOMPRESSIBLE TURBULENT FLOW OVER AIRFOILS Ph.D. Thesis
Harwood Allan Hegna 1981 168 p
Avail: Univ. Microfilms Order No. 8119139

An algebraic eddy viscosity turbulence model based on Prandtl's mixing length theory was modified for separated adverse pressure gradient flows. Finite difference methods for solving the inviscid stream function equation and the incompressible laminar Navier-Stokes equations were used. A finite difference method for solving the Reynolds averaged incompressible turbulent two-dimensional Navier-Stokes equations were employed. Solutions for a NACA 0012 airfoil at angles of attack varying from five to 11.5 degrees at a chord Reynolds number of 170,000 were obtained. Velocity profiles near the airfoil surface and surface pressure distributions are presented and compared with experimental data. Lift and drag coefficients agree well with experimental values. Dissert. Abstr.

SUBCRITICAL AND SUPERCRITICAL AIRFOILS FOR GIVEN PRESSURE DISTRIBUTION Ph.D. Thesis
Ahmed Abdelatif HassanEissa 1981 82 p
Avail: Univ. Microfilms Order No. 8121930

An effective method, based on hodograph theory, was developed for the aerodynamic design of subcritical and shock-free supercritical airfoil sections. In addition to the free-stream conditions, the input to the design procedure includes a prescription of the subsonic part of a target pressure distribution and, for supercritical airfoils, of a presumed stream function on the sonic line. A computer program carries out a number of

sequential steps that result in an airfoil with a pressure distribution close to that desired at little computational cost. Thus, the airfoil designer can alter the input if design goals are not met and quickly produce another candidate airfoil. This is aided by appropriate graphic display of the airfoil and its pressure distribution.

AN EXPERIMENTAL STUDY OF A TURBULENT VORTEX RING Ph.D. Thesis

Ari Glezer 1981 120 p
Avail: Univ. Microfilms Order No. 8121060

An apparatus was constructed to study the formation and dynamics of vortex rings. The rings were formed in water by a momentary jet discharge downward into a glass tank from an orifice in a submerged plate. The necessary impulse was provided by a pressurized reservoir and is controlled by a fast programmable solenoid valve. A particular turbulent vortex ring with a relatively thin core was chosen for detailed study. The velocity field of this ring was measured at numerous locations in the tank, using a two-channel laser-Doppler velocimeter with digital tracking electronics. Beam splitting and frequency shifting were accomplished by two partially-overlapping radial phase gratings driven by hysteresis-synchronous motors. The aim was to verify the similarity properties of the turbulent vortex ring and to determine mean particle paths and mean vorticity contours in the appropriate non-steady similarity coordinates $x/(1/4),r/t(1/4)$. Some novel pattern-recognition techniques were developed to overcome the problem of dispersion in the trajectories of individual vortices.

THE COHERENT STRUCTURE OF TURBULENT MIXING LAYERS. 1: SIMILARITY OF THE PRIMARY VORTEX STRUCUTURE. 2: SECONDARY STREAMWISE VORTEX STRUCTURE Ph.D. Thesis

Luis Paulino Bernal 1981 106 p
Avail: Univ. Microfilms Order No. 8121056

The primary spanwise organized vortex structure and the secondary streamwise vortex structure of turbulent mixing layers were investigated. Flow visualization motion pictures of a constant density mixing layer were used to measure the properties of the large scale vortices. It was found that after an initial transition region mean of the large scale vortices reach the expected linear growth with downstream distance required by similarity. In the self-similar region, the vortex core area and visual thickness increase continuously during its life-span. A theoretical model of probability distribution function for the large-scale vortex circulation was developed. From this model the mean life-span of the vortices could also be obtained. The streamwise streak pattern observed in plan-view pictures of the mixing layer was investigated, using flow visualization and spanwise concentration measurements. It was confirmed that this pattern is the result of a secondary vortex structure dominated by streamwise, counter-rotating vortices. A detailed description of its spatial relation to the primary, spanwise vortex structure is presented.

AERODYNAMIC MEASUREMENTS CONCERNED WITH A TURRET MODEL

K. R. Raman May 1981 44 p refs
(Contract NAS2-10579)
(NASA-CR-166264) Avail: NTIS HC A03/MF A01 CSCL 01A

An experimental investigation was carried out in the 14 by 14 ft Ames transonic wind tunnel on a turret model. The aerodynamic parameters measured were steady and unsteady pressures (static and total fluid pressures), local mean velocities, and local mean densities at selected locations along the optical beam path for the azimuth look angles of 90, 120, and 150 degrees from the turret. The test stream Mach numbers considered are 0.55, 0.65 and 0.75, and the Reynolds number per meter is in the range of 10 million. The results indicate that severe optical degradation can be expected at aft look azimuth, angles, this degradation in optical performance increases as the azimuth angle is increased. The ratio of rms static pressure to the local mean static pressure peaks in the range of 0.07 to 0.12 and the ratio of rms total pressure to the local mean total pressure peaks in the range of 0.02 to 0.04. These values depend on the Mach number and the aft look azimuth angle. The scale lengths obtained from correlation considerations are also presented.

DESCRIPTION AND CALIBRATION OF THE LANGLEY UNITARY PLAN WIND TUNNEL

Charlie M. Jackson, Jr., William A. Corlett, and William J. Monta Nov. 1981 104 p refs
(NASA-TP-1905; L-14024) Avail: NTIS HC A06/MF A01 CSCL 01A

The two test sections of the Langley Unitary Plan Wind Tunnel were calibrated over the operating Mach number range from 1.47 to 4.63. The results of the calibration are presented along with a a description of the facility and its operational capability. The calibrations include Mach number and flow angularity distributions in both test sections at selected Mach numbers and tunnel stagnation pressures. Calibration data are also presented on turbulence, test-section boundary layer characteristics, moisture effects, blockage, and stagnation-temperature distributions. The facility is described in detail including dimensions and capacities where appropriate, and example of special test capabilities are presented. The operating parameters are fully defined and the power consumption characteristics are discussed.

A PULSE-FORMING NETWORK FOR PARTICLE PATH VISUALIZATION

Kenneth W. McAlister Nov. 1981 18 p refs Prepared in cooperation with Army Research and Technology Labs., Moffett Field, Calif.
(NASA-TM-81311; A-8671; AVRADCOM-TR-81-A-21) Avail: NTIS HC A02/MF A01 CSCL 01A

A procedure is described for visualizing nonsteady fluid flow patterns over a wide velocity range using discrete nonluminous particles. The paramount element responsible for this capability is a pulse-forming network with variable inductance that is used to modulate the discharge of a fixed amount of electrical energy through a xenon flashtube. The selectable duration of the resultant light emission functions as a variable shutter so that particle path images of constant length can be recorded. The particles employed as flow markers are hydrogen bubbles that are generated by electrolysis in a water tunnel. Data are presented which document the characteristics of the electrical circuit and establish the relation of particle velocity to both section inductance and film exposure.

WIND-TUNNEL INVESTIGATION OF THE SIDE-FORCE OF RECTANGULAR WINGLETS ON THE TIP OF A RECTANGULAR WING

Naoto Takizawa, Nagakatsu Kawahata, Noriaki Okada, and Akihito Iwasaki 1981 39 p refs Partly in JAPANESE; partly in ENGLISH
(NAL-TR-669; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

Wind tunnel tests were conducted on a rectangular wind of aspect ratio 6 with a NACA0012 section to investigate side-force characteristics of a vertical rectangular winglet A or B mounted on the left wing tip. Winglet A has 1/10 the area of the wing. Winglet B has half the span of A. The installation angle of the winglets to the wind chord was variable up to 20 and the angle of the 1/3-chord flap up to 30 deg. Low speed data were obtained over angles of attack of approximately 15 deg and at angles of sideslip of 0 deg to 10 deg. The results indicate that winglets produce favorable side-force characteristics applicable to direct side-force control devices of aircraft in landing approaches particularly in cross-wind landings. In order to check the results, a simple formula is proposed to calculate the induced side-force of a winglet by the lift of the main wing on the basis of the lifting line theory. It is shown from the results that the differences of side-forces between upper left and low right winglets of between normal and some variant winglets depend on the sign of pressure over the wing, the winglet, and the plate on the top of the winglet. J.M.S.

TRANSONIC AIRFOIL DESIGN OF FULL POTENTIAL FLOW. 1: NUMERICAL PROCEDURE AND ITS COMPUTATIONAL EXAMPLES

Tomiko Ishiguro, Nobuhiko Kamiya, and Nobuhiro Kawai 1981 46 p refs In JAPANESE; ENGLISH summary
(NAL-TR-672; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

A computational inverse procedure for transonic airfoils, in which geometries are determined from prescribed target pressure distributions, is presented. This is an interactivé direct-inverse approach. The following two calculations are iterated until a target pressure distribution coincides with a direct solution on a temporary surface. One is the direct solution, which is calculated using the successive line over-relaxation method which solves the full inviscid compressible potential flow equation in the Neuman problem. The other is a modification of the temporary airfoil geometry, which is determined from the conservation law of mass flux using the normal velocity at the contour, which is obtained by solving the equation in the Dirichlet problem where the target pressure distribution is specified at the temporary contour. Futhermore, a boudary layer calculation is made and a displacement thickness is substracted to yield an actual airfoil geometry. Several examples illustrating this method are presented for flows with and without shock waves. Author

A VORTEX-FILAMENT AND CORE MODEL FOR WINGS WITH EDGE VORTEX SEPARATION

Jenn-Louh Pao and C. Edward Lan Nov. 1981 132 p refs
(Contract NCC1-18)
(NASA-CR-164980; CRINC-FRL-424-1) Avail: NTIS HC A07/MF A01 CSCL 01A

A method for predicting aerodynamic characteristics of slender wings with edge vortex separation was developed. Semiempirical but simple methods were used to determine the initial positions of the free sheet and vortex core. Comparison with available data indicates that: the present method is generally accurate in predicting the lift and induced drag coefficients but the predicted pitching moment is too positive; the spanwise lifting pressure distributions estimated by the one vortex core solution of the present method are significantly better than the results of Mehrotra's method relative to the pressure peak values for the flat delta; the two vortex core system applied to the double delta and strake wing produce overall aerodynamic characteristics which have good agreement with data except for the pitching moment; and the computer time for the present method is about two thirds of that of Mehrotra's method. PERFORMANCE AND LOADS DATA FROM A WIND TUNNEL TEST OF A FULL-SCALE, COAXIAL, HINGELESS ROTOR HELICOPTER

Fort F. Felker, III Oct. 1981 350 p Prepared in cooperation with Army Aviation Research and Development Command, Moffett Field, Calif.
(NASA-TM-81329; A-8732; USAAVRADCOM-TR-81-A-27) Avail: NTIS HC A15/MF A01 CSCL 01A

A full-scale XH-59A advancing blade concept helicopter was tested in Ames Research Center's 40 by 80 foot wind tunnel. The helicopter was tested with the rotor on and off, rotor hub fairings on and off, interrotor shaft fairing on and off, rotor instrumentation module on and off, and auxiliary propulsion thrust on and off. An advance ratio range of 0.25 and 0.45 with the rotor on and from 60 to 180 knots with the rotor off was investigated. Data on aerodynamic forces and moments, rotor loads, rotor control positions and viration for the XH-59A as well as the aerodynamic performance of the isolated rotor are presented. S.L.

AEROELASTICITY MATTERS: SOME REFLECTIONS ON TWO DECADES OF TESTING IN THE NASA LANGLEY TRANSONIC DYNAMICS TUNNEL

Wilmer H. Reed, III Sep. 1981 19 p refs Presented at the Intern. Symp. on Aeroelasticity, Nuremberg, West Germany, 5-7 Oct. 1980 - 1 Oct. 1981
(NASA-TM-83210) Avail: NTIS HC A02/MF A01 CSCL 01A

Testing of wind-tunnel aeroelastic models is a well established, widely used means of studying flutter trends, validating theory and investigating flutter margins of safety of new vehicle designs. The Langley Transonic Dynamics Tunnel was designed specifically for work on dynamics and aeroelastic problems of aircraft and space vehicles. A cross section of aeroelastic research and testing in the facility since it became operational more than two decades ago is presented. Examples selected from a large store of experience illustrate the nature and purpose of some major areas of work performed in the tunnel. These areas include: specialized experimental techniques; development testing of new aircraft and launch vehicle designs; evaluation of proposed 'fixes' to solve aeroelastic problems uncovered during development testing; study of unexpected aeroelastic phenomena (i.e., 'surprises'); control of aeroelastic effects by active and passive means; and, finally, fundamental research involving measurement of unsteady pressures on oscillating wings and control surface. EXPERIMENTAL AND ANALYTICAL STUDIES OF A MODEL HELICOPTER ROTOR IN HOVER

F. X. Caradonna and C. Tung Sep. 1981 61 p refs Presented at the 6th European Rotorcraft and Powered Lift Aircraft Forum, Bristol, England, 16-19 Sep. 1980 Prepared jointly with Army Aviation Research and Development Command
(NASA-TM-81232; A-8332; USAAVRADCOM-TR-81-A-23) Avail: NTIS HC A04/MF A01 CSCL 01A

A benchmark test to aid the development of various rotor performance codes was conducted. Simultaneous blade pressure measurements and tip vortex surveys were made for a wide range of tip Mach numbers including the transonic flow regime. The measured tip vortex strength and geometry permit effective blade loading predictions when used as input to a prescribed wake lifting surface code. It is also shown that with proper inflow and boundary layer modeling, the supercritical flow regime can be accurately predicted. J.M.S.

INTERACTION OF UPSTREAM FLOW DISTORTIONS WITH HIGH MACH NUMBER CASCADES

Gerald W. Englert 1981 21 p refs Proposed for presentation at the 27th Ann. Gas Turbine Conf., London, 18-22 Apr. 1982; sponsored by ASME
(NASA-TM-82759; E-1078) Avail: NTIS HC A02/MF A01 CSCL 01A

Features of the interaction of flow distortions, such as gusts and wakes with blade rows of advance type fans and compressors having high tip Mach numbers are modeled. A typical disturbance was assumed to have harmonic time dependence and was described, at a far upstream location, in three orthogonal spatial coordinates by a double Fourier series. It was convected at supersonic relative to a linear cascade described as an unrolled annulus. Conditions were selected so that the component of this velocity parallel to the axis of the turbomachine was subsonic, permitting interaction between blades through the upstream as well as downstream flow media. A strong, nearly normal shock was considered in the blade passages which was allowed curvature and displacement. The flows before and after the shock were linearized relative to uniform mean velocities in their respective regions. Solution of the descriptive equations was by adaption of the Wiener-Hopf technique, enabling a determination of distortion patterns through and downstream of the cascade as well as pressure distributions on the blade and surfaces. Details of interaction of the disturbance with the in-passage shock were discussed. Infuences of amplitude, wave length, and phase of the disturbance on lifts and moments of cascade configurations are presented. Numerical results are clarified by reference to an especially orderly pattern of upstream vertical motion in relation to the cascade parameters. R.J.F.

A SYMPOSIUM ON TRANSONIC FLOW RESEARCH

David Nixon Sep. 1981 25 p refs Symp. held at Amer. Res. Center, 19-20 Feb. 1981
(Contract N00017-80-C-0803)
(AD-A104871; NEAR-TR-255) Avail: NTIS HC A02/MF A01 CSCL 20/4

This report documents the organization and operation of the 'Transonic Perspective' conference held at NASA/Ames Research Center, February 19-20, 1981. After a period of decline in the 1960's transonic flow research has made rapid progress in the last decade. This is partly due to a renewed interest in the transonic regime for both military and civil aircraft and partly to the availability of large computers, which gave considerable impetus to the development of numerical prediction methods for realistic flows. However, not all the significant research of the decade is in the field of predictive methods; other topics such as experimental techniques for unsteady transonic flows and the super-critical wind technology, are also of importance. Much of the work in the various sub-topics of transonic flow research is done by small groups and sometimes these groups operate in relative isolation to other work in other topics. It is suggested, sometimes, that research workers concentrate on their own speciality so much that they consider their achievements as ends in themselves, rather than relating their results to the dominant problem of understanding and prediction of real, practical, transonic flow problems. A SOURCE-DOUBLET APPROACH TO MODELING TRIPLE EJECTOR RACK STORE CONFIGURATIONS AND FORCE CALCULATIONS Final Report, Feb. 1979 - Jul. 1980

Calvin L. Dyer and Charles B. Heath Jul. 1981 95 p refs
(AF Proj. 2403)
(AD-A105427; AFWAL-TR-81-3059) Avail: NTIS HC A05/MF A01 CSCL 20/4

The method presented in this report extends the FDL Subsonic Store Separation Program to include the aerodynamic modeling of the separating store as well as adjacent stores and the ejector rack. In the work presented in AFFDL-TR-74-130 only the volume effects of the stores and ejector rack are accounted for and Slender Body theory is used to calculate forces and moments on the separating store. In this report, doublets are used to model the upwash and sidewash of adjacent stores and the ejector rack. The induced flow-field portion of the total aircraft flow-field is included in the boundary conditions. Once the non-uniform flow-field has been modeled, three-dimensional point sources and doublets along the separating store axis are used to calculate loadings. Store loadings using Slender Body theory and the Source-Doublet method are compared to wind tunnel data. It is hoped that this method might offer a viable alternative to a complete mutual interference solution such as a paneling approach. Author (GRA)

EVALUATION AND WIND TUNNEL TESTS OF THE 4,000 LB (NORMAL-FORCE) PITCH/YAW AND ROLL DYNAMIC STABILITY BALANCE SYSTEMS FOR MEASURING DIRECT, CROSS, AND CROSS-COUPLING DERIVATIVES Final Report, 5 Jun. 1978 - 25 May 1979

T. D. Buchanan, S. M. Coulter, and E. J. Marquart Sep. 1981 79 p refs
(AD-A105122; AEDC-TR-80-12) Avail: NTIS HC A05/MF A01 CSCL 20/4

Early in the 1970's, the personnel at the Arnold Engineering Development Center (AEDC) recognized the need for a set of new dynamic test mechanisms for testing aircraft models at high angles of attack. At these angles of attack cross and cross-coupling derivatives may be significant in determining the aircraft's stability. Dynamic balances were fabricated to perform pitch, yaw, and roll dynamic stability tests of aircraft or large missile models at AEDC. The balances were designed to measure not only the direct derivatives but also cross and cross-coupling derivatives. The set of balances comprises a 4,000-lb (normal-force) roll and a 4,000-lb pitch/yaw forced-oscillation balance to measure the direct damping derivatives and a five-component can-type balance to measure the cross and cross-coupling derivatives attributable to pitch or yaw. Extensive laboratory investigations of the balances' static and dynamic response characteristics were performed before wind tunnel tests of a 1/9-scale F-16A model in the AEDC Propulsion Wind Tunnel (16T) at Mach numbers from 0.2 to 1.4. ON VORTEX BREAKDOWN AND INSTABILITY Final Technical Report, 16 May - 25 Jul. 1980

Shiva N. Singh and Wilbur L. Hankey Wright-Patterson AFB, Ohio AFWAL Mar. 1981 32 p refs
(Contract F49620-79-C-0038; AF Proj. 2307)
(AD-A104980; AFWAL-TR-81-3021) Avail: NTIS HC A03/MF A01 CSCL 20/4

A literature survey on the vortex breakdown phenomenon is presented. Several theoretical and numerical models which have been proposed and applied to explain the experimental observations concerning vortex bursting are reviewed. Required parameters to perform the related stability analysis have been identified. Appropriate criteria where possible are cited to assist engineers in estimating occurrence of vortex bursting. A numerical scheme to compute and verify some of the results for incompressible inviscid unstable modes is programmed on the computer at WPAFB. It is suggested that the influence of adverse pressure gradient on the vortex breakdown be investigated in detail and results thus obtained be compared with experiments under appropriate conditions. CALCULATION OF STATIONARY TRANSONIC FLOWS USING THE INTEGRAL EQUATION METHOD Final Report [INTEGRALGLEICHUNGSVERFAHREN FUER STATIONAERE TRANSSONISCHE STROEMUNGEN]

R. Voss Jan. 1979 50 p refs In GERMAN
(Contract DFG-IS-10/27)
(Rept-374) Avail: NTIS HC A03/MF A01

The suitability of the integral equation method for solving complex transonic flow problems is examined. In order to take into account compression shocks occurring in transonic rotor flows, it is necessary to formulate the integral flow equations so that the contribution of the shock emerges explicitly, rendering these equations substantially more complex. The method was developed, taking as examples plane potential flow and the homogeneous stream along an airfoil. In spite of the complexity of the method, a rough approximation of the solution is obtained, serving as a starting point for a numerical difference method and representing a considerable saving of time for this computer intensive difference method. APPLICATION OF SINGULAR PERTUBATION THEORY TO ONBOARD AIRCRAFT TRAJECTORY OPTIMIZATION Ph.D Thesis
Abhijit J. M. Chakravarty 1981 139 p
Avail: Univ. Microfilms Order No. 8121183

The problem of minimizing direct operating cost in dollars (combined cost per hour and cost of fuel per hour) for a typical commercial jet transport model is formulated via the Pontryagin minimum principle. Singular perturbation theory is applied to reduce the computational burden of solving the resulting optimal control problem. The work of previous investigators is extended to include the aircraft weight variation in the state equations and the resulting seven-state model is analyzed for time scale separation. It is shown that a realistic time scale separation involves only two scales. The resulting model is then used to develop the inner and outer solutions as dictated by singular perturbation theory. Both the free terminal time problem and the time controlled 4-D problem are considered. A comprehensive model for the aerodynamic and fuel flow terms appearing in the equations is developed for use in optimal trajectory computation. Numerical results are presented that illustrate the nature of the optimal trajectory and the control variables. Dissert. Abstr.

TRANSPORTATION SYSTEMS EVALUATION METHODOLOGY DEVELOPMENT AND APPLICATIONS, PHASE 3 Final Report
A. Robert Kuhlthau, I. D. Jacobson, and L. C. Richards Jun. 1981 82 p
(Contract NAS1-14908)
(NASA-CR-164999; UVA/528175/MAE-CE81/101) Avail: NTIS HC A05/MF A01 CSCL 01B

Transportation systems or proposed changes in current systems are evaluated. Four principal evaluation criteria are incorporated in the process, operating performance characteristics as viewed by potential users, decisions based on the perceived impacts of the system, estimating what is required to reduce the system to practice; and predicting the ability of the concept to attract financial support. A series of matrix multiplications in which the various matrices represent evaluations in a logical sequence of the various discrete steps in a management decision process is used. One or more alternatives are compared with the current situation, and the result provides a numerical rating which determines the desirability of each alternative relative to the norm and to each other. The steps in the decision process are isolated so that contributions of each to the final result are readily analyzed. The ability to protect against bias on the part of the evaluators, and the fact that system parameters which are basically qualitative in nature can be easily included are advantageous. S.L.

INVESTIGATION OF SEVERE LIGHTNING STRIKE INCIDENTS TO TWO USAF F-106A AIRCRAFT
J. Anderson Plumer Hampton, Va. NASA. Langley Research Center Sep. 1981 19 p
(Contract NAS1-15884)
(NASA-CR-165794; LT-80-56) Avail: NTIS HC A02/MF A01 CSCL 01C

The results of the inspection and analysis of two F-106A aircraft that were struck by separate lightning strikes within a few minutes of each other are presented. Each aircraft sustained severe lightning strikes to the pitot booms, resulting in extensive damage to the pitot heater power harness, number 8 ground wire, and lightning suppressors, but there was no damage to either aircraft's electrical or avionic systems. A simulated lightning current of 226 kA and 3.8 million A(2)*S was required to reproduce the damage to the ground wires in the radomes. Photographs and detailed assessments of the damage are included. R.J.F.

AN ANALYSIS OF CIVIL AVIATION PROPELLER-TO-PERSON ACCIDENTS: 1965-1979
William E. Collins, Angelo R. Mastrullo, William R. Kirkham, Deborah K. Taylor, and Paula M. Grape May 1981 13 p refs
(AD-A105365; FAA-AM-81-15) Avail: NTIS HC A02/MF A01 CSCL 01/2

The interest of manufacturing, governmental, and safety personnel using paint schemes on propeller and rotor blades is based on improving the visual conspicuity of those blades when they are rotating. While propeller and rotor paint schemes may serve to reduce the number of fatalities and injuries due to contact with a rotating blade there is little information available regarding analyses of the circumstances surrounding such accidents. Brief reports provided by the National Transportation Safety Board of all 'propeller-to-person' accidents from 1965 through 1979 were examined and analyzed in terms of airport lighting conditions, actions of pilots, actions of passengers and ground crew, phase of flight operation, weather conditions, and others. Analyses based on a total of 319 accidents showed a marked drop in the frequency of 'propeller-to-person' accidents from 1975 through 1978. Several types of educational efforts directed toward pilots and ground crew, both prior to and during that 4-year period, were examined as possible factors contributing to the accident rate decline. Accident patterns provide a basis for assessing the probable efficacy of various recommendations (including propeller conspicuity) for further reducing 'propeller-to-person' accidents. Author (GRA)

SUMMARY OF FEDERAL AVIATION ADMINISTRATION RESPONSES TO NATIONAL TRANSPORTATION SAFETY BOARD SAFETY RECOMMENDATIONS Quarterly Report, Jan. - Mar. 1981
R. E. Livingston and C. A. Carpenter Apr. 1981 243 p refs
(AD-A104922; FAA-ASF-81-3) Avail: NTIS HC A11/MF A01 CSCL 01/2

This report contains NTSB recommendations and all FAA responses to Board recommendations that were delivered to the Board during the applicable quarter. In addition, the report includes NTSB requests and FAA responses concerning reconsiderations, status reports, and followup actions. The Table of Contents for this report reflects only those NTSB recommendations which are still open pending FAA action (i.e., those that have not been designated as 'Closed' by the NTSB as a result of acceptable action). Accordingly, the Table of Contents may reflect a number of multiple recommendations (example: A-79-21 through 24), but background material is included only for those recommendations which remain in an 'Open' status. Background information for those recommendations which have been closed is available in FAA Headquarters files. Author (GRA)

INVESTIGATION OF THE STRUCTURAL DEGRADATION AND PERSONNEL HAZARDS RESULTING FROM HELICOPTER COMPOSITE STRUCTURES EXPOSED TO FIRES AND/OR EXPLOSIONS Final Report, Mar. 1979 - Dec. 1980
Raymond J. Schiltz, Jr. Aug. 1981 111 p refs
(Contract DAAK51-79-C-0009; DA Proj. 1L1-62209-AH-76)
(AD-A104757; USAAVRADCOM-TR-81-D-16) Avail: NTIS HC A06/MF A01 CSCL 13/12

A program was undertaken to investigate the structural degradation and personnel hazards resulting from exposure of helicopter composite structures to fire and/or explosion. The program consisted of a technical survey, a test program, and an analysis phase. A major part of the technical survey was a literature survey. In addition, organizations working in the fields of interest were contacted for information, and some were visited for further, detailed discussions. The computer programs currently available for modeling enclosure fires were screened, and one was chosen for further study. The test program consisted of a series of tests on two representative helicopter structures: a sheet-stiffened, built-up door of Kevlar 49 fabric impregnated with an epoxy resin, and a honeycomb sandwich fuselage shell structure of graphite/epoxy fabric skins on a Nomex honeycomb core. The tests conducted on materials from these structures were smoke generation tests, and structural degradation tests. Ballistic tests on the complete test article were conducted to determine whether the structures would ignite under HEI impact conditions. Based on the survey and testing, design criteria for structural composite components were investigated and, when appropriate, formulated. Author (GRA)

STUDY ON STRAPDOWN INERTIAL NAVIGATION REDUNDANT SENSOR SYSTEM
Hirokimi Shingu 1981 26 p refs In JAPANESE; ENGLISH summary
(NAL-TR-660; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

An efficient method of increasing the reliability of a strapdown inertial navigator by use of a redundant sensor is described along with a preliminary technique to detect and isolate the sensor failures, and how to determine the tolerance limits of the detection delay. The reliability and the accuracy of various redundant systems using four five and six-sensor are analyzed. It is found that models of nonorthogonal orientation have higher reliability than those of orthogonal orientation using the same number of sensors. If the sensor arrays are optimum, the improvement of accuracy was found to be 13.4%, 22.5%, and 29.3% for four five and six-sensor systems in comparison with conventional three-sensor arrays when all sensors are operating normally. A trail to detect a sensor failure and to find a way to compensate for performance degradation of a system is done by using a set of parity equations. The system is a six-sensor array. The method is one of substituting the integrated values of the sensor data into those equations in order that the detection performance be better. The detection is evaluated as a quantitative relation to the navigational error on the assumption that a redundant system is employed for a mission. J.M.S.

FLIGHT EVALUATION OF LORAN-C AS A HELICOPTER NAVIGATION AID IN THE BALTIMORE CANYON OIL EXPLORATION AREA Final Report, Mar. - May 1979
William A. Lynn May 1981 43 p
(FAA Proj. 045-390-130)
(AD-A105260; FAA-CT-80-53; FAA-RD-81-27) Avail: NTIS HC A03/MF A01 CSCL 17/7

A series of flight tests were conducted to investigate the use of long range navigation (LORAN)-C as a helicopter navigation system in the offshore New Jersey Baltimore Canyon oil exploration area. Tests were flown aboard the Federal Aviation Adminstration (FAA) Technical Center's CH-53A using a Teledyne Systems TDL-711 LORAN Micro-Navigator. The purpose of the tests was to determine the accuracy and operational usability of LORAN-C for offshore en route navigation and nonprecision approaches. The total system accuracy met or exceeded the requirements of Advisory Circular (AC) 90-45A 'Accuracy Requirements of Area Navigation Systems' for terminal and en route phases of flight, provided the proper LORAN triads were selected.' The LORAN-C System did not meet AC 90-45A nonprecision approach accuracy criteria. Author (GRA)

THE USE OF GROUNDSPEED, IN A WIND SHEAR AND THE FLIGHT EVALUATION OF A RADAR-ALTIMETER-BASED SYSTEM FOR THE MEASUREMENT OF GROUNDSPEED Final Report, Jan. 1978 - Oct. 1980
David Lawrence Jul. 1981 44 p refs
(AD-A104758; FAA-CT-81-34; ACT-100F) Avail: NTIS HC A03/MF A01 CSCL 04/2

The use of groundspeed in combination with airspeed has been considered and shown to be an effective aid in the execution of an approach and landing in a heavy jet transport airplane. A flight dynamics analysis shows that the response of such aircraft to sudden changes in headwind is quite sluggish, requiring more than 100 seconds for equilibrium conditions to be regained in the worst case. A feasibility demonstration model of a radar-altimeter-based system for the measurement of groundspeed has been subjected to a limited in-flight evaluation. It is a self-contained unit requiring no ground-based equipment and no on-board equipment other than the small flush transmit and receive antennas and the associated cable runs. While the current unit does not meet the desired accuracy standard (delta = + or 3 knots, or less), it approaches it at times, and greater accuracy can be achieved with further development. Responsiveness to rapidly changing groundspeed matched that of the reference inertial navigation system; and satisfactory groundspeed tracking was maintained during turning, climbing, and descending flight. DESIGN STUDY REPORT FOR GENERAL AVIATION LORAN-C RECEIVER Final Report
H. L. Walker and R. Ellerbe May 1981 257 p
(Contract DT-FA01-80-C-10108)
(AD-A104921; FAA/RD-81/36) Avail: NTIS HC A12/MF A01 CSCL 17/7

This document summarizes the results of studies and trade-off

analysis conducted for a low cost Loran-C Receiver. The Loran-C Receiver is intended to meet the Minimum Operational Performance Standards for area Navigation (RNAV) equipment for General Aviation Aircraft operating in the National Aerospace System. The studies and analysis examined the required receiver performance, design approaches and design criteria, and cost to the user of the receiver. The study concludes that a low cost receiver meeting the General Aviation RNAV requirements is practical. A design approach for the receiver is described.

ORIENTING DESCRIPTION OF AIR TRAFFIC CONTROL IN THE NETHERLANDS [ORIENTERENDE BESCHRIJVING VAN DE LUCHTVERKEERSLEIDING IN NEDERLAND]
W. H. vanTuijl Aug. 1979 84 p refs In DUTCH
(VTH-LR-285) Avail: NTIS HC A05/MF A01

A general impression is given of air traffic control (ATC) in the Netherlands and of the signal automatic radar data processing (SARP) air traffic control system for Schiphol airport emphasizing safety and efficiency. Flight conditions, air structure, and navigation and landing aids of the ATL system are described. In the SARP system, data relative to position and flight plans are, on a real time basis, processed by a set of computers and distribued. Task sharing in SARP, its technical layout, its operational layout, operational functions and flight data are reviewed. Author (ESA)

THE EFFECT OF VISUAL INFORMATION ON MANUAL APPROACH AND LANDING
P. H. Wewerinke 28 Apr. 1980 20 p refs Presented at 16th Ann. Conf. on Manual Control, Cambridge, Mass., 5-7 May 1980 Abbreviated version of NLR-TR-80055-U
(NLR-MP-80019-U; NLR-TR-80055-U) Avail: NTIS HC A02/MF A01

The effect on approach performance of visual scene information, in combination with basic display information, is discussed for the manual approach and landing task. Good, poor, and night visibility conditions are considered, combined with basic head-up display configurations representing a variety of visual cues (runway contours, etc). A pre-experimental model analysis was performed in terms of an optimal control model. The resulting aircraft approach performance predictions were compared with the results of a moving base simulator program. The results illustrate that the model provides a meaningful description of the visual (scene) perception process involved in the complex (multivariable, time varying) manual approach task with a useful predictive capability. The theoretical framework is shown to allow a straight forward investigation of the complex interaction of a variety of task variables. Author (ESA)

EXPERIMENTAL AND ANALYTICAL STUDIES OF ADVANCED AIR CUSHION LANDING SYSTEMS Final Report
E. G. S. Lee, A. B. Boghani, K. M. Captain, H. J. Rutishauser, H. L. Farley, R. B. Fish, and R. L. Jeffcoat Washington NASA Nov. 1981 188 p refs
(Contract NAS1-15051)
(NASA-CR-3476) Avail: NTIS HC A09/MF A01 CSCL 01C

Several concepts are developed for air cushion landing systems (ACLS) which have the potential for improving performance characteristics (roll stiffness, heave damping, and trunk flutter), and reducing fabrication cost and complexity. After an initial screening, the following five concepts were evaluated in detail: damped trunk, filled trunk, compartmented trunk, segmented trunk, and roll feedback control. The evaluation was based on tests performed on scale models. An ACLS dynamic simulation developed earlier is updated so that it can be used to predict the performance of full-scale ACLS incorporating these refinements. The simulation was validated through scale-model tests. A full-scale ACLS based on the segmented trunk concept was fabricated and installed on the NASA ACLS test vehicle, where it is used to support advanced system development. A geometrically-scaled model (one third full scale) of the NASA test vehicle was fabricated and tested. This model, evaluated by means of a series of static and dynamic tests, is used to investigate scaling relationships between reduced and full-scale models. The analytical model developed earlier is applied to simulate both the one third scale and the full scale response. S.L.

ELECTRONIC MASTER MONITOR AND ADVISORY DISPLAY SYSTEM (EMMADS) Final Report, Jun. 1977 - Jun. 1981
Jun. 1981 38 p refs
(Contract DAAK80-79-C-0270; DA Proj. 1L2-62202-AH-85)
(AD-A105082; ACS-12386; USAAVRADCOM-TR-79-F-270)
Avail: NTIS HC A03/MF A01 CSCL 01/3

The design and fabrication of a programmable feasibility model of an electronic master monitor and advisory display system for helicoptrs is described. Functional requirements and system interfaces for signal analysis were determined for the helicopters studied. Human factors studies developed formats for reducing crew workloads and maximizing crew performance. Methods of data transfer from sensors to the monitor system were analyzed and appropriate interfaces and data transmission media were recommended. The programmable feasibility model is discussed.

(Contract F33615-79-C-3205; AF Proj. 2401)
(AD-A104775; AFWAL-TR-81-3017) Avail: NTIS HC A19/MF A01 CSCL 14/2

AFWAL/FIBG has a facility that provides dynamics data acquisition and analysis to support ground and flight testing on Air Force systems. This capability is limited by the current analog data acquisition technology to the acquisition of 12 data channels simultaneously of 40 to 50 dB dynamic range. This report documents a study conducted to obtain an optimum data acquisition and analysis system using PCM technology to provide simultaneous acquisition of 144 channels with 60 to 70 dB dynamic range. Implementation of this design will advance the state-of-the-art for acquisition of high bandwidth (20 KHz) dynamics data and will result in a significant reduction in the cost of flight tests. A VAPOUR CYCLE CABIN COOLING SYSTEM FOR THE SEA KING MK.50 HELICOPTER
Brian Rebbechi Feb. 1980 59 p refs
(AD-A105211; ARL/MECH-ENG-155; AR-001-793) Avail: NTIS HC A04/MF A01 CSCL 13/1

An experimental determination has been made of the design requirements for a cabin cooling system in the Sea King Mk. 50

helicopter. The purpose of this system is to bring the cabin environment in the helicopter to an acceptable level for effective crew performance. Cooling was provided by an experimental vapour cycle cooling system. Results of the trials have been used to formulate a heat transfer model of the cabin to enable prediction of required cooling capacity for extreme climatic conditions. A comparison, based on the trials results, is made between the performance attainable by a vapour cycle cooling system, and an air cycle system using the available engine bleed.

EFFECTS OF AERODYNAMIC COUPLING ON THE DYNAMICS OF ROLL AIRCRAFT
Gottfried Sachs and Werner Fohrer Jan. 1981 48 p refs In GERMAN; ENGLISH summary
Avail: NTIS HC A03/MF A01

The effects of coupling of longitudinal and lateral aerodynamic characteristics on the dynamics of aircraft roll were studied, using simplified relations and complete six-degree of freedom calculations. The aerodynamic coupling is caused by unsymmetric flow conditions resulting from sideslipping, where rolling moments due to angle of attack and pitching moments due to angle of sideslip, are of particular significance for the problem. It is shown that the attainable rate of roll is significantly influenced and that marked effects on stability are possible. Furthermore, it is shown that aerodynamic coupling can cause autorotation, i.e., a rolling motion without aileron forcing moments. Author (ESA)

MATHEMATICAL MODELS AND DIGITAL SIMULATION OF HYDRAULIC CONSTANT SPEED DRIVE UNITS FOR AIRCRAFT ELECTRICAL SUPPLY SYSTEMS, VOLUME 1
L. Tsitsilonis and D. McLean Aug. 1981 180 p refs
(Contract Min-DEF/ERC/9/4/2170/074XR/EP)
(TT-8102-Vol-1) Avail: NTIS HC A09/MF A01

A mathematical model which represents the dynamic behavior of hydraulic constant speed drive units (CSDU) is presented. The model forms the basis of a complete digital simulation program, written in the ICL Continuous System Simulation Language (CSSL) called SLAM. The CSDU's used are sunstrand AE 8906 and AE 8050. Dynamic responses, obtained from AE 8050, are compared with similar responses obtained from digital simulation studies in order to validate the model. A number of suggestions are also presented for future application and extension of the mathematical model and the corresponding simulation. These include the use of electronic governing and the possible use of a CSDU as a starter generator.

INSTRUMENT FAILURE DETECTION FOR A LINEAR UNCERTAIN SYSTEM Ph.D. Thesis
Wen-Kuang Chen 1981 225 p
Avail: Univ. Microfilms Order No. 8121186

Software redundancy techniques were applied to detect the identify instrument failures for a system modeled by a set of linear uncertain dynamic equations. Classical and geometric approaches were employed to specify a condition on the structure of the system and the uncertainties in order to design a dedicated observer scheme (DOS). The DOS detects and identifies instrument failure for a linear uncertain system. In the observable subspace, a special direction called zero sensitive direction is found. In this direction, the observer is insensitive to system uncertainties and it will observe a linear combination of the state variables for a linear uncertain system unless the observer is driven by a faulty instrument. The geometric approach shows how to design the observer (to find the observer gain vector) and what the zero sensitive direction should be (to find a matrix representing that direction). This employs mapping theory of linear algebra rather than solving equations and inequalities. A cart-motor-inverted pendulum system is taken as an example, in which the length of the pendulum is assumed uncertain. Dissert. Abstr.

EFFECT OF A PART SPAN VARIABLE INLET GUIDE VANE ON TF34 FAN PERFORMANCE Final Report
Jose Alvarez and Paul W. Schneider Sep. 1981 133 p refs
(Contract NAS3-21624)
(NASA-CR-165458; R81AEG030) Avail: NTIS HC A07/MF A01 CSCL 21E

Experimental aerodynamic and performance data were obtained from a TF34 engine. Part span variable inlet guide vanes mounted in front of the fan on the TF34 engine were tested to demonstrate the feasibility of modulating air flow and thrust for vertical takeoff aircraft systems. The fan was mapped to stall for a range of speeds and variable inlet guide were settings. Modulated fan tip performance and unmodulated hub performance were evaluated with a without an extended fan bypass splitter. The effect of a crosswind distortion screen on performance was also evaluated.

RELIABILITY ANALYSIS OF THE F-8 DIGITAL FLY-BY-WIRE SYSTEM
L. D. Brock and H. A. Goodman Oct. 1981 152 p refs
(Contract NAS4-2571)
(NASA-CR-163110; R-1324) Avail: NTIS HC A08/MF A01 CSCL 01C

The F-8 Digital Fly-by-Wire (DFBW) flight test program intended to provide the technology for advanced control systems, giving aircraft enhanced performance and operational capability is addressed. A detailed analysis of the experimental system was performed to estimated the probabilities of two significant safety critical events: (1) loss of primary flight control function, causing reversion to the analog bypass system; and (2) loss of the aircraft due to failure of the electronic flight control system. The analysis covers appraisal of risks due to random equipment failure, generic faults in esign of the system or its software, and induced failure due to external events. A unique diagrammatic technique was developed which details the combinatorial reliability equations for the entire system, promotes understanding of system failure characteristics, and identifies the most likely failure modes. The technique provides a systematic method of applying basic probability equations and is augmented by a computer program written in a modular fashion that duplicates the structure of these equations. COMPUTATIONAL METHODS OF ROBUST CONTROLLER DESIGN FOR AERODYNAMIC FLUTTER SUPPRESSION Final Report, 14 Nov. 1980 - 15 Nov. 1981
Leonard R. Anderson 15 Nov. 1981 86 p refs Presented at the 3rd Intern. Conf. on Math., Calif., 29-31 Jul. 1981 Submitted for publication
(Grant NAG1-80)
(NASA-CR-164983; VPI-Aero-125) Avail: NTIS HC A05/MF A01 CSCL 01C

The development of Riccati iteration, a tool for the design and analysis of linear control systems is examined. First, Riccati iteration is applied to the problem of pole placement and order reduction in two-time scale control systems. Order reduction, yielding a good approximation to the original system, is demonstrated using a 16th order linear model of a turbofan engine. Next, a numerical method for solving the Riccati equation is presented and demonstrated for a set of eighth order random examples. A literature review of robust controller design methods follows which includes a number of methods for reducing the trajectory and performance index sensitivity in linear regulators. Lastly, robust controller design for large parameter variations is discussed. R.J.F.

FIXED GAIN CONTROLLER DESIGN FOR AIRCRAFT Final Scientific Report, 1 Jun. 1980 - 31 May 1981
Yoram Baram and Doron Eidelman 30 Jun. 1981 31 p refs
(Grant AF-AFOSR-0178-80; AF Proj. 2301)
(AD-A104877; ESTTR-81-06; SCIENTIFIC-2; EOARD-TR-81-10) Avail: NTIS HC A03/MF A01 CSCL 01/3

A Method for designing fixed gain controllers and filters for systems with large parameter variation is presented. The approach, based of minimax information criteria, is used to design a non-adaptive back-up control system for a given aircraft and is shown to provide good performance qualities. Author (GRA)

SIMULATOR CERTIFICATION METHODS AND THE VERTICAL MOTION SIMULATOR Final Report
Thomas W. Showalter 23 Sep. 1981 67 p refs
(Contract NAS2-9741)
(NASA-CR-166252) Avail: NTIS HC A04/MF A01 CSCL 14B

The vertical motion simulator (VMS) is designed to simulate a variety of experimental helicopter and STOL/VTOL aircraft as well as other kinds of aircraft with special pitch and Z axis characteristics. The VMS includes a large motion base with extensive vertical and lateral travel capabilities, a computer generated image visual system, and a high speed CDC 7600 computer system, which performs aero model calculations. Guidelines on how to measure and evaluate VMS performance were developed. A survey of simulation users was conducted to ascertain they evaluated and certified simulators for use. The results are presented. S.L.

CONSTRUCTION AND PERFORMANCE OF NAL TWO-DIMENSIONAL TRANSONIC WIND TUNNEL

1980 104 p refs In JAPANESE; ENGLISH summary
(NAL-TR-647; ISSN-0389-4010) Avail: NTIS HC A06/MF A01

The construction and the results of initial calibration are described. This tunnel was built to meet the requirements of high Reynolds number testing of wing sections at transonic regime. It is a blowdown tunnel with a test section of 0.3m x 1.0m. The required capability of this wind tunnel is for Mach numbers ranging from 0.2 to 1.2 and for a Reynolds number up to 40 million at Mach number 0.8 with sufficient running time. An outline of the design objectives is given. The completed facilities, i.e., the wind tunnel, the instrumentation and operation system, the silencer and auxiliary equipment of the air compressor and the air reservoir, are described in detail. The performance of the tunnel when it is empty is described, and the results of a few experiments with an airfoil model of the NACA 64A410 are presented. High Reynolds number testing can be achieved in this wind tunnel without any trouble. B.W.

RESEARCH DEVELOPING CLOSED LOOP ROLL CONTROL FOR MAGNETIC BALANCE SYSTEMS Semiannual Status Report, 1 Feb. - 31 Jul. 1981

Eugene E. Covert and Charles W. Haldeman 31 Jul. 1981 50 p refs
(Grant NsG-1502)
(NASA-CR-164989; SAR-7) Avail: NTIS HC A03/MF A01 CSCL 14B

Computer inputs were interfaced to the magnetic balance outputs to provide computer position control and data acquisition. The use of parameter identification of a means of determining dynamic characteristics was investigated. The thyraton and motor generator power supplies for the pitch and yaw degrees of freedom were repaired. Topics covered include: choice of a method for handling dynamic system data; applications to the magnetic balance; the computer interface; and wind tunnel tests, results, and error analysis. A.R.H.

A LOOK INSIDE THE LANGLEY 16-FOOT TRANSONIC TUNNEL: USER'S GUIDE

Kathryn H. Peddrew, comp. Aug. 1981 197 p refs
(NASA-TM-83186) Avail: NTIS HC A09/MF A01 CSCL 14B

The 16-foot transonic tunnel is a single-return atmospheric wind tunnel having a slotted test section. The primary emphasis for research in this facility is the integration of the propulsion system into advanced aircraft concepts. The large test section size, 15.5 feet in diameter lends itself to conducting research in this area, where large models are required in order to provide adequate definition of the model geometry associated with the integration of the propulsion system. The nominal test Mach number range for this facility varies from 0.20 to 1.3. Topics covered include (1) facility description; (2) model installation equipment for aerodynamics; (3) model support system for propulsion simulation testing; (4) propulsion simulation systems; (5) calibrating propulsion simulation systems; (6) instrumentation; (7) data acquisition; (8) model design criteria; and (9) wind tunnel test planning. ANALYSIS OF SPAR 8 SINGLE-AXIS LEVITATION EXPERIMENT
J. E. Rush (Alabama Univ., Huntsville), C. F. Schafer, and R. L. Holland Sep. 1981 65 p refs
(NASA-TM-82447) Avail: NTIS HC A04/MF A01 CSCL 22A

The melting and resolidification of SPAR 8 payload melting and resolidification of a glass specimen from the in a containerless condition and the retrieval and examination of the specimen from the. The absence of container contact was assured by use of a single-axis acoustic levitation system. However, the sample contacted a wire cage after being held without container contact by the acoustic field for only approximately 87 seconds. At this time, the sample was still molten and, therefore, flowed aroung the wire and continued to adhere to it. An analysis of why the sample did not remain levitated free of container contact is presented. The experiment is described, and experimental observations are discussed and analyzed. S.L.

THE DYNAMICS AND CONTROL OF LARGE FLEXIBLE SPACE STRUCTURES Semiannual Status Report, 16 May - 15 Nov. 1981

Peter M. Bainum, R. Krishna, V. K. Kumar, and A. S. S. R. Reddy 15 Nov. 1981 26 p refs
(Grant NsG-1414)
(NASA-CR-164982) Avail: NTIS HC A03/MF A01 CSCL 22B

The dynamics and attitude and shape control of very large, inherently flexible spacecraft systems were investigated. Increasingly more complex examples were examined, beginning with a uniform free-free beam, next a free-free uniform plate/platform and finally by considering a thin shallow spherical shell structure in orbit. The effects devices were modeled. For given sets of assumed actuator locations, the controllability of these systems was first established. Control laws for each of the actuators were developed based on decoupling techniques (including distributed modal control) pole placement algorithms and a application of the linear regulator problem for optical control theory. THRUSTER-EXHAUST-PLUME-IMPINGEMENT NCE TORQUE OF THREE-AXIS-STABILIZED SATELLITE

Katsuhisa Koura, Shoichi Tsuda, Katsuyoshi Arai, and Makoto Kajikawa 1981 17 p refs In JAPANESE; ENGLISH summary
(NAL-TR-670; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

For a three-axis-stabilized satellite with reaction control thrusters and extended solar paddles, the thruster-exhaust-impingement on the paddle causes a plume impingement disturbance torque. A method of theoretical estimation of the plume torque is established and the PITS (plume-impingement torque simulation software) is produced. The plume torque obtained by the PITS is compared with the plume torque data of the Japanese medium-scale broadcasting satellite (BS). Although the roll torque is in partial disagreement. Since the present theoretical model can reasonably estimate the BS plume torque, the PITS may be available for plume-torque estimation in forthcoming three-axis-stabilized satellites. Author

HAWK LAUNCHER SHOCK ABSORBER (PART NUMBER 11567877) Final Test Report

John D. Alston Jul. 1981 53 p
(AD-A105384; AD-E950157; DRSMI/RL-81-8-TR) Avail: NTIS HC A04/MF A01 CSCL 16/1

This report summarizes the test methods and results of a series of tests to determine compliance of modified Hawk launcher shock absorbers with Technical Data Package (TDP) requirements. The primary test was a dynamic impact of the shock absorber with a 1000-lb weight traveling at 28 in./sec. The force/time relationship during shock absorber actuation induced by this impact was recorded on an oscillograph and by a digital computer. Correlation of test results was excellent and performance of the shock absorbers was good. There were some areas of noncompliance to the performance requirements of the shock absorber TDP. ENERGY DISSIPATION IN EXOSAT TANKS: TEST RESULTS

Jean-Louis Marce, Louis Torres, David Assemat (Societe pour le Perfectionnement des Materiels et Equipements Aerospatiaux, Toulouse), and Solange Michel (Societe pour le Perfectionnement des Materiels et Equipements Aerospatiaux, Toulouse) Mar. 1981 117 p refs In ENGLISH; FRENCH summary
(CNES-NT-99) Avail: NTIS HC A06/MF A01

Results of tests performed with inertia ratio and filling ratio scanning on Ariane tanks are presented. The Exosat launch requires the use of a fourth stage (P 0.7). The Exosat + P 0.7 assembly is spin stabilized with a spin rate of 50 rpm during transfer orbit. The unstable assembly is fitted with an active nutation damping system. To size this, it is necessary to know the time constant of nutation build up essentially due to fuel motion in the propane tanks and the hydrazine tank of Exosat. The major source of dissipation is the hydrazine tank for which an hysteresis phenomenon on diaphragm position was observed; the worst time constants of nutation build up, deduced from tests are 2.5 mn before P 0.7 and 1.9 mn after P 0.7 firing, taking into account the appropriate safety factors. USE OF SKW-9 SINGLE LAUNCH VEHICLE FOR THREE SATELLITES DESCRIBED
In its China Rept.: Sci. and Technol., No. 133 (JPRS-79301) 27 Oct. 1981 p 6-9 Transl. into ENGLISH from Wen Wei Po (Hong Kong), 25 Sep. 1981 p 2 (For primary document see N82-12104 03-15)
Avail: NTIS HC A04/MF A01

The ninth scientific experimental satellite (SKW-9) launch in the Chinese Peoples Republic is described. One launch vehicle was used to insert three satellites into orbit simultaneously, the one rocket multiple satellite launch technique. The three satellites have different shapes. The heaviest satellite is composed of two frustum shaped sections which emit radiowaves continuously. The lightest satellite is spherically shaped, consisting of a metallic sphere and a balloon connected by a thin wire. The third satellite is the main component of SKW-9. Its shape is an octagonal prism with a diameter of 1.2 m. Its panels convert solar energy into electrical energy to provide power to the electronic instruments aboard the satellite. The SKW-9's mission is to survey the physical properties of the upper atmosphere. E.A.K.

ADVANCED SHUTTLE SIMULATION TURBULENCE TAPES (SSTT) USERS GUIDE
Frank B. Tatom and S. Ray Smith 29 Sep. 1981 82 p
(Contract NAS8-33818)
(NASA-CR-161890; EAI-TR-81-003A) Avail: NTIS HC A05/MF A01 CSCL 22B

A nonrecursive model (based on von Karman spectra) for atmospheric turbulence along the flight path of the shuttle orbiter was developed which provides for simulation of instantaneous vertical and horizontal gusts at the vehicle center-of-gravity and also for simulation of instantaneous gust gradients. Based on this model, the time series for both gusts and gust gradients was generated and stored on a series of magnetic tapes which are entitled shuttle simulation turbulence tapes (SSTT). The time series are designed to represent atmospheric turbulence from ground level to an altitude of 120,000 meters. An appropriate description of the characteristics of the simulated turbulence stored on the tapes, as well as instructions regrding their proper use are provided. The characteristics of the turbulence series, including the spectral shape, cutoff frequencies, and variation of turbulence parameters with altitude, are discussed. Information regarding the tapes and their use is presented. Appendices provide results of spectral and statistical analyses of the SSTT and examples of how the SSTT should be used. B.J.F.

Three representative low-gravity experiments for a fluid near its liquid-vapor critical point are being defined. Two of these experiments require very careful measurements of properties of the fluid in thermodynamic equilibrium, while the third experiment is a series of optical observations of the phenomena which occur as a fluid is changed from one phase to two phases, either by cooling through the critical point, or by adiabatic expansion. There is concern that residual spacecraft motions may complicate the interpretation of the data from the proposed experiments. It is possible that the Spacelab environment will render certain desirable experiments impractical. A.R.H.

DYNAMICS OF SUPERFLUID HELIUM IN ZERO GRAVITY

c31

Peter V. Mason *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 18-24 ref (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20L

The Spacelab 2 superfluid helium experiment was designed to: (1) examine the behavior of capillary waves and measure their velocity and damping; (2) study the sloshing motion of bulk superfluid helium in near-zero gravity in order to determine its effects on sensors and attitude control systems for far infrared telescopes; and (3) determine the temperature distributions in the liquid and their correlation with bulk motion. The experiment system includes a helium cryostat with a sensor head and a microcomputer to provide electrical excitation and gather and transmit resultant responses to the experiment teams on the ground. Astronaut intervention is possible. A.R.H.

GEOPHYSICAL FLUID DYNAMICS

c34

William W. Fowlis *In its* Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 25-31 refs (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20D

Systematic scaling or dimensional analysis reveals that certain scales of geophysical fluid flows (such as stellar, ocean, and planetary atmosphere circulations) can be accurately modeled in the laboratory using a procedure which differs from conventional engineering modeling. Rather than building a model to obtain numbers for a specific design problem, the relative effects of the significant forces are systematically varied in an attempt to deepen understanding of the effects of these forces. Topics covered include: (1) modeling a large-scale planetary atmospheric flow in a rotating cylindrical annulus; (2) achieving a radial dielectric body force; (3) spherical geophysical fluid dynamics experiments for Spacelab flights; (4) measuring flow and temperature; and (5) the possible effect of rotational or precessional disturbances on the flow in the rotating spherical containers. A.R.H.

DROP DYNAMICS

c12

D. D. Elleman *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 32-33 (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 22A

The drop dynamics module is a Spacelab-compatible acoustic positioning and control system for conducting drop dynamics experiments in space. It consists basically of a chamber, a drop injector system, an acoustic positioning system, and a data collection system. The principal means of collecting data is by a cinegraphic camera. The drop is positioned in the center of the chamber by forces created by standing acoustic waves generated in the nearly cubical chamber (about 12 cm on a side). The drop can be spun or oscillated up to fission by varying the phse and amplitude of the acoustic waves. The system is designed to perform its experiments unattended, except for start-up and shutdown events and other unique events that require the attention of the Spacelab payload specialist. A.R.H.

INTERACTIONS BETWEEN SPACECRAFT MOTIONS AND THE ATMOSPHERIC CLOUD PHYSICS LABORATORY EXPERIMENTS

B. J. Anderson *In its* Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 34-35 (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 22B

In evaluating the effects of spacecraft motions on atmospheric cloud physics laboratory (ACPL) experimentation, the motions of concern are those which will result in the movement of the fluid or cloud particles within the experiment chambers. Of the various vehicle motions and residual forces which can and will occur, three types appear most likely to damage the experimental results: non-steady rotations through a large angle, long-duration accelerations in a constant direction, and vibrations. During the ACPL ice crystal growth experiments, the crystals are suspended near the end of a long fiber (20 cm long by 200 micron diameter) of glass or similar material. Small vibrations of the supported end of the fiber could cause extensive motions of the ice crystal, if care is not taken to avoid this problem. A.R.H.

TWO-PHASE FLOW AND HEAT TRANSFER UNDER LOW GRAVITY

c34

Walter Frost *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 43-57 refs (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20D

Spacelab experiment to investigate two-phase flow patterns under gravity uses a water-air mixture experiment. Air and water are circulated through the system. The quality or the mixture or air-water is controlled. Photographs of the test section are made and at the same time pressure drop across the test section is measured. The data establishes a flow regime map under reduced gravity conditions with corresponding pressure drop correlations. The test section is also equipped with an electrical resistance heater in order to allow a flow boiling experiment to be carried out using Freon II. High-speed photographs of the test section are used to determine flow patterns. The temperature gradient and pressure drop along the duct can be measured. Thus, quality change can be measured, and heat transfer calculated. A.R.H.

SUSCEPTIBILITY OF MATERIALS PROCESSING EXPERIMENTS TO LOW-LEVEL ACCELERATIONS c12
Robert J. Naumann *In its* Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 63-68 (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 22A

The types of material processing experiments being considered for shuttle can be grouped into four categories: (1) contained solidification experiment; (2) quasicontainerless experiments; (3) containerless experiments; and (4) fluids experiments. Low level steady acceleration, compensated and uncompensated transient accelerations, and rotation induced flow factors that must be considered in the acceleration environment of a space vehicle whose importance depends on the type of experiment being performed. Some control of these factors may be exercised by the location and orientation of the experiment relative to shuttle and by the orbit vehicle attitude chosen for mission. The effects of the various residual accelerations can have serious consequence to the control of the experiment and must be factored into the design and operation of the apparatus. A.R.H.

CONVECTION IN FLUIDS AT REDUCED GRAVITY c34
Simon Ostrach *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 69-95 (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20D

Natural convection is not always harmful and, therefore, to be avoided. In some situations it may be desirable to have fluid flows in space processes, e.g., to stir the fluid phase for mixing and cooling or to help maintain concentration gradients. In may event, it is important to know the extent and nature of convection in space and the factors on which it depends, in order either to minimize the effects to convection, or to utilize the convection to advantage. The information needed to assess both conventional and unstable convection includes: (1) the magnitude and direction of accelerations; (2) gometric configuration; (3) imposed boundary conditions; and (4) material properties. EFFECTS OF SPACECRAFT MOTIONS ON FLUIDS EXPERIMENTS c34
Roger F. Gans *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 96-102 refs (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20D

The equations of motion governing an incompressible fluid contained in an orbiting laboratory were examined to isolate various fictitious forces and their relative influence on the fluid. The forces are divided into those arising from the orbital motions and those arising from small local motions of the spacecraft about its center of mass. The latter dominate the nonrotating experiments. Both are important for rotating experiments. A brief discussion of the onset of time-dependence and violent instability in earth-based rotating and precesssing systems is given. T.M.

TRANSIENT THERMAL CONVECTION IN MICROGRAVITY c34
Robert F. Dressler *In* NASA. Marshall Space Flight Center Spacecraft Dyn. as Related to Lab. Expt. in Space Nov. 1981 p 103-112 refs (For primary document see N82-12109 03-18)
Avail: NTIS HC A10/MF A01 CSCL 20D

The unsteady two-dimensional thermal convection in a cylinder due to a transient acceleration solved for a step-function excitation. From this, the solution was obtained for an arbitrary time-dependent acceleration. The solutions are valied for sufficiently low Rayleigh numbers and therefore, relevant to microgravity fields. As an example, two graphs are presented for he convection resulting from the movement of an astronaut inside the Shuttle. The analysis can be applied to obtain any other convective flows such as those caused by g-jitter or variable rotation of the Shuttle. T.M.

Zero-gravity conditions in Earth orbit cannot be obtained in the Shuttle Orbiter, however, through careful planning, the dynamic environment and its effects on experiments can be minimized. Futhermore, although the dynamic environment of the Shuttle Orbiter is to a large degree stochastics, it is possible to predict characteristics of this environments so that scientists and technologists can plan their experiments and mission managers can plan missions with a view toward minimizing the effects of spacecraft dynamics on experiments. Characteristics of the dynamic environment that might be predicted include typical and 'worst case' values of vehicle acceleration for the anticipated acceleration sources, typical number of acceleration event, duration times of disctete acceleration events, bandwidth of acceleration time history, etc. T.M.

Orbital mechanics as a discipline is principally concerned with solving the set of equations for analyzing the motion of a satellite under various conditions. This activity on the surface may not seem crucial to conducting experiments in space, but it provides insights into the way in which forces may influence these experiments. More directly, for experiments concerned with external targets, it provides predictions of the satellites's position and velcoity verus time, enabling extensive preflight planning and resulting in optimum use of on-orbit time. The behavior of particles relative to a spacecraft frame of reference was examined. Significant spatial excursions of particles in space can occur relative to the spacecraft frame of reference as a result of drag deceleration of the vehicle. These vehicle excursions tend to be large as time increases. Thus, if the particle is required to remain in a specified volume, constraints may be required. Thus, for example, in levitation experiments it may be extremely difficult to turn off the forces of constraint which keep the particles in a specified region. This means experiments which are sensitive to disturbances may be very difficult to perform if perturbation forces are required to be absent. T.M.

Spacecraft acceleration resulting from firings of vernier control system thrusters is an important consideration in the design, planning, execution and post-flight analysis of laboratory experiments in space. In particular, scientists and technologists involved with the development of experiments to be performed in space in many instances required statistical information on the magnitude and rate of occurrence of spacecraft accelerations. Typically, these accelerations are stochastic in nature, so that it is useful to characterize these accelerations in statistical terms. Statistics of spacecraft accelerations are summarized. T.M.

Most of the structural dynamics resources allocated to the Space Shuttle are concentrated on the flight events which result in critical structural loads and/or minimum control stability margins. Since these events are primarily sub-orbital, the data base of interest to those involved in orbital experimentation is somewhat limited. A brief discussion of available data is given. Although estimates of peak acceleration levels and the associated frequency spectrum in the payload bay due to thrusting of the various control system thrusters were made, the actual levels and time histories must be based on updated structural math models and a detailed knowledge of the input forcing functions. T.M.

APPLICATION OF THE THREE BEAM LASER CROSS CORRELATION TECHNIQUE IN THE EXHAUST PLUME OF A LIQUID FUELLED ROCKET MOTOR
G. J. Ball May 1981 38 p refs
(Contract AT/2040/084/XP)
(AASU-343) Avail: NTIS HC A03/MF A01

A method for acquiring data in order to validate computer predictions of radial profiles of rms density fluctuations is presented. The three beam laser cross correlation technique was used to measure radial profiles of rms density fluctuation in a liquid fuelled rocket motor. The measured values are in close agreement with computer predicted profiles. A detailed error analysis is presented which indicates that fundamental limitations on the accuracy of the technique are set by practical motor burn times and the power spectrum of the fluctuating density field. THERMAL OXIDATIVE DEGRADATION REACTIONS OF PERFLUOROALKYLETHERS Final Report, Sep. 1980 - Sep. 1981
K. L. Paciorek, T. I. Ito, and R. H. Kratzer Oct. 1981 46 p refs
(Contract NAS3-22517)
(NASA-CR-165516; SN-1020-A1-F) Avail: NTIS HC A03/MF A01 CSCL 07C

The mechanisms operative in thermal oxidative degradation of Fomblin Z and hexafluoropropene oxide derived fluids and the effect of alloys and additives upon these processes are investigated. The nature of arrangements responsible for the inherent thermal oxidative instability of the Fomblin Z fluids is not established. It was determined that this behavior is not associated with hydrogen end groups or peroxy linkages. The degradation rate of these fluids at elevated temperatures in oxidizing atmospheres is dependent on the surface/volume ratio. Once a limiting ratio is reached, a steady rate appears to be attained. Based on elemental analysis and oxygen consumption data, CF2OCF2CF2O2, no. CF2CF2O, is one of the major arrangements present. The action of the M-50 and Ti(4 Al, 4 Mn) alloys is much more drastic in the case of Fomblin Z fluids than that observed for the hexafluoropropene derived materials. The effectiveness of antioxidation anticorrosion additives, P-3 and phospha-s-triazine, in the presence of metal alloys is very limited at 316 C; at 288 C the additives arrested almost completely the fluid degradation. The phospha-s-triazine appears to be at least twice as effective as the P-3 compound; it also protected the coupon better. The Ti(4 Al, 4 Mn) alloy degraded the fluid mainly by chain scission processes this takes place to a much lesser degree with M-50. S.L.

REACTIONS OF TRIBUTYLSTANNYL ANIONIODS WITH ALKYL BROMIDES
Martin Newcomb and Michael G. Smith 28 Sep. 1981 23 p refs Submitted for publication
(Contract N00014-79-C-0584; Grant NSF CHE-78-27411; NR Proj. 053-714)
(AD-A105433; TR-2) Avail: NTIS HC A02/MF A01 CSCL 07/3

The reactions of tributylstannyl anionoids (Bu3SnM, M = Li, K, Cs) with alkyl bromides have been studied. Tributylstannylpotassium and -cesium were prepared by deprotonation of tributyltin hydride with the mixed deprotonating agents potassium (cesium) diisopropylamide/lithium tert-butoxide. The predominant mechanism for alkylation of tributylstannyl anionoids by primary bromides is an S(N)2 displacement or its mechanistic equivalent, but the reactions of tributylstannyllithium with two secondary bromides appear to involve free radicals as intermediates. Dicyclohexylphosphine, which serves as a trapping agent for intermediate free radicals, was found to react relatively slowly with tributylstannyllithium to give hexabutylditin. GRA

STRENGTH EVALUATION TEST OF HOT-PRESSED SILICON NITRIDE AT ROOM TEMPERATURE
Katsutoshi Matsusue, Kitao Takahara, and Ryosaku Hashimoto 1981 26 p refs In JAPANESE; ENGLISH summary
(NAL-TR-676; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

In order to study strength characteristics at room temperature and the strength evaluating-method of ceramic materials, bending-tests of bars, tensile tests of rectangular plates and spin-tests of disks with a hole in the center were conducted on hot-pressed Si3N4 specimens. The mean strengths of the specimens as shown by either the tensile or the spin tests, agreed well with the values predicted from the results of the mean strength and the Weibull's modules by bending-tests of the material and the effective volume. The mean strength generally decreased with increasing effective volumes of the specimens when said effective volumes were not very small. However, they approached a certain value independent of the effective volumes when they were small enough. The limit value of the effective volumes was about 1 cm mm. Spin-testing was shown to be a useful method of testing the strength of ceramics. Observations of the fracture origins and of propagation on the fracture surfaces were made. When the effective volumes were large as in the case of spin-testing, two or more fracture origins were sometimes observed. Locations of the fracture origins did not necessarily coincide with that site where maximum stress was predicted to occur, and the discrepancies between the actual and predicted sites were generally great when stress-gradients on the fracture surface were small. B.W.

HYBRIDIZED POLYMER MATRIX COMPOSITE Final Report
Bruce A. Stern and Teunis Visser Sep. 1981 85 p refs
(Contract NAS3-21384)
(NASA-CR-165340) Avail: NTIS HC A05/MF A01 CSCL 11D

Under certain conditions of combined fire and impact, graphite fibers are released to the atmosphere by graphite fiber composites. The retention of graphite fibers in these situations is investigated. Hybrid combinations of graphite tape and cloth, glass cloth, and resin additives are studied with resin systems. Polyimide resins form the most resistant composites and resins based on simple novolac epoxies the least resistant of those tested. Great improvement in the containment of the fibers is obtained in using graphite/glass hybrids, and nearly complete prevention of individual fiber release is made possible by the use of resin additives. S.L.

THE EFFECT OF RESIN ON THE IMPACT DAMAGE TOLERANCE OF GRAPHITE-EPOXY LAMINATES
Jerry G. Williams and Marvin D. Rhodes Oct. 1981 46 p refs Presented at the 6th ASTM Conf. on Composite Mater.: Testing and Design, Phoenix, Ariz., May 1981
(NASA-TM-83213) Avail: NTIS HC A03/MF A01 CSCL 11D

The effect of the matrix resin on the impact damage tolerance of graphite-epoxy composite laminates was investigated. The materials were evaluated on the basis of the damage incurred due to local impact and on their ability to retain compression strength in the presence of impact damage. Twenty-four different resin systems were evaluated. Five of the systems demonstrated substantial improvements compared to the baseline system including retention of compression strength in the presence of impact damage. Examination of the neat resin mechanical properties indicates the resin tensile properties influence significantly the laminate damage tolerance and that improvements in laminate damage tolerance are not necessarily made at the expense of room temperature mechanical properties. Preliminary results indicate a resin volume fraction on the order of 40 percent or greater may be required to permit the plastic flow between fibers necessary for improved damage tolerance. B.W.

BIAXIAL TESTS OF FLAT GRAPHITE/EPOXY LAMINATES Final Report, 1 Feb. 1976 - 31 Dec. 1980
Harold Liebowitz and Douglas L. Jones Oct. 1981 106 p refs
(Grant NsG-1289)
(NASA-CR-165793) Avail: NTIS HC A06/MF A01 CSCL 11D

The influence of biaxially applied loads on the strength of composite materials containing holes was analyzed. The analysis was performed through the development of a three dimensional, finite element computer program that is capable of evaluating fiber breakage, delamination, and matrix failure. Realistic failure criteria were established for each of the failure modes, and the influence of biaxial loading on damage accumulation under monotonically increasing loading was examined in detail. Both static and fatigue testing of specially designed biaxial specimens containing central holes were performed. Static tests were performed to obtain an understanding of the influence of biaxial loads on the fracture strength of composite materials and to provide correlation with the analytical predictions. The predicted distributions and types of damage are in reasonable agreement with the experimental results. A number of fatigue tests were performed to determine the influence of cyclic biaxial loads on the fatigue life and residual strength of several composite laminates. B.W.

IN-SERVICE INSPECTION METHODS FOR GRAPHITE-EPOXY STRUCTURES ON COMMERCIAL TRANSPORT AIRCRAFT Final Report
M. L. Phelps Nov. 1981 105 p refs
(Contract NAS1-15304)
(NASA-CR-165746) Avail: NTIS HC A06/MF A01 CSCL 11D

In-service inspection methods for graphite-epoxy composite structures on commercial transport aircraft are determined. Graphite/epoxy structures, service incurred defects, current inspection practices and concerns of the airline and manufacturers, and other related information were determind by survey. Based on this information, applicable inspection nondestructive inspection methods are evaluated and inspection techniques determined. Technology is developed primarily in eddy current inspection. EFFECT OF FIGHTER ATTACK SPECTRUM ON COMPOSITE FATIGUE LIFE Final Report, Sep. 1978 - Oct. 1980
R. Badaliance and H. D. Dill Mar. 1981 126 p refs
(Contract F33615-78-C-3218; AF Proj. 2401)
(AD-A105034; AFWAL-TR-81-3001) Avail: NTIS HC A07/MF A01 CSCL 11/4

The objective was to evaluate the effect of fighter wing load spectrum variations on the life behavior of composite structures. Six types of spectra were generated: (a) clipping to 90% test limit stress, (b) addition of stress overloads, (c) addition of low loads, (d) truncation to 70% test limit stress, (e) clipping of tension loads, (f) increased severity and number of air-to-air loads. A single hole compression test specimen was designed to simulate fatigue critical areas of fighter wing skins. GRA

ELECTROMAGNETIC DIFFRACTION BY A NARROW SLIT IN AN IMPEDANCE SHEET-E-POLARIZATION Final Report
Donald F. Hanson 24 Jul. 1981 65 p refs
(Grant AF-AFOSR-0172-80; AF Proj. 2301)
(AD-A105029; AFOSR-81-0645TR) Avail: NTIS HC A04/MF A01 CSCL 11/4

Composite materials have come into use lately in aircraft construction because of their high strength and low weight. This report examines a method for computing the shielding effectiveness of a narrow slit in a composite material. This corresponds to a joint or seam between two composite panels. For low frequency incident fields, the composite can be effectively modelled as an infinitely thin impedance sheet. The literature on impedance sheets is reviewed and a general integral equation formulation for impedance sheets is described. Since only narrow slits (seams) are of practical interest, a quasi-static (low frequency) approach is developed. A dual integral equation is derived for the problem. The dual integral equation is reduced to a Fredholm second kind integral equation. This integral equation is solved by expanding the unknown in terms of Legendre polynomials. An analytic solution for the problem of a narrow slit in a perfectly conducting plane is also obtained. GRA

RADIO SHACK TRS-80 POCKET COMPUTER SOLUTIONS TO COMPOSITE MATERIALS FORMULAS Final Report, Jan. - May 1981
Won J. Park Aug. 1981 26 p refs
(Contract F33615-79-C-5125)
(AD-A105173; AFWAL-TR-81-4074) Avail: NTIS HC A03/MF A01 CSCL 11/4

This volume contains the description and instructions of the use of Radio Shack TRS-80 Pocket Computer for the key calculations of the stiffness and strength of symmetric laminated composites. The magnetic cassette tapes contain the required programming in the language of BASIC. With the aid of tape recorder for loading the program into TRS-80, instant calculation can be made for practical use. The formulas and equation numbers used in the programming have been derived in a book entitled, Introduction to Composite Materials, coauthored by S. W. Tsai and H. T. Hahn, published by Technomic Publishing Company, Westport, CT, July 1980. GRA

RESEARCH AND DEVELOPMENT WORK CONCERNING A FIBER REINFORCED PLASTIC MATERIAL WHICH IS ISOELASTIC TO BONE Final Report
Eva Poeschel, Kari Koester-Loesche, Harald Ehard, Johann Kubicek, Heinrich Deibig, Ulrich Mueller, and Ulrich Roth Bonn Bundesministerium fuer Forschung und Technologie Oct. 1980 84 p refs In GERMAN; ENGLISH summary Original contains color illustrations Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-063; R-63.436-9; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 17,70

A material used for endoprothesis, whose biomechanical properties allow it to adapt to prevailing stress conditions, is presented. A fiber reinforced plastic, adaptable to the specific loading conditions of the bone with the aid of its anisotropic mechanical properties, is applied. Polymethylmethacrylate reinforced with carbon fibers, glass fibers, or a combination of both, proves suitable. According to the present state of development and knowledge, these materials exhibit good biocompatibility and are suitable for medium loads in optimized form. Further investigations are required for application under conditions of extreme stress. Author (ESA)

SIGNIFICANCE OF MICROPORES IN ESTIMATING ADSORPTION PROPERTIES OF ACTIVATED CARBON
Jussi Ranta May 1981 120 p refs In FINNISH; ENGLISH summary
(VTT-39; ISBN-951-38-1197-2; ISSN-0355-3590) Avail: NTIS HC A06/MF A01

Literature on the pore structure and the micropore structure of activated carbon is reviewed. Classical research methods based on Kelvin's equation are still most generally used, although reliable information is obtained only about larger pores. In micropore research, a method based on Dubinin's equation determines the total volume and mean size. These parameters are of central significance in the adsorption from steam or gas phases. The determination of micropore parametres with the aid of nitrogen adsorption is studied. Owing to the strong adsorbability, adsorption into larger pores also occurs simultaneously, and is considered when calculating properties of micropores. The dependence of adsorption from liquid phases on the micropore parameters of activated carbon was studied in part with the aid of water solutions of partly water soluble organic materials. The limit volume of micropores is essential. Author (ESA)

APPLICATIONS OF VIBRATING WIRE ELECTRODES TO ELECTROANALYSIS Ph.D. Thesis
Kenneth W. Pratt, Jr. 1981 290 p
Avail: Univ. Microfilms Order No. 8122556

The design and construction of Au and Pt vibrating electrodes are described. These electrodes were vibrated by means of a loudspeaker at peak to peak amplitudes from 0 to 3.3 mm and frequencies from 30 to 510 Hz. Electronic intrumentation is described which permitted direct recording of the limiting current as a function of the vibrational amplitude. This instrumentation was also used to effect hydrodynamic modulation at the vibrating electrode, with phase selective detection of the resultant 10 Hz alternating component of the electrode current. The hydrodynamic behavior of vibrating electrodes was studied visually and electrochemically. Hydrodynamic transitions in the flow patterns induced by the vibrating electrodes were characterized. The exponential dependencies of the limiting current on the vibrational parameters were determined. Dissert. Abstr.

TUBULAR ELECTRODES IN FLOW INJECTION ANALYSIS Ph.D. Thesis
Peter Lawrence Meschi 1981 210 p
Avail: Univ. Microfilms Order No. 8122540

Equations describing the current-time response of the electrode, i(t) the maximum of the current-time curve, i sub p and the area under the current-time curve, Q sub p, are derived as a function of the volume of the sample, V sub s, the volume of the flow system, V sub r the flow rate of the fluid stream, V sub s, the coefficient of dispersion, K and the steady-state current, I sub s for the dispersion of a sample in a straight tube under the conditions of laminar flow. The steady-state behavior of the tubular electrode is also described and the validity of the concept of a flow-rate independent component of the steady-state is brought into serious question. The concept was originally proposed to explain the nonzero intercepts obtained for linear extrapolations of plots of V sub f (1/3). The nonzero intercepts are concluded to be mathematical artifacts of inaccurate data analysis rather than the results of an electrochemical phenomenon. Dissert. Abstr.

ANALYSIS FOR ORGANIC PIGMENTS USING SOLUTION SPECTROPHOTOMETRY Ph.D. Thesis
Romesh Kumar 1981 219 p
Avail: Univ. Microfilms Order No. 8121151

Simple analytical schemes and standard reference data were developed for the identification of organic pigments by solution spectrophotometry. This technique involves extraction of the pigment in a suitable solvent and the measurement of the resulting solution on an analytical spectrophotometer (380-900 nanometers) followed by the comparison of the solution spectrum with the spectra of known pigments. The solution spectra were obtained as log absorbance vs wavelengths displays because of the independance of the curve shape of the concentration of the solution. Samples such as oil paints, acrylic paints, inks and plastics containing single and mixed pigments were analyzed successfully. A solvent-extraction and separation scheme was also developed for the identification of natural organic colorants used in old paintings. Organic pigments used in some painting samples and postage stamps were also identified. Dissert. Abstr.

LASER EXCITED SHPOL'SKII SPECTROSCOPY FOR THE SELECTIVE EXCITATION AND DETERMINATION OF POLYNUCLEAR AROMATIC HYDROCARBONS Ph.D. Thesis
Yen Yang 1981 131 p
Avail: Univ. Microfilms Order No. 8122572

An excimer laser pumped, dye-laser coupled with gated detection was employed in the LESS system. The sharp absorption bandwidth exhibited PAHs in Shpol'skii hosts (n-alkanes) at 15 K facilitated the selective excitation and sensitive detection of the luminescence through narrow band laser excitation. It was shown that LESS is capable of distinguishing between structural isomers was well as alkyated substitutional isomers when these occurred in complex mixtures. Luminescence spectra, site population dependency on concentrations, anaytical curves, and detection limits were studied. It was found that: reproducible site population of PAHs at concentration levels below one ppm could be achieved through reproducible cooling regimes; self-absorption of the 0-0 fluorescence lines could be alleviated on excitation with reduced laser power; analytical calibration curves were linear over 3.5 decades in concentration; and detection limits were on the order of parts-per-trillion. Dissert. Abstr.

THE KINETICS OF THE REVERSE DEACON REACTION Ph.D. Thesis
Arun K. Nanda 1981 153 p
Avail: Univ. Microfilms Order No. 8122546

The kinetics of the chlorination of water vapor at high temperatures were investigated using an eleven-pass glass reactor 4 mm ID and 511 mm long. The rate expression for the reverse Deacon reaction was developed from the experimental data at 879 deg K. Varying the partial pressures of the reactants, the rate data were collected, and these results were synthesized to formulate the rate law. The rate expression was verified by the integral approach and the results were extended to two other temperatures, 777 and 983 deg K. The parameters of the rate expression were obtained by means of a linear-least square fit. The frequency factor and the energy of activation were determined for the reverse Deacon reaction. An attempt was made to verify these parameters with the theoretical values from collision theory and activated complex theory. A mechanism consistent with one of the limiting conditions was postulated. The effects of the flow rates of the reactants and temperature on conversion of chlorine were also examined. Dissert. Abstr.

CARBON-SUPPORTED IRON CATALYSTS FOR CO HYDROGENATION Ph.D. Thesis
Hyun-Jong Jung 1981 304 p
Avail: Univ. Microfilms Order No. 8120442

Carbon blacks, activated carbons, graphitized carbon, and molecular sieve glassy carbons are used to prepare a number of supported iron catalysts. All catalysts are characterized by CO chemisorption and X-ray diffraction measurements to determine average iron crystallite sizes. Magnetization measurements are made on representative samples to estimate metal particle sizes which are compared to the aforementioned values. The catalytic properties of carbon supported iron are then determined for the CO hydrogenation reaction at 101 kPa using a differential, plug flow reactor. Carbon monoxide hydrogenation over iron is a structure sensitive reaction, because of lower surface concentrations of hydrogen on small crystallites caused by inhibited H2 chemisorption. Dissert. Abstr.

N82-12155 Rutgers - The State Univ., New Brunswick, N. J.
FERMENTATION KINETICS AND PROCESS DEVELOPMENT FOR ENHANCED RATE OF PRODUCTION OF ETHANOL FROM CARBOHYDRATES Ph.D. Thesis
Chun-Ko Jin 1981 221 p
Avail: Univ. Microfilms Order No. 8122085

A continuous cascade fermentation process comprising eight tanks in series, employing a protein phosphoipid complex as a protective agent (PA) was performed for ethanol production from glucose. An increase of 58.4% in fermenter productivity was obtained due to the addition of PA. A kinetic model including product and substrate inhibition effects is proposed. Parameters appearing in the kinetic model were estimated by using the method of least squares. It is found that product inhibition effect dominates over the substrate inhibitor system. On the addition of PA, both inhibitor effects are reduced to as little as about one fourth of that without PA. It is also found that the use of PA primarily protects the cells against ethanol inhibition rather than substrate inhibition. A steady state criterion is discussed. Dissert. Abstr.

N82-12156 Arizona Univ., Tucson.
FUEL NITROGEN CONVERSION DURING FUEL RICH COMBUSTION OF PULVERIZED COAL AND CHAR Ph.D. Thesis
James William Glass 1981 334 p
Avail: Univ. Microfilms Order No. 8121921

The conversion of coal and char nitrogen is investigated during fuel rich combustion. The roles of NO, HCN, and NH3, and char nitrogen in the post combustion gases in the first, fuel rich stage of a staged combustor are clarified. The fuel rich conversion of char nitrogen show that at all stoichiometries, the concentrations of HCN and NH3 in the post time gases are small compared to the concentration of NO. Char nitrogen conversion is stoichiometric or greater. Destruction of NO is found to be controlled by a heterogeneous mechanism involving the char carbon surface. The mechanism is deactivated by oxygen. Dissert. Abstr.

CORRELATION AND PREDICTION OF VAPOR-LIQUID EQUILIBRIUM IN ELECTROLYTIC SOLUTIONS Ph.D. Thesis
Anil Krishna Rastogi 1981 313 p
Avail: Univ. Microfilms Order No. 8121970

Two expressions for the excess Gibbs free energy are presented which correlated and predict vapor-liquid equilibrium and the mean molal activity coefficient of an electrolyte in a ternary mixture containing water and either MeOH of EtOH. The proposed equations take into account coulombic forces between ions and the physical interaction forces between ion-solvent and solvent-solvent molecules in a solution. Dissert. Abstr.

N82-12158 New Jersey Inst. of Tech., Newark.
SEPARATION VIA MULTI-COLUMN pH PARAMETRIC PUMPING Ph.D. Thesis
Wei Tai Yang 1981 218 p
Avail: Univ. Microfilms Order No. 8121973

The study of multi-column pH parametric pumping, a separation technique which applies the principle of parametric pumping and uses pH as control variable is presented. Studies emphasize on the mass transfer and the capability of separation by multi-column pH parametric pumping. A Two-pH Levels Parapump is capable of enriching the product stream with solute components; a Three-pH Levels Parapump is capable of splitting components into two product streams. The separation capability of multi-column parapump is greatly superior to that of single-column parapump. As compared to cycling zone operation, parametric pumping gives a higher separation factor. Hemoglobin and albumin are chosen for the experimental model system to demonstrate the separation capability of multi-column pH parametric pumping, and to verify the predictability of the models. Dissert. Abstr.

ION TRANSPORT IN CHARGED POROUS MEDIA THEORY AND EXPERIMENTS Ph.D. Thesis
Gerald Bruce Westermann-Clark 1981 169 p
Avail: Univ. Microfilms Order No. 8118795

A mathematical model for ion transport in a charged porous medium as well as the results of experiments to test the validity of this model are presented. The Nernst-Planck, Poisson-Boltzmann, and Navier-Stokes equations are used to predict the steady state transport of ions through a circular capillary caused by concentration, pressure and electrical potential differences across the ends of the capillary. The ratio of the capillary radius to the Debye length of the solution inside the capillary and the product of the capillary radius and surface charge density must be known for the model to be solved. The track etched mica system used to test the model has a known number of identical pores in a given membrane, pores whose geometry is very accurately determined, and whose surface charge is the only unknown parameter. Dissert. Abstr.

N82-12160 Lehigh Univ., Bethlehem, Pa.
CONTROL OF HIGH PURITY DISTILLATION COLUMNS Ph.D. Thesis
Carmelo Fuentes 1981 109 p
Avail: Univ. Microfilms Order No. 8118832

The dynamics and control were studied via digital simulation. The effects of product purity, relative volatility, composition analyzer sampling time and magnitude of the disturbance were explored.

Equimolar and non-equimolar overflow systens were considered. Results show that systems with low relative volatility (alpha = 2) respond slowly enough so that good control can be achieved at very high purity levels with a 5 minute dead time in the analyzer. However, systems with high volatility (alpha = 4) respond so quickly that large deviations in products purity occur before the analyzer can respond. The dynamic response of the latter systems is very non linear. Effective control was obtained for these high relative volatility systems by using a composition/temperature cascade system. Dissert. Abstr.

CRYOGENIC DEPOSITION, DESORPTION, AND REACTION STUDIES OF STRATOSPHERICALLY RELEVANT SPECIES Ph.D. Thesis
Richard Fezza 1981 413 p
Avail: Univ. Microfilms Order No. 8121469

The condensing of CF2Cl2, CFCl3, N2, O3, NO, N2O, and CO2, on various cryosurface materials including electropolished, gold-flashed, or hexa-methyldisilazane coated stainless steel disks was investigated. A strong, spurious, first condensation was observed in the 200-250K temperature range for N2O, CO2, NO, CF2Cl2, and CFCl3, with weaker effects for N2 and O2. This phenomenon is believed due to water vapor contamination of the cryosurface, possibly forming a clathrate-like structure with the beam and background species. Desorption spectra for the binary systems CF2Cl2/N2, CF2Cl2/O2, CFCl3/N2, and CFCl3/O2, as well as those for the pure components shown carry over of the chlorofluoromethanes at low concentrations by N2 and O2. Temperature programmed and flash desorption techniques revealed a surprising, persistent disproportionation of NO to NO2 during desortion of NO-containing condensates t levels near 50%. Ozone was found to recombine during desorption, exhibiting a threshold concentration effect, and conversion related to absolute quantities of deposits. Dissert. Abstr.

N82-12162 California Univ., Santa Barbara.
DYNAMIC MODELING AND CONTROL STRUCTURES FOR A TUBULAR AUTOTHERMAL REACTOR AT AN UNSTABLE STATE Ph.D. Thesis
Dominique Bonvin 1980 455 p
Avail: Univ. Microfilms Order No. 8120742

A laboratory scale autothermal fixed bed reactor with internal countercurrent heat exchange was operated at a naturally unstable state. Modal control with incomplete state feedback was used; the often difficult task of estimating the unmeasured state variables was purposely avoided. A generalized structural dominance method was developed to determine along with the dominant response modes of the system, the most sensitive state variables and the most effective inputs. The method provides strong guidelines to model reduction. The technique is successfully demonstrated in applications to other large scale systems in addition to the autothermal reactor. A major emphasis is given to the investigation of modal approaches to model reduction, and several techniques were evaluated on a common basis which permits comparisons to be made. Dissert. Abstr.

STRUCTURE OF LAMINAR PREMIXED FLAMES OF METHANE, METHANOL AND THEIR BLENDS IN OXYGEN Ph.D. Thesis
Habib Ibrahim Abu-Al-Hamayel 1981 145 p
Avail: Univ. Microfilms Order No. 8122264

The overall characteristics of the flames under study were examined. The effect of variation of combustion chamber pressure was observed. The decrease in pressure of the combustion chamber spread the flame zone and better sampling of the combustion gases was possible. Higher temperature profiles were noticed for subatmospheric pressure runs as a result of moving the flame away from the burner surface. The changed of species mole fractions with equivalence ratio is reported. The mole fraction profiles of CO2 mole fraction profile were observed to be minimum for the richest flame for the three fuels. In the attached flame runs, significant product concentrations are found near the burner surface. By increasing the total flow rate of the reactants, the free standing flames were formed and higher fuel concentrations were observed over the prereaction zone. The effect of the fuel structure on the composition profiles was determined.
Dissert. Abstr.

SCALE PREVENTION. STUDY ON THE CRYSTALLIZATION OF CALCIUM SULFATE AND BARIUM SULFATE WITH AND WITHOUT INHIBITORS Ph.D. Thesis
Gerda Maria vanRosmalen 1981 164 p refs
Copyright. Avail: Issuing Activity

Scale formation (precipitation fouling) is defined and its effects on various industrial processes and systems are described. Chemical, physical, and mechanical methods for removing and controlling scale are reviewed with emphasis on the chemical threshold treatment with the addition of trace amounts of inhibitors as well as the use of a fluidized bed. Topics covered include: (1) growth affinity in aqueous solutions; (2) growth kinetics in slightly soluble crystals; (3) growth of calcium sulfate dihydrate crystals in suspension; (4) quantitative description of the influence of the inhibitor concentration on the growth rate; (5) growth of barium sulfate crystals in suspension; (6) influence of the molecular structure of some biosphosphonates on the growth inhibition of barium sulfate crystals in suspension; (7) the influence of various additives at different ph values on the growth rate; and scale inhibition of calcium sulfate by a fluidized bed. FIRE EXTINGUISHANT MATERIALS Patent Application
Robert L. Altman, Ludwig A. Mayer (San Jose State Univ.), and Alan C. Ling, inventors (to NASA) (San Jose State Univ.) Filed 3 Nov. 1981 11 p
(NASA-Case-ARC-11252-1; US-Patent-Appl-SN-317977) Avail: NTIS HC A02/MF A01 CSCL 21B

Fire extinguishant materials were developed for extinguishing fires on hot metal surfaces caused by liquid fuels such as jet engine fuels. The composition of the materials is a mixture of a finely divided aluminum compound and alkali metal, stannous or plumbous halide. The aluminum compound may be aluminum hydroxide, alumina or boehmite, but preferably it is an alkali metal dawsonite. The metal halide may be an alkali metal, e.g. potassium iodide, bromide, or chloride, or stannous or plumbous iodide, bormide, or chloride. Potassium iodide is preferred. The presence of the halide improves the performance of the aluminum compound in extinguishing fires on hot metal surfaces. *NASA

COMBUSTION AND EMISSION CHARACTERISTICS OF A MODEL GAS TURBINE COMBUSTOR BURNING LEAN HETEROGENEOUS MIXTURES
Shigeru Hayashi and Hideshi Yamada 1981 21 p refs In JAPANESE; ENGLISH summary
(NAL-TR-666; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

Rich, heterogeneous mixtures of kerosine and air were injected into the combustion air using an acoustic atomizer and flames were stablized by means of a swirler. Experiments were made at inlet air temperatures of 450, 550, and 650 K under atmospheric pressure. The overall equivalence ratio ranged from the blow-off limit to unity. The degrees of atomization were varied by changing the feeding rate of the atomizing air. The emission indexes of NOx are compared with those for some simplified model combustors burning homogeneous mixtures and for fuel-rich primary zone combustors burning sprays from conventional pressure atomizers or premixed sprays from a mixing tube. The emission index of NOx at th exit is correlated with the adiabtic flame temperature T sub f. The temperature coefficient is compared with a typical value of 0.0006 for homogenous mixtures. Standard Arrhenius plots of the rate of EI(NOx) versus 1/T sub f give a typical value of 18kcal/mol for the activation energy. The NOx emission decreases with increasing degrees of atomization and mixing, the effect being more significant at higher inlet air temperature. The emission indexs of CO, THC, and NOx at 650 K are 8, 0.003 and 13, respectively, under the highest degree of atomization with a combustion efficiency greater than 99.9% and blow-off velocity of about 60m/sec. SECONDARY ION MASS SPECTROMETRIC IMAGE DEPTH PROFILING FOR THREE-DIMENSIONAL ELEMENTAL ANALYSIS Interim Technical Report
Adam J. Patkin and George H. Morrison 1 Oct. 1981 24 p refs
(N00014-80-C-0538)
(AD-A105092; TR-5) Avail: NTIS HC A02/MF A01 CSCL 07/4

Three-dimensional elemental microcharacterization of the near-surface regions of solid samples is performed by combining the dynamically eroding nature of secondary ion mass spectrometry (SIMS), spatially resolved multi-area, multi-element ion intensity data, and digital image processing. Multiple simultaneous depth profiles and three-dimensional image profiles are used to analyze a metal-oxide semiconductor (MOS) integrated circuit and ion implant samples. Author (GRA)

The procedures and some results of an experimental program to record and analyze the thermal radiation from particles suspended in a gaseous flow (two-phase flow) are presented in this report. Carbon particles were added to a nitrogen gas stream at 800-900 K flowing at approximately 50 m/s. Thermal radiation from these particles was observed and recorded using a scanning monochromator for the wavelength range of 1.0 to 5.5 micrometers. These spectra were corrected for instrument response and are compared to theoretical calculations which predict the infrared emission from small particles. Since these predictive calculations depend on the particle size parameter, different techniques were used to obtain the average particle size in the two-phase flow. Author (GRA)

ANALYSIS OF COMBUSTION OF A COMPOSITE PLATE M.S. Thesis
Robert Emmett Luby, Jr. Jun. 1981 77 p refs
(AD-A104852) Avail: NTIS HC A05/MF A01 CSCL 21/2

The combustion of a porous graphite fiber plate is analyzed. A transient one-dimensional, mathematical model is utilized to conduct numerous computer tests. The model simulates the thermal response of a porous graphite fiber plate and it is based on appropriate energy equations. Two of the energy equations are based on energy balances conducted on both the porous structure and on the air within the graphite fibers. The third energy equation is based on a mass balance performed on a differential volume of porous medium. A test plan is formulated and computer test runs are conducted to investigate the effects of plate thickness, filament diameter, permeability, porosity and exterior wind velocity on the thermal response of the porous graphite fiber structure. The test results are analyzed and conclusions are presented. Author (GRA)

(AD-A105394; AFWAL-TR-81-4006) Avail: NTIS HC A03/MF A01 CSCL 07/3

A series of acetylene terminated phenylene (trademark) thermoset systems have been synthesized and their thermal and thermal mechanical properties correlated with molecular structure. The synthesis provided the materials as a mixture of monomer and oligomer. The monomer was separated from the oligomer by means of column chromatography. Their glass transition temperature before and after thermal cure were determined using DSC plus thermomechanical analyses (TMA). The thermal and thermooxidative properties of the materials were evaluated with cured monomers by thermogravimetric analysis and isothermal aging in air, at 600 F. Author (GRA)

CARS SPECTROSCOPY OF GUN PROPELLANT FLAMES

L. E. Harris and M. E. McIlwain Sep. 1981 34 p refs

(AD-A105224; ARLCD-TR-81007) Avail: NTIS HC A03/MF A01 CSCL 14/2

Temperature measurements were made in a slightly fuel rich, premixed, propane/air reference flame and nitrate ester propellant flames burning in air at atmospheric pressure using Coherent Anti-Stokes Raman Scattering (CARS). Both single and multiple-pulse CARS nitrogen spectra in the reference flame agreed with model spectra and the derived temperature agreed with sodium line reversal values. Single pulse CARS nitrogen spectra obtained in the propellant flames were analyzed to give temperatures consistent with the values calculated using the NASA-Lewis thermochemical calculation. Comparison of a 0.1-second separated sequence of single pulse CARS spectra indicated turbulent air mixing in these propellant flames. The results demonstrated that temporal and spatially resolved temperature measurements could be determined in transient, turbulent flames. Author (GRA)

(AD-A105401) Avail: NTIS HC A04/MF A01 CSCL 21/2

The continuation of an experimental flame study concerning the nonphysical processes that lead to soot suppression when water is added to fuel, begun in a previous program is reported. The study included a mapping of temperature, chemical species and soot profiles of laminar diffusion flames with and without water added. Fuels studied included ethylene and a benzene/hydrogen mixture. Flames with nonreactive gases added (argon, nitrogen), were also studied for comparison purposes. The study concludes that the reduction of soot by water in an ethylene diffusion flame can be completely explained by thermal effects. The results are not as definitive for benzene. The addition of water causes a greater reduction in soot than does a thermally equivalent addition of argon, but no noticeable differences in chemical species profiles are observed. There is evidence, however, that water addition causes an increase in concentration of an oxygen-containing tarry substance present in the flame prior to soot formation. During the course of the study it was also possible to estimate both soot particle diameters (1-2 x .000001 cm at the beginning of the oxidation zone) and an activation energy for soot oxidation by the OH radical (7-8 kcal/mole). In addition, it was possible to confirm the presence of and quantify the oxygen concentration in the center of diffusion flames, first reported under the previous program. Author (GRA)

The angle and energy distributions Ni+ ions ejected from ion bombarded Ni(001)c(2/2)-CO are shown to be in excellent agreement with classical trajectory calculations for Ni atoms if the calculations are corrected for the presence of an image force. Two important consequences of this observation are that the ionization probability, R+, is nearly isotropic and that it is only weakly dependent on particle velocity. These constraints impose severe restrictions on proposed ionization theories. Author (GRA)

Our study conducted on the infrared emission of atmospheric atoms and molecules is summarized. In addition, the nitrogen emission study which was conducted in the final phase of the contract is reported. The singlet transition w 1 delta sub u minus a 1 pi sub g, which was partially observed by McFarlane, was fully observed and its band constants were determined. The only vibrational transition detected for the triplet transition W 3 delta sub u minus B 3 pi sub g was the (2-0) band. We failed to detect other members which belong to the same transition. BEHAVIOR OF ALKALI METAL-ACID PHOSPHATES DURING ELEVATED TEMPERATURE WATER ELECTROLYSIS

Margaret Steinbugler 19 Aug. 1981 14 p refs

(Contract W-7405-eng-48)

(DE82-000243; UCID-19192) Avail: NTIS HC A02/MF A01

Use of molten salts containing water as electrolytes for the high temperature (approx. 300 to 4000 C) electrolysis of water is explored as part of a research program on Thermochemical Cycles for the Production of Hydrogen. The purpose of this study is to determine the behavior of the phosphate-based electrolytes KH5 (PO4)2, LiH5 (PO4)2, and NaH5 (PO4)2, during electrolysis. The behavior of these molten salts was observed while measuring the cell potential as a function of time at constant current densities up to 1 A/cm(2) using platinum electrodes. Our experiments demonstrated several important characteristics of the electrolytes. Perhaps the most obvious characteristics is the tendency to dehydrate in an open container. This loss of water increases the potential for any given current and temperature for each electrolyte. This dehydration effect was most pronounced in the sodium- and lithium-based electrolytes, with the potassium-based electrolytes showing a relatively slow dehydration rate. DOE

STUDIES OF FREE RADICALS BY ULTRAVIOLET EXCIMER LASER PHOTOLYSIS Progress Report, 1 Apr. 1981 - 1 Oct. 1981

Stephen R. Leone 1981 29 p refs

(Contract DE-AS02-79ER-10396)

(DE82-000688; DOE/ER-10396/1) Avail: NTIS HC A03/MF A01

The reactions, energy transfer, and dynamics of free radicals produced by ultraviolet laser photolysis are investigated. Free radical chain reactions are analyzed by fully time-resolved techniques involving infrared emission spectroscopy. The low resolution infrared spectrum of the CH3(mu2) cut-of-plane bending vibrational progression is measured. Complex chain reaction chemistry is studied via the laser initiated chain reaction technique to provide a general analysis of the method to obtain rate constants and to probe the time evolution of energy disposal and product formation. Methods to probe very slow chain reactions and to measure absolute rate constants for methyl radical reactions are developed. DOE

FINES RECYCLE MODELING FOR AN ATMOSPHERIC FLUIDIZED-BED COAL COMBUSTOR Final Report

W. L. Brimhall, D. E. Fields, and W. S. Rickman Aug. 1981 66 p refs Sponsored by Electric Power Research Inst.

(EPRI Proj. 1179-6)

(DE81-904223; EPRI-CS-2010) Avail: NTIS HC A04/MF A01

A fine carbon combustion model was modified to predict combustion efficiencies as a function of several process variables in the Babcock and Wilcox (B and W) 6 ft by 6 ft atmospheric fluidized bed coal combustor. The coal fines combustion kinetics were determined using the model and fines recycle test data from the combustor. The overall combustion efficiency was determined as a function of fines recycle rate, supercricial gas velocity, bed depth, freeboard length, and fines reentry temperature. The results of the model indicate that a fines recycle rate of approximately 2.5 times the coal feed rate is required to achieve a 99% combustion efficiency in the combustor using the current operating parameters. DOE

ASSESSMENT OF PULVERIZED-COAL-FIRED COMBUSTOR PERFORMANCE Quarterly Progress Report, 1 Apr. - 30 Jun. 1981

W. Richter, W. Clark, and R. Payne Jul. 1981 28 p refs

(Contract DE-AC22-80PC-30297)

(DE81-030860; DOE/PC-30297/T4; QPR-3) Avail: NTIS HC A03/MF A01

This program is concerned with the provision of a technology base to expedite the conversion of industrial processes from oil and gas to coal and other pulverized fuels. It addresses primarily the impact of fuel type on the thermal performance of a combustor. The program incorporates two experimental tasks and is constructed around an analytical task (Task 1) which will identify and upgrade a family of computer programs required to undertake thermal performance analysis studies. These anaytical tools will thus be used to predict the effects of parameters such as fuel type and furnace variables on combustor performance, and to identify those properties which have a major impact on thermal performance. The second task uses a combustion reactor to screen the key variable identified in Task I and to provide data on the properties of coal particulate matter which affect heat transfer performance. Verification of the engineering analytical approach will be provided by measurements made in a pilot-scale furnace in the third task. Progress is reported. DOE

PALLADIUM-CATALYZED COUPLING REACTIONS: MECHANISM OF REDUCTIVE ELIMINATION Progress Report, 1 Oct. 1980 - 30 Jun. 1981

J. K. Stille Jun. 1981 28 p refs

(Contract DE-AS02-78ER-04903)

(DE81-030169; DOE/ER-04903/3) Avail: NTIS HC A03/MF A01

The mechanisms of the reductive elimination of alkyl partners from palladium, particularly under reaction conditions characteristic of the palladium-catalyzed coupling of organic halides and organometals, can take place either from Pd(II) or Pd(IV). The coupling of alkyl groups from a dialkylpalladium(II) complex requires that the organic partners be to one another. The reaction is a first-order intramolecular process that sometimes requires prior dissociation of a ligand, leading to a Y-or T-shaped intermediate. Coupling also can take place by the prior oxidative addition of organchalide to the dialkylpalladium(II) complex to yield a palladium(IV) species from which reductive elimination takes place rapidly. The reductive elimination step takes place with retention of geometry at an sp(2) carbon, and retention of configuration at an sp(3) carbon. Which catalytic reversible cycle, Pd(0) (FEMALE) Pd(II) or Pd(II) (FEMALE) Pd(IV) operates depends on the organic groups, the ligands and the reaction solvent.DOE

FUNDAMENTAL STUDIES IN CONTINUOUS ANNULAR

CHROMATOGRAPHY
R. J. Torres, C. S. Chang, and H. A. Epstein Sep. 1981 96 p refs Prepared in cooperation with MIT, Oak Ridge, Tenn.
(Contract W-7405-eng-26)
(DE82-000519; ORNL/MIT-329) Avail: NTIS HC A05/MF A01

The effects on separation performance of bed-rotation rate, bed loading, and feed concentrations are investigated using a pressurized continuous chromatograph. Ion-exchange chromatography was used to separate [Ni(NH3) 6-x(H2O)x] (2+), [Co(NH3)4CO3] (+), and [Co(NH3)5CO3] (+) with 1.6 M (NH4)2CO3 of pH 9.0 as eluant. The experimental results are compared with predictions of plate theory and with a theoretical multicomponent chromatography model. Experimentally observed band positions are accurately predicted in the low feed concentration region. The experimentally determined bandwidths, however, are underestimated. A correction to the experimental bandwidths is necessary to account for the discrete nature of the sampling. DOE

INDUCTIVELY COUPLED PLASMA AS AN ION SOURCE FOR THE DETERMINATION OF TRACE ELEMENTS IN SOLUTIONS BY MASS SPECTROMETRY Ph.D. Thesis
Robert Samuel Houk 1980 131 p refs
(Contract W-7405-eng-82)
(DE81-030744; IS-T-898) Avail: NTIS HC A07/MF A01

Aerosols of trace elements in solution are injected into an inductively coupled argon plasma to generate a relatively high number density of positive ions derived from the trace elements. A small fraction of these ions is extracted through a pinhole sampling orifice into a differentially pumped vacuum system housing an ion lens and quadrupole mass spectrometer. The positive ion mass spectrum obtained during nebulization of the solvent (1% HNO3 in H2O) consist essentially of ArH(+), Ar(+), H3O(+), H2O(+), NO(+), O2(+), HO(+), Ar2(+), Ar2H(+), and Ar(+)2. There are few potential interferences from solvent or argon ions above 42 u. The mass spectra of the trace elements studied consists almost entirely of singly charged monatomic (M(+)) or oxide (MO(+)) ions. The various isotopes of those elements studied are detected in the correct relative isotopic abundances. Several trace elements are readily detected in a mass spectrometer scanning mode at 0.05 SIGMA g/mL. Analytical calibration curves obtained in a single ion mode are linear over nearly four orders of magnitude with detection limits of 0.001 to 0.01 SIGMA g/mL for those elements studied. Rapid sample throughput, direct introduction of solutions, and the capability of direct isotopic determination of trace elements are among the features of this analytical approach. DOE

SYNCHRONOUS FLUORESCENCE/MATRIX ISOLATION METHOD FOR TRACE ORGANIC ANALYSIS Progress Report, Jul. 1980 - Jul. 1981
Harry L. Pardue 1981 5 p
(Contract DE-AC02-79EV-10240)
(DE81-030958; DOE/EV-10240/T1) Avail: NTIS HC A02/MF A01

The principal components of the system are a high intensity Xenon arc lamp for excitation, two flat field f/4 spectrographs (J-4 Model UFS-2000) for dispersion of excitation and emission spectra, fused silica cuvette, an image dissector camera system (EMR Photoelectric 658A) for detection of emission intensity, a custom designed and constructed computer interface for scan control and data acquisition, and PDP-8 computer with assorted peripherals. Preliminary data indicate a range of at least 400 nm can be resolved to about 1 -nm for both excitation and emission spectra. Computer interface and software are designed to permit any one of three modes of operation: (1) the diagonal scans required to generate synchronous fluorescence spectra directly; (2) random access to any set of excitation/emission coordinates, and (3) total scans of any selected area (up to 100%) of the complete set of excitation/emission coordinates. The complete system became operational in late 1980. Data for anthracene are presented to illustrate system response. DOE

COAL COMBUSTION IN HIGH CONVECTIVE FLOWS Progress Report, 1 Mar. - 31 Aug. 1981
Kenneth W. Ragland 8 Sep. 1981 6 p
(Contract DE-FG22-80PC-30213)
(DE81-030391; DOE/PC-30213/T1) Avail: NTIS HC A02/MF A01

Fundamental data on ignition delay, volatile burn time, volatile reactivity, char burn time, char reactivity, aerodynamic drag, particle surface temperature, and internal porosity of burning coal particle are being obtained as a function of coal type, particle size, gas temperature, gas velocity and oxygen concentration. Simulation of conditions inside a furnace has been achieved in two test rigs which have been constructed. In the first rig single coal particle 3 to 12 mm diameter are suspended on a 0.02 mm diameter stainless steel wire which extends from an electronic balance into a 5 mm diameter tube containing flowing electrically heated gas. This setup extends the traditional thermogravimetric analysis to flowing systems. In the second rig coal particles are levitated freely in a 50 mm diameter diverging insulated quartz nozzle. To data 16 fixed particle test runs have been made-7 with a Kentucky bituminous coal, 3 with a Montana sub-bituminous and 6 with a Texas lignite. Gas temperture ranged from 760 to 11400K, flow rates 2 to 11 scfm, gas-particle velocities from 1.8 to 10.4 m/s, and Reynolds numbers from 100 to 1150. DOE

EFFECTS OF PREIGNITION ON PULVERIZED COAL COMBUSTION Quarterly Report, 1 Apr. - 30 Jun. 1981
Girard A. Simons and G. Kothandaraman Sep. 1981 66 p refs
(Contract DE-AC22-80PC-30293)
(DE81-030170; DOE/PC-30293/3; QR-3) Avail: NTIS HC A04/MF A01

A continous branching description of the pore tree has been developed. The pores branch in a continuous downsizing manner. The theory predicts that the total surface area of each tree may be several orders of magnitude greater than the surface area of the tree trunk. The total volume of the pore tree may be one order of magnitude greater than that of the trunk and the total height of the tree may be as much as 30 times the trunk diameter. All expressions for the size and shape of the pore tree reduce to that describing a single isolated pore in the limit that the trunk radius approaches the minimum pore radius. While the above description of the pore tree is consistent with the actual structure of a common shade tree, the features of the pore tree may best be verified through its transport properties. Char oxidation is shown to be sensitive to the structure of the pore tree. The continuous branching model developed herein accurately reproduces the kinetic and diffusion solutions which were utilized in developing the transport model. The validation of the transport model in describing char oxidation indirectly verifies the continuous branching description of the pore tree. DOE

PYROLYSIS OF COAL-DRIVED FUELS USING THE LASER-

POWERED HOMOGENEOUS PYROLYSIS TECHNIQUE Technical Progress Report, 5 Aug. 1980 - 31 Jul. 1981
P. C. T. deBoer 31 Jul. 1981 19 p refs
(Contract DE-FG22-80PC-30217)
(DE82-000251; DOE/PC-30217/T2) Avail: NTIS
HC A02/MF A01

The progress made can be divided into two areas: theoretical work leading to an accurate computation of the temperature and velocity fields in the sample cell; and experimental work studying various chemical reactions involving hydrocarbons. The laser-powered homogeneous pyrolysis (LPHP) technique was applied to the unimolecular decomposition of 1,4-cyclohexandiene to benzene and hydrogen and of 1-chloropropane (n-propylchloride) to propene and hydrogen chloride as well as to the isomerization of cis-2-butene to trans-2-butent. These reactions proceed in different temperature ranges, with reaction rates that are well known. The temperature range covered is 575 to 8500K. The objective of this investigation was to establish proper operation of the LHLP technique over the temperature range of interest for the pyrolysis of coal-derived hydrocarbons. A set of equations was derived describing the motion of the strongly heated gas in the sample cell. The equations take account of the variations of viscosity and thermal conductivity with temperature, as well as of the dependence of the radiation absorption coefficient on temperature and density. DOE

HC A05/MF A01

In late 1979 the Pittsburgh and Midway Coal Mining Co., recommended to the Department of Energy that certain areas of the SRC Pilot Plant should be modified to represent the SRC-II Demonstration Plant design. The proposed modifications were for design confirmation; start-up, transient and other operational guidance studies; and training of operator and professional personnel. The pilot plant facilities proposed for modification were: Coal Slurry Mixing - Area 01; Dissolver Effluent Cooling and Seperation - Area 02; and Vacuum Flash/Residue Pump Testing - Area 04. A summary justification assessment for the modifications is included. A preliminary engineering study by Badger Energy, Inc. was completed in late 1980. A proposed to begin detailed engineering had been submitted to DOE for approval when all work was discontinued at the direction of the DOE in April 1981. DOE

HC A03/MF A01

Two runs of more than 100 hours of catalyst life were completed using SRC-I and SRC-II as the feeds. One run had catalyst regeneration every three hours, the other every eight hours. The catalyst, 4% CoO, 8% MoO_3, 1% NiO and 8% WO_3 on NALCO-78-600BC alumina base, reduced the nitrogen content to less than 0.3% showed no signs of deterioration in activity. Regeneration after the three or eight hour periods was by burnoff with oxygen in nitrogen followed by re-sulfiding with H_2S in hydrogen. The liquid yield from SRC was 90% of which 30% was 50 to 2040C boiling range gasoline. It appears that a viable process to convert SRC into a feedstock acceptable to a petroleum refinery was discovered. A study of the effect of carbon laydown on pore volume and subsequent deactivation of the catalyst was carried out in a pressurized batch reactor. Little reduction in pore volume was noted. Three commerical catalysts, Harshaw HT400, NALCO MO477 and NALCO MN502, were evaluated with SRC-II. DOE

HC A08/MF A01

To facilitate by-product recovery and eliminate elemental sulfur formation in coal oxydesulfuirization, high-sulfur bituminous coal has been treated with aqueous ferric sulfate/sulfuric acid and oxygen at 100 to 1500C. The rate of pyrite oxidation increases with oxygen partial pressure, temperature, and fitness of grinding. This reaction rate is relatively insensitive to sulfuric acid and ferric sulfate concentrations, so that pyrite removal may be satisfactorily performed in solutions containing 25% H_2SO_4 and 12% $Fe_2(SO_4)_3$ (weight percentages relative to total H_2O plus $HsSO_4$); preliminary data suggest that such a leaching solution is only mildly corrosive to T316 stainless steel, at 1500C or below, in the presence of oxygen. To provide an accurate assessment of coal oxydesulfurization stoichiometry, and analytical technique based on uv spectrophotometry has been developed for the determination of elemental sulfur in coal. Prepared coal samples are extracted for 24 hours with cyclohexane. Other exploratory oxydesulfurization runs have shown that vanadium oxides are not effective catalysts at 1000C, with oxygen. DOE

HC A08/MF A01

Subprocess taking place during an in situ combustion retorting of oil shale were investigated. Some of these subprocesses also occur in a surface retorting process. The specific topics of this research program include: (1) experimental determination of the intrinsic kinetics of kerogen decomposition producing oil; (2) mathematical formulation of the retorting of a oil shale block in the presence of heat transfer effects; (3) experimental determination of the intrinsic kinetics of oil shale char oxidation; (4) mathematical modeling of the oxidation of oil shale char in a spent shale block in the presence of heat and mass transfer effects; (5) determination of ignition delay and energy requirements for the ignition of an oil shale bed; (6) determination of thermal expansion of oil shale; and (7) determination of heat capacities of oil shale and the heat of decomposition of kerogen. The results of the investigation of these topics are presented. Some of the results have been published in journals which are readily available. In such a case only a brief summary of the results are presented. DOE

DEHYDROGENATION/HYDROGENATION REACTIONS IN HYDROAROMATIC SYSTEMS
T. Gangwer 1981 6 p refs Presented at the Intern. Conf. on Coal Sci., Dusseldorf, West Germany, 7 Sep. 1981
(Contract DE-AC02-76CH-00016)
(DE81-027667; BNL-29825; CONF-810914-3) Avail: NTIS
HC A02/MF A01

The basic chemistry of donor solvent dehydrogenation/hydrogenation process is an important component of liquefaction. Kinetic and mechanistic work on the hydroaromatic donors: tetralin (T), 1,2-dihydronapthalene (DN) and 9,10-dihydroanthracene (DA) is yielding insight into this chemistry. The chemical reactions are found to be heterogeneously controlled. The composition of product mixtures are sensitive to the initial density of the hydroaromatic reactant. As reactant density increases, the tetralin product mix changes. Reaction mechanisms are proposed which describe the observed processes in terms of reversible heterogeneous site reactions. A general reaction mechanism was developed which describes the observed reactant/product sequences. Conclusions are as follows: reactions of hydroaromatic systems can be modeled using the proposed heterogeneous reaction mechanism; dihydro-reactants can react along more than one pathway; and the extent of reaction is a

function of the hydrogen content of the heterogeneous surface.

Thick oxide layers grown electrochemically on Rh, Ir, Ru and their alloys exhibit electrocatalytic properties associated with an internal redox process. For simple faradiac processes at the Rh/Rh oxide electrode it is shown that the rates of charge transfer and transport depend critically on the interaction between the redox couples in solution and in the oxide at the oxide electrolyte interface. The phenomenon of anodic activation found for the o.e.r. at Ru and Ru alloys is shown to be associated with film growth (monitored optically) and with the enhancement of the internal redox activity in the oxide. REMOVAL OF NITRATES FROM GROUND WATERS BY REVERSE OSMOSIS Final Report
Robert Rautenbach and Karl-Heinz Henne Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 56 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-155; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 11,80

A concept for hybrid ground water processing is presented, which makes it possible to economically reduce the content of nitrates to the allowable limit (50 ppm) while simultaneously reducing the total salt content, and to harmlessly dispose of the concentrated brine. A pilot plant (18 cum/hr drinking water) as well as a large capacity plant (360 cum/hr) were layed out and the total expected drinking water cost was calculated. After detailed engineering studies of the parameters, it was concluded that: (1) reverse osmosis (RO) is the most economical process for removing nitrates from ground water; yields of up to 91.5 % are possible; (2) agricultural utilization of the RO brine is not possible; and (3) considering operational and economical aspects, the modified process of multistage evaporation by expansion with a liquid circulating heat carrier is best compared with a multi-effect falling-film-evaporator seeding process, when directly evaporating the RO brine. However, this two stage hybrid process with an additional drinking water cost of 1.40 DM/cum is too costly. A more economical alternative for the discharge of the RO brine is a process consisting of: softening, electrodialysis and evaporation. Author (ESA)

A preliminary treatment of the used catalysts following fluidized bed thermal processing is presented. It is possible to obtain a starting material free from organic impurities, which is suited to the usual recovery of the valuable components of the catalysts. In the course of the operation optimization, it was possible to successfully complete the feeding of the fluidized bed reactor with used catalysts from widely varying sources. The waste gas purification and fine dust separation comply with emission regulations. The unit is to be regarded as a demonstration plant, especially if waste heat utilization can be integrated to improve economic performance. Author (ESA)

MEASUREMENT PROCEDURE TO DETERMINE ORGANIC COMPOUNDS IN WATER (COMBUSTION METHOD) Final Report
Rainer Berthold, Gerold Gamer, Rudolf Krapf, Rainer Strietzel, and Karl Reiss Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 47 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-014; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9,70

A procedure and an apparatus for measuring the content of organic compounds in water and providing a measured value correlating to the chemical oxygen demand are described. They provide cheap and reliable waste water analysis. The signal can be understood as a displacement of the equilibrium of the thermal dissociation of water (vapor) under the influence of organic (reducing) compounds. Contrary to the conventional technique, the procedure works without dosing of oxygen or carrier gas and continuously gives a measurement signal. It is therefore possible to realize on this basis an uncomplicated process measuring device, providing reproducible results. Author (ESA)

THE INFLUENCE OF DEFORMATION MODE DURING COLD FORMING ON THE POST-FORMED FLOW AND FRACTURE BEHAVIOR OF LOW CARBON AND HIGH STRENGTH LOW ALLOY STEEL SHEETS Ph.D. Thesis
Philippe Lucien Pascal Charpentier 1981 412 p
Avail: Univ. Microfilms Order No. 8114626

The influence of mode and amount of deformation during sheet formins on post formed flow and fracture behavior is studied in two hot rolled vanadium nitrogen high strength low alloy steels (an 80 ksi yield strength ferrite pearlite steel, and a dual phase steel) and in a hot rolled aluminum killed low carbon steel. Five modes of prior deformation are investigated: inplane balanced biaxial stretching, plane strain deformation (cold rolling), uniaxial tension, cup drawing, and inplane compression, a laboratory forming technique developed to produce a drawing type deformation essentially free from strain gradients. The post formed yield strength was approximately given by the isotropic effective stress effective strain relationship after balanced biaxial stretching and cold rolling. However, after the three other deformation modes this result only applies in the direction of the positive (tensile) surface strain. Dissert. Abstr.

THERMOTRANSPORT OF HYDROGEN AND DEUTERIUM IN VANADIUM, NIOBIUM AND TANTALUM ALLOYS Ph.D. Thesis

Mark Francis Smith 1981 75 p

Avail: Univ. Microfilms Order No. 8122504

A mass spectrometric technique was used to simulataneously measure heats of transport for hydrogen and deuterium in single specimens of pure vanadium, niobium and tantalum, in vanadium alloyed with either niobium, titanium or chromium; and in niobium tantalum alloys. This technique greatly increased the precision with which isotope effects in the heat of transport could be measured. The predominant effect of alloying was to dramatically increase thermotransport, however, thermotransport decreased as niobium was added to tantalum. The heat of transport did not vary greater at low concentrations of the substitutional element. Heats of transport for hydrogen in pure vanadium, niobium and tantalum are 1.4, 11.9 and 28.5 kJ/mol, respectively and corresponding values for deuterium are 4.8, 18.0 and 34.8 kJ/mol. Dissert. Abstr.

STRUCTURE: PROPERTY RELATIONSHIPS IN GOLD BASED SLIDING ELECTRICAL CONTACT MATERIALS Ph.D. Thesis

Jaydev D. Desai 1981 309 p

Avail: Univ. Microfilms Order No. 8121142

Directionally solidified and chill cast two phase Au-Co and Au-Si alloys with a hard and insoluble second phase, and rapidly quenched (splat cooled) Au-Si alloys with simple phase amorphous and/or crystalline microstructures were examined from the standpoint of electrical resistivity, electrical noise, and wear resistance. The splat cooled alloys with their single phase amorphous and/or crystalline microstructures exhibited the highest wear resistance (as compared to the two phase Au-Si alloys with similar hardness), due to none or only a few crack nucleation sites, which is consistent with the delamination of wear. No discernable difference was found in the electrical noise performance of the DS eutectic Au-Co alloys as a function of the growth rate, which may be due to their similarity in electrical resistivities. The Au-Si alloy exhibited higher electrical noise than the Au-Co alloy in presence of isopropyl alcohol. Dissert. Abstr.

EXPERIMENTAL INVESTIGATION OF THE INFLUENCE OF HIGH POWER ULTRASOUND ON METALS Ph.D. Thesis

Richard Blase Mignogna 1981 127 p

Avail: Univ. Microfilms Order No. 8120040

The three most prevalent mechanisms proposed to account for the observed softening effects are simple superposition of the dynamic high power ultrasonic stress on the quasistatic stress, heating of the specimen caused by the applied waves with dislocations in localized regions of the test specimen. A decrease in the Young's modulus of the material during insonation is also suggested. A multiparameter experimental system was developed which permits simultaneous measurement of sufficient quantities to test all of the proposed mechanisms causing the softening effect. The results indicate that a combination of superposition of the dynamic stress on the quasistatic stress and interaction of the high power ultrasonic waves with dislocation is responsible for the softening. Dissert. Abstr.

N82-12212 Vanderbilt Univ., Nashville, Tenn.

INVESTIGATION OF THE ELECTROCHEMICAL BEHAVIOR OF ION-IMPLANTED Ti-Pt ALLOYS Ph.D. Thesis

Neil Garnett Thompson 1981 166 p

Avail: Univ. Microfilms Order No. 8120220

The corrosion behavior of Ti-Pt alloys were examined. Near-surface alloys of approximately 100 nm in depth were produced by the acceleration and penetration of the Pt ions into a Ti substrate. The near-surface alloys have a gaussian Pt concentration distribution. A combination of electrochemical examination and Rutherford backscattering analysis provided a means of quantitatively determining parameters which characterize the mechanisms involved in the dissolution of Ti-Pt alloys. The corrosion behavior of Ti-Pt alloys were examined in hydrogen saturated 1NH2SO4 at 30 C. High purity, cold fabricated Ti was employed for this study. The pure Ti samples were thoroughly examined electrochemically prior to implantation. Both, open-circuit potential and potentiostatic polarization measurements were used to characterize the implanted samples. Rutherford backscattering analysis (a non-destructive, quantitative determination of the Pt concentration depth distribution) was performed prior to, and at the completion of electrochemical examination. Dissert. Abstr.

N82-12213 Pennsylvania State Univ., University Park.

FRACTURE OF MAGNESIUM ALUMINATE SPINEL Ph.D. Thesis

Ronald Leroy Stewart 1981 158 p

Avail: Univ. Microfilms Order No. 8120467

The fracture toughness or K sub ic of magnesium aluminate spinel was measured as a function of orientation for single crystals, and for different grain sizes and stoichiometry (Al2O3 rich) for polycrystalline material. Measurements were made in air as a function of temperature to 1500 C. The single crystals of MgAl2O4 were measured in three different orientations having fracture planes of h/111/, and /110/. The /100/ orientation was also examined, at elevated temperatures, as a function of stressing rate. Hot-pressed stoichiometric polycrystalline MgAl2O4 was measured as a function of grain size over the range of 5 to 38 microns. Hot-pressed aluminia-rich super saturated spinel solid solutions were measured as a function of stoichiometry at the composition ratios of 1MgO:1.25Al2O3, 1MgO:1.50Al2O3, 1MgO:1.75Al2O3, 1MgO:2.00Al2O3, and 1MgO:2.50Al2O3, each at a grain size of approximately 35 microns. Dissert. Abstr.

N82-12214 Pennsylvania State Univ., University Park.

A PHENOMENOLOGICAL THEORY FOR PREDICTING THE TEMPERATURE DEPENDENCE OF ELASTIC COMPLIANCE IN SIMPLE PROPER FERROELECTRIC TUNGSTENBRONZES Ph.D. Thesis

Thomas Richard Shrout 1981 171 p

Avail: Univ. Microfilms Order No. 8120465

The Landau-Ginsburgh-Devonshire phenomenological theory for simple proper ferroelectrics was extended to include all elastoelectric coupling terms up to sixth order. For the tetragonal ferroelectric bronze Sr(0.61)Ba(0.39)Nb2O6 direct measurements by induced piezoelectric resonance in the paraelectric phase clearly showed a coupling between the stiffened elastic compliances on induced electric polarization in a manner consistent with that predicted from the sixth order electrostriction. The sixth order electrostriction (phi) constants were used to predict the elastic behavior in the spontaneously polarized ferroelectric phase region. The observed behavior of the phi constants was consistent with other higher order constants being only weakly temperature dependent and thus likely also compositionally independent. The phenomenological method does permit the correlation of low

temperature data in the ferroelectric phase with a limited family of temperature independent higher order constants of the simpler paraelectric symmetry and with accumulating experience

GRAVITATIONAL INFLUENCE ON BINARY ALLOY MELT EQUILIBRIA AND EUTECTIC SOLIDIFICATION Ph.D. Thesis
Robert Stanley Sokolowski 1981 174 p
Avail: Univ Microfilms Order No. 8121164

A high-temperature ultracentrifuge was developed from the concept of a compact, low cost, air-turbine. The equation governing sedimentation equilibrium in homogeneous liquid binary alloys is derived in differential form by defining a gravochemical potential, which includes inertial terms in addition to the usual chemical potential. The resulting first order non-liner ordinary differential equation is solved and the results are presented graphically. Microstructures of Pb-Sn and Bi-Sn eutectic alloys are presented as experimental evidence supporting the numerical results and refuting conflicting data found in the literature on clustering liquid alloys. These results are discussed with regard to the nucleation behavior of alloys and solidification fluid dynamics. A series of eutectic alloys, mainly Pb-Sn and Bi-Sn were solidified under centrifuged fields. The unique behavior of alloy solidification at high levels of acceleration is revealed by numerous microstructural data which are discussed and interpreted. Dissert Abstr

The structure and corrosion performance of nickel-aluminium bronze (NAB)--covered by naval specification DGS-8520 and DGS-348--have been investigated. No evidence was found to suggest that there would be any significant difference in corrosion performance between alloys meeting the two specifications. Early corrosion problems associated with the weld repair areas of castings have been overcome largely by using improved foundry and welding techniques followed by a heat-treatment procedure. Both crevice and pit corrosion still occur in operating systems. However, recent reports indicate that with improved NAB foundry practice this is less widespread, with penetration often being confined to the surface grains. Author (GRA)

Processing-microstructure-fatigue relationships have been examined in high-strength powder metallurgy aluminum alloys (Al-Cu, Mg, Zn, Co) in air and salt fog. Three phases were included: (i) The combined effects of cobalt level and processing mode on fatigue life and resistance to crack propagation; (ii) The role of plane-strain forging on fatigue life and crack propagation response; (iii) The combined effects of cobalt level and processing mode on strain-controlled low-cycle fatigue. While the interplay between processing history, alloy composition and orientation is complex, a basic understanding of the role of microstructure on the crack initiation and propagation stages of fatigue has been obtained. Direct comparisons of the corresponding fatigue response of counterpart ingot metallurgy alloys were included. In general, the P/M processed material exhibits superior resistance to fatigue crack initiation compared to the I/M form. However the relative crack growth rates in the P/M and to the I/M form. However the relative crack growth rates in the P/M and I/M materials depend on orientation and the level of delta K. Author (GRA)

The projected use of lithium-lead alloys as the tritium breeding blanket and heat transfer agent in fusion reactors requires data on the solubility of hydrogen isotopes in the alloys at the temperatures of interest. In the absence of available experimental data in the desired temperature range, estimates were made on the hydrogen isotope solubility in the lithium-lead alloys. In NUMAK, solubility estimates were based on activity studies of lithium in lithium-lead while in WITAMIR the solubility was extrapolated from deuterium measurements in the alloy at higher temperatures. Existing data are summarized and methods of estimating the tritium solubility in the desired temperature range are reviewed. DOE

M. G. Ulitchny Sep. 1981 13 p ref
(Contract DE-AC04-76DP-00613)

(DE82-030693; BDX-613-2680) Avail: NTIS HC A02/MF A01

Cast and hot isostatically pressed Ti-6Al-4V and Ti-6Al-6V-2Sn alloys were tested for mechanical properties. Specimens from these alloys were tested in as received, mill annealed, and solution treated and aged conditions. Results show that tensile strength at least equal to the quaranteed minimum for wrought titanium can be developed using solution treat and age heat treatments. The fracture toughness associated with this strength level is adequate, but tensile ductility is usually less than the desired 10 percent level. Development of modified heat treatments would likely lead to increase in ductility and would extend the uses of titanium alloy castings. DOE

THERMAL DESORPTION SPECTRA, EQUILIBRIUM DESORPTION RATES AND EQUILIBRIUM SURFACE COVERAGES OF MECHANICALLY POLISHED AND OF SAND AND BEAD BLASTED INCONEL 600 SURFACES

J. Camposilvan and F. Reiter 1980 44 p refs Submitted for publication

(EUR-7114-EN) Avail: NTIS HC A03/MF A01

Equilibrium surface coverage and equilibrium outgassing rate of materials facing the plasma in fusion technology are studied. Inconel 600 surfaces were examined in the temperature range from 20 to 550C. The first sample was mechanically polished and had a total hemispherical emissivity at low temperatures Epsilon = 0.146 and a surface roughness CLA1 = 0.08 microns while the second sample was sand and bead blasted with Epsilon = 0.382 and CLA2 = 1.2 microns. FATIGUE PHENOMENA IN COPPER

Kurt Viggo Rasmussen Sep. 1980 81 p refs In DANISH; ENGLISH summary

(Riso-M2241; ISBN-87-550-0703-1; ISSN-0418-6435) Avail: NTIS HC A05/MF A01

The relevant literature on low amplitude fatigue in single crystals and polycrystals is briefly reviewed. Results of experiments are shown. Single crystals and polycrystals of pure copper were fatigued in tension-compression at constant low amplitudes of plastic strain and low cycling frequencies at room temperature in air. Surface patterns of persistent edge dislocations were quantitatively examined by optical microscopy. Bulk dislocation microstructures were examined by transmission electron microscopy. The microstructure and mechanical behavior observed for the single crystals are in close quantitative agreement with comparable existing fatigue data. The cyclic stress-strain diagram of the polycrystals shows a plateau in a linear plot. The area fraction of edge dislocations on the polycrystals increases roughly linearly with the plastic strain amplitude. The dislocation microstructure in bulk grains consist of regular wall structures embedded in a matrix of less regular structures. Author (ESA)

SUBSTITUTING COPPER ALLOY TUBES IN OLD SEA WATER CONDENSERS

Pertti Auerkari 1981 34 p refs In FINNISH; ENGLISH summary

(VTT-87; ISBN-951-38-1211-1; ISSN-0355-6395) Avail: NTIS HC A03/MF A01

The use of chromium alloyed copper nickels (CACN), titanium, and stainless steels to replace copper alloys in sea water condensers is discussed. The corrosion resistance of titanium tubes is good at normal temperatures, but because of vibration problems, they are suitable only if the distance between the supporting plates can be reduced. When stainless steels are used the former support plate distance is normally sufficient. With both titanium and stainless steel retubing, care should be taken to achieve tight and leak free joints, good in service cleaning, and reliable corrosion protection of the end plates and other condenser parts that are in contact with the substituting tubes. MICROSTRUCTURE FORMATION IN THE Au-SiO2 CERMET DURING ANNEALING Ph.D. Thesis

Joseph Thomas McGinn 1981 219 p

Avail: Univ. Microfilms Order No. 8122101

The microstructure of Au-SiO2 cermet films was characterized as a function of both annealing time and Au concentrtion. Results indicate that the cermet forms a two phase system with discrete prticles of Au surrounded by a SiO2 matrix. With annealing, the Au particles both decrease in number and increase in size. The growth mechanism is shown to be a complex combination of Ostwald ripening and particle coalescence. The microstructure of the individual Au particles exhibits a variety of well ordered boundary structures. These boundaries are shown to be separate twin related grains and to result from particle-particle coalescence and subsequent grain boundary migration. The simple boundary structures which are observed in these particles makes it possible to distinguish between 'growth accident' and 'pop-out' models of annealing twin formation. The theory of annealing twin formation is extended to account for the explicit nature of the twin boundaries observed. Dissert. Abstr.

MOLECULAR ORIENTATION IN POLYMERS: A STUDY OF HOT-DRAWN POLYMETHYLMETHACRYLATE Ph.D. Thesis

Jay Scott Rosenthal 1981 287 p refs

Avail: Univ. Microfilms Order No. 8121159

Using hot-drawn polymethylmethacrylate as the particular material for investigation, a number of different aspects of orientation were examined. The parameters employed to characterize orientation are investigated in order to resolve the present controversy regarding the characterization of orientation. Also the relationship between the draw process, the orientation state, and mechanical properties is explored. These investigations are related to a third aspect of the orientation process which is concerned with the rheology of the polymer. This involves the concepts of a spectrum of rheological events describing the process of deformation and orientation. The results reported for when the material is drawn at constant draw rate and cooled or drawn at constant draw rate, relaxed and then cooled agree quantitatively with the predictions of the draw model, thus confirming the concept of a disentanglement spectrum. THE EFFECT OF PRESSURE ON THE PHYSICAL AND MECHANICAL PROPERTIES OF SOLITHANE 113 ELASTOMER Ph.D. Thesis

David Lee Questad 1981 156 p

Avail: Univ. Microfilms Order No. 8122116

Pressure-volume-temperature measurements of Solithane 13, a polyurethane elastomer, showed that the glass transition temperature increased linearly for pressures up to about 2.5kbar, and then nonlinearly with pressure up to more than 6kbar. The change in thermal expansivity decreased rapidly with pressure at low pressures. The specific volume in the glassy state was shown to depend on the glass formation pressure. Plotting the

dielectric data as an activation plot show that the activation energy at a certain frequency is independent of pressure. Ultrasonic longitudinal velocity measurements show a broad step decrease in the region of the attenuation maxima as the temperature was raised at each isobar. Stress strain measurements show that recovery of plastic strain is pressure dependent, and that the strain of fracture increases with increasing pressure.

APPLICATION OF HIGH PRESSURES TO CERAMICS Interim Report
R. W. Rice 13 Oct. 1981 14 p refs
(RR0220242)
(AD-A105249; NRL-4637) Avail: NTIS HC A02/MF A01 CSCL 11/2

The use of pressure, an important variable in the study and especially the processing of ceramics, is first briefly reviewed showing that most pressures used are well below the high pressure range. Three areas of high pressure studies of ceramics that can be important in understanding ceramic behavior and can also be useful in specialized ceramic processing are then briefly outlined: compaction of powder or porous bodies, phase conversion (often with consolidation), and plastic deformation. Formation and consolidation of diamond and cubic BN are only briefly noted since they are extensively addressed elsewhere. It is shown that powder outgassing can be an important problem for some of these processes. Particular attention is given to impact or shock treatment, especially compaction of powders, and to hot extrusion of ceramics, including conventional as well as hydrostatic extrusion. Next, possible future application of high pressure to processing of ceramics is addressed. Explosive compaction of ceramics, especially of certain tougher ceramic composites wherein a synergism may be effective is suggested. Then the past and potential application of high pressure in mechanically working and shaping ceramics is discussed, again in part focused on processing tougher ceramic composites.

ORIENTATION MEASUREMENTS FROM POLYMER SURFACES USING FOURIER TRANSFORM INFRARED PHOTOACOUSTIC SPECTROSCOPY
K. Krishnan, S. Hill, J. P. Hobbs, and C. S. P. Sung Sep. 1981 18 p refs
(Contract N00014-78-C-0676)
(AD-A105398; TR-4) Avail: NTIS HC A02/MF A01 CSCL 11/9

Fourier Transform IR Photoacoustic (FTIR-PAS) dichroism studies have been applied to determine molecular orientation from the surface of one-way drawn poly(ethylene terephthalate) film. When compared with ATR dichroic spectra obtained with a modified, rotatable sample holder on the same sample, PA spectra show saturation effects in strong absorption bands near 1730, 1250 and 1100/cm, probably due to the greater penetration depth in the PA technique. The dichroic ratios (k sub x/k sub y) on the plane of the sample film have been calculated from PA spectra, only on bands which do not show saturation and compared with the analogous ratios determined from ATR dichroic spectra. For three well-known parallel bands at 1335, 975 and 795/cm the dichroic ratio is greater than unity in both ATR and PAS, as expected from the drawing process. In general, somewhat lower dichroic ratios are observed by PA spectra than by ATR spectra with this sample. Possible reasons for this trend are discussed. This study demonstrates the potential of FTIR-PAS dichroism as a complementary technique to ATR dichroism, especially on samples with rough or brittle surfaces.

PAINT SELECTION FOR COATING RADIOACTIVE-WASTE DRUMS
J. L. Briggs 1 Jul. 1980 22 p refs Presented at ASTM Rockwell Intern. Corrosion Conf., Nashville, 23 Jun. 1981
(Contract DE-AC04-76DP-03533)
(DE81-026259; RFP-3119) Avail: NTIS HC A02/MF A01

White epoxy paint sample E is suitable for coating waste drums, but the additional pretreated costs of grit blasting prior to paint application precludes adoption of that paint system. The specified 10.0 mil coating thickness of that coating also incurs higher costs. The Vorac epoxy phenolic base paint (buff or yellow) is the only other paint that exhibits suitable corrosion and impact resistance required for coating the waste drums. In addition, that paint does not require a grit blasted substrate or other costly pretreatment prior to coating. DOE

A NON-LINEAR MODEL FOR LOW VELOCITY UNDERWATER EXPLOSIONS Ph.D. Thesis
Mark Albert Dablain 1980 223 p
Avail: Univ. Microfilms Order No. 8120607

The theory and computed results of an explosion model based upon a perturbation technique are presented. The perturbation parameter was selected to be the ratio of the initial particle velocity to the liquid sound speed. The explosion model is studied in conjunction with the air-gun source of seismic marine exploration. The distinction between this model and past models is the preservation of wave propagation interior to the sphere. Although the effects of these interior waves seem to be negligible for explosion sources with high initial velocities, their interaction with the gas-liquid boundary seem to significantly affect the expansion of bubbles from the low velocity air-gun source. The theory indicates that during bubble growth the bubble surface expands toward its equilibrium radius while oscillating about intermediate points during the whole course of its motion. Although direct and clear observational data seem to be lacking, the data which are available lend support to this idea.

PARTIAL ACID HYDROLYSIS PRETREATMENT FOR ENZYMATIC HYDROLYSIS OF CELLULOSE: A PROCESS DEVELOPMENT STUDY OF ETHANOL PRODUCTION Ph.D. Thesis

Diane Ruth Knappert 1981 175 p
Avail: Univ. Microfilms Order No. 8121523

Cellulosic substrates (poplar, corn stover and bagasse) were pretreated in a continuous, plug flow reactor at conditions of 160-220 C, 0-1.5% acid, and retention times up to 13 seconds. The pretreated material was then hydrolyzed with Trichoderma reesei C30 cellulase, for 48 hours. Glucose concentrations were measured during the 48 hours of hydrolysis, and results are compared to those from controls, hydrolysis of untreated material. Results show a significant increase in glucose yields after pretreatment. For example, after pretreatment, glucose yields from hydrolysis of poplar as high as 75% are obtained, compared to 20% yields from hydrolysis of untreated poplar. Successful pretreatments are found to solubilize about 40% of the poplar hemicellulose. The cost of producing ethanol using a 10 MM gal/yr plant size are evaluated, and the process is scaled up to a 50 MM gal/yr plant.

THE STABILIZATION OF COAL-OIL MIXTURES Ph.D. Thesis

Mary Adams Viola 1981 501 p
Avail: Univ. Microfilms Order No. 8121367

An understanding was developed of the stabilization by three methods: the addition of water; the addition of chemical additives; and the control of the particle size distribution (PSD) of the coal (so-called ultrafine COM). Aggregation of the coal particles was determined to control both the sedimentation and rheological properties of the COM. The degree of coal particle aggregation depends upon the nature and PSD of the coal powder, on the nature of the oil used, and the use of chemical additives, such as water and/or surfactants.

SOLID-SOLID REACTIONS IN COAL CONVERSION PROCESSES Ph.D. Thesis

Danial Clark Baker 1981 198 p
Avail: Univ. Microfilms Order No. 8120902

The thermal stability of calcium sulfate and sulfated coal ashes was studied as well as the catalytic effect of metal carbonates on coal char gasfication. Five model reactions which could result in undesirable evolution of sulfur oxides are considered: decomposition of pure CaSO4 between 950 C - 1130 C; decomposition of CaSO4 in the presence of thin film melts of KCl and NaCl at 1020 C; reactions of CaSO4 with metal oxides in binary systems at 1020 C; reactions of CaSO4 with aluminosilicates in multicomponent systems at 1020 C; and decomposition of sulfated coal and lignite ashes at 820 C and 1020 C. Metal carbonates did not change the mechanism of char gasification when CO2 was the reactive gas. It was noted that reactions of the solid-solid complex with silicates and aluminosilicates in the ash of the char can result in loss of catalytic activity and poor catalyst recovery.

HYDRODESULFURIZATION OF CHLORINATED COAL Patent Application

John J. Kalvinskas (JPL, California Inst. of Technology, Pasadena) and Naresh K. Rohatgi, inventors (to NASA) (JPL, California Inst. of Technology, Pasadena) Filed 30 Oct. 1981 24 p
(Contract NAS7-100)
(NASA-Case-NPO-15304-1; US-Patent-Appl-SN-315587) Avail: NTIS HC A02/MF A01 CSCL 21D

A method of desulfurization is described in which high sulfur coals are desulfurized by low temperature chlorinolysis of coal in liquid media, preferably water, followed by hydrodesulfurization at a temperature above 500 C. The coals are desulfurized to an extent of up to 90% by weight and simultaneously dechlorinated to a chlorine content below 0.1% by weight. The product coals have lower volatile loss, lower oxygen and nitrogen content and higher fixed carbon than raw coals treated with hydrogen under the same conditions. Heating the chlorinated coal to a temperature above 500 C in inert gas such as nitrogen results in significantly less desulfurization.

Methane fermentation of industrial wastes offers the dual potential of pollution abatement and energy conservation. This report presents results of experiments designed to investigate the effects of toxic substances on methane bacteria. Toxicants studied were calcium, cadmium, chromium, nickel, sulfide, chloroform, dichloroethylene, trichloroethylene, ethyl benzene, cationic surfactants, gasoline, jet fuel, and hydrazine. The effect of toxicant concentration, solids retention time, and temperature on methanogenic response, acclimation, and reversibility was studied. Experiments included slug and continuous addition of toxicants.

Investigation of mechanisms of combustion and combustion zone microstructure continued, using ammonium perchlorate-hydro-carbon binder sandwiches and the quench-burning method to obtain high resolution measurements. Binder-thickness deflagration limits were also determined, and work started on measurement of burning rate vs binder thickness. On the basis of results to date, a modified picture of the combustion zone is proposed that differs sharply from the classical model, particularly in those regions of the sandwich surface that are close enough to the AP-binder interface to correspond to processes in solid propellant combustion. A series of about 80 dye samples was tested by differential scanning calorimetry (DSC) for eutectic formation with ammonium nitrate and release of energy. Thirteen of these showed these desired characteristics. These were in the class of oxazines and dioxazines with ionic groups; and of ionic and non-ionic aminoanthraquinones. A discussion is given about the possibility of the non-ionic aminoanthraquinones to form eutectic mixtures with ammonium nitrate. A synthesis of 2,2′4,4′6,6′-hexanitro-3,3′-biphenol was carried out and its thermal properties as well as those of its potassium and ammonium salts were determined by differential scanning calorimetry. The significance of the use of dyes as fuels in fuel/oxidizer explosive systems and of the Colour Index for the discovery of further intermolecularly reacting explosive systems is discussed. PREFRACTURE BEHAVIOR OF SOLID PROPELLANTS Final Report, Sep. 1978 - Jul. 1980

C. C. Hsiao, S. S. Chern, and C. H. Cheng Edwards AFB, Calif. AFRPL Jul. 1981 72 p
(Contract F04611-78-C-0078; AF Proj. 2307)
(AD-A104746; AFRPL-TR-81-52) Avail: NTIS HC A04/MF A01 CSCL 21/9

A preliminary research in propellant prefracture behavior has been conducted. Both theoretical and experimental approaches have been carried out according to three phases of a program. Phase I was primarily concerned with the development of a mathematical model which would be applicable to a single prefracture configuration of solid propellant under stress. The occurrence of such a prefracture configuration in polymeric systems is usually termed a craze. Concurrently an experimental technique was to be developed for determining the displacement and stress fields in the vicinity of a craze. During this phase some specially prepared propellant polymers with and without ammonium perchlorate were tested. In Phase II extension to highly filled propellant polymer samples was to be added to the investigations. Phase III was to extend the studies to massive crazing and craze-crack transition and fracture propagation. This report covers the attempts made and work done in Phase I. Since the nature of this research is basic and complex, the efforts and developments are reported under separate headings as reflected in Section 2. GRA

PROPAGATION OF A LIQUID-LIQUID EXPLOSION

Francis H. Harlow and Hans M. Ruppel Aug. 1981 13 p refs
(Contract W-7405-eng-36)
(DE81-030780; LA-8971-MS) Avail: NTIS HC A02/MF A01

Direct contact between two liquids, one cold and the other hot, may be both fluids results in rapid local boiling, which may initiate a propagating liquid-liquid explosion. A mechanism is discussed for the propagation that involves implosion of the film, rapid mixing of the fluids, heat exchange to warm the cold fluid above the temperature for spontaneous nucleation, and the explosion generation of vapor, which in turn continues to sustain the film implosion. Plausibility for the model is demonstrated by means of numerical studies by high speed computer. DOE

N82-12253# EMCON Associates, San Jose, Calif.

STATE OF THE ART OF METHANE GAS ENHANCEMENT IN LANDFILLS

Jun. 1981 70 p refs Prepared for Argonne National Lab., Ill.
(Contract W-31-109-eng-38)
(DE82-000155; ANL/CNSV-23) Avail: NTIS HC A04/MF A01

Of great importance to the effective design and operation of landfill gas recovery systems are certain parameters that affect the lag time, yield, and rate of production of landfill-generated methane. These enhancement parameters include moisture content, pH buffering of the aqueous phase, nutrient addition, bacterial seeding, particle size, and density of refuse. Laboratory and field observations suggest that an increase in moisture content, coupled with buffering by a pH of 7 and the addition of nutrients and bacteria, will result in a shorter lag time while increasing both the yield and rate of methane generation. Work performed to date, however, does not enable quantifying functional relationships between the methanogenic process and its parameters. Such quantitative data are needed to predict overall process dynamics and optimize the design of any recovery system. DOE

FEASIBILITY AND ECONOMIC STUDY OF MEDIUM-Btu COAL GAS BLENDED WITH HIGH-Btu BY-PRODUCT GAS AS AN INDUSTRIAL ENERGY SOURCE AT BILLINGS, MONTANA Final Report

May 1981 297 p refs Prepared in cooperation with Northern Resources, Inc., Billings, Mont.
(Contract DE-FG01-79RA-20219)
(DE81-030622; DOE/FE-20219/2) Avail: NTIS HC A13/MF A01

The technical and economic feasibility of blending a medium Btu gas (MBG) produced from coal by the Winkler fluidized bed gasification process with excess refinery fuel gas to be used as an industrial fuel in Billings, Montana is assessed. The background of the project, the site selection process, the conceptual design of the process and supporting facilities, the retrofit requirements and other costs associated with burning the MBG, the environmental and permitting aspects of the project, the cost estimates and economic considerations, the contract provisions for MBG buy/sell agreements; the government's role in supporting the project, and the market potential for the project in Billings and similar projects in other markets are discussed. The project is technically feasible and economically viable today although parity with conventional fuels will not occur until 1985. DOE

DEVELOPMENT OF CATALYTIC SYSTEMS FOR THE CONVERSION OF SYNGAS TO JET FUEL AND DIESEL FUEL AND HIGHER ALCOHOLS Annual Report

William A. Slegeir Oct. 1980 18 p
(Contract DE-AC02-76CH-00016)
(DE82-000067; BNL-51423) Avail: NTIS HC A02/MF A01

A highly active series of Fischer-Tropsch catalysts are developed on the basis of insights provided by the oxide theory. The method of catalyst formulation is unique in Fischer-Tropsch chemistry, yet is simple and reproducible. These catalysts are superior to ordinary catalysts for hydrocarbon synthesis with regard to rate, operating conditions, and, product selectivity and longevity. The products of these catalysts are ideally suited for use as diesel and jet fuels. Once formed, the catalysts display remarkable stability toward air. Oxide interactions, the role of promoters, and the synergistic behavior of bimetallic catalysts systems are studied. Bimetallic systems for hydrocarbon and alcohol synthesis are discussed. DOE

ETHANOL PRODUCTION VIA FUNGAL DECOMPOSITION AND FERMENTATION OF BIOMASS, PHASE 2 Semiannual Progress Report, Oct. 1980 - Mar. 1981

Antonios A. Antonopoulos and Edward G. Wene Mar. 1981 21 p refs Prepared for Midwest Research Inst., Golden, Colo.
(Contract W-31-109-eng-38)
(DE82-000104; ANL/EES-TM-148) Avail: NTIS HC A02/MF A01

Research efforts focused mainly on continuing the: (1) isolating, culturing, and maintaining of Fusarium strains for biochemical evaluation; (2) screening for potentially cellulolytic F. strains; (3) searching for lignolytic and hemicellulolytic F. strains; (4) screening for effective pentose- and hexose-fermenting F. strains; and (5) evaluating various methods and materials for the optimization of certain fermentation parameters. Approximately 200 additional Fusarium isolates were isolated and screened; all showed cellulolytic activity, with 50 showing increased activity. Several isolates that formed fusoid to spheroid spores and cells on Xylan media were observed to retain their morphology in cellulose suspensions. All tested isolates were found to ferment glucose to ethanol; some yielded amounts of ethanol approaching those produced by yeast. In screening more than 600 isolates for Xylose fermentation, 25 were identified as effective fermenters. Reutilization of inoculum during consecutive fermentations was employed to facilitate higher ethanol yields from Xylose. A few Fusarium isolates indicated relatively high ethanol tolerability. DOE

W76 ELASTOMERS/PROPELLANT COMPATIBILITY

J. I. Martinez and D. A. Bouchard Jun. 1981 25 p refs
(Contract DE-AC04-76DP-00789)
(DE81-031933; SAND-81-0240) Avail: NTIS HC A02/MF A01

The survivability of unsealed section materials in a C-4 propellant outgassing environment was addressed. The compatibility of various materials, including the elastomers in an exaggerated environment was created by using an unrealistically large ratio of propellant to materials. Although most materials fared reasonably well in the test, it became obvious that further investigation of the elastomeric seals was necessary. The behavior of the elastomeric seals was also examined in a more realistic environment. DOE

SYNTHESIS GAS CONVERSION TO LIQUID FUELS USING PROMOTED FUSED IRON CATALYSTS
Richard A. Diffenbach, Richard R. Schehl, and Daniel J. Fauth
Sep. 1981 67 p refs
(DE81-030857; DOE/PETC/TR-81/3) Avail: NTIS
HC A04/MF A01

More active and stable nitrided iron catalysts were prepared for the conversion of synthesis gas to a proudct with a high alcohol content that could be used directly as an automotive fuel or converted to a gasoline-like product over a shape selective zeolite in a dual reactor unit. The rational is given for the preparation of a molybdenum-promoted nitrided fused ion catalyst. Catalyst characterization yielded equivocal results as to whether a mixed Fe-Mo nitride was formed. Regardless of the nature of the Mo-containing species, these catalysts were significantly more active than unpromoted nitrided fused iron catalyst. Characterization of fused iron catalysts using thermogravimetric analysis indicated the rates of reduction, carburization, and nitriding were strongly dependent on reaction temperature and particle size as well as the nature of the promoter. X-ray diffraction measurements indicated the metal crystallite size of the reduced catalysts was strongly dependent on reduction temperature. DOE

DEVELOPMENT OF HYDROCONVERSION OF BIOMASS TO SYNTHETIC FUELS Technical Progress Report, 1 Jan. - 31 Mar. 1981
Jul. 1981 56 p refs
(Contract DE-AC02-80CS-83004)
(DE81-030954; DOE/CS-83004/3) Avail: NTIS
HC A04/MF A01

The physical and chemical characterization data for Douglas fir hog fuel, maple hardwood, and corn stover are presented for comparison. Fluidization parameters were obtained for mixtures of char and hollow alumina spheres (-25 + 60 mesh) as the inert bed material. The driving characteristics of maple hardwood were measured isothermally in the range of 2000 to 4000 F. Three distinct moisture content regions were observed with different characteristic drying behaviors. Size reduction characteristics show that the throughput rate for various product screen sizes is lower for the moist, as-received feed than for the dried feed material. The hydrodevolatilization data of maple hardwood from the rapid heat-up rate, free-fall apparatus were analyzed. Comparison of the steam-char gasification rates of coal, peat, and maple hardwood chars shows that the reactivity level expected of the biomass char is significantly higher than that of coal and peat. FIXED-BED GASIFICATION
Jan. 1981 29 p refs
(DE82-000432; DOE/METC/SP-184) Avail: NTIS
HC A03/MF A01

Since the completion of construction in 1967, the METC Gasifier Pilot Plant has produced data and demonstrated operation on all major ranks of US coals. In 1976, METC began an expansion program to include a novel gas-cleanup facility to evaluate the environmental problems associated with gasification plants and also to develop improved cleanup systems. The construction and checkout of this full-scale cleanup system was completed within the past year and the pilot-plant facility now has the capability of gasifying all US coals and producing a relatively tar, oil, particulate, and sulfur free fuel gas. The Department of Energy's (DOE) fixed-bed gasification evelopment program includes other facilities that provide DOE with a broad capability to address alternative and advanced gasification technologies. In addition to utilizing these facilities to evaluate and improve gasification/cleanup configurations, the pilot plants are also being used to support a number of related projects. DOE

DENSITY-MEASUREMENT STUDIES AT THE BI-GAS PILOT PLANT
S. H. Sheen and A. C. Raptis Sep. 1981 17 p refs
(Contract W-31-109-eng-38)
(DE82-000910; ANL/FE-81-57) Avail: NTIS
HC A02/MF A01

An acoustic flow/no-flow monitor for the char return line of the BI-GAS pilot plant was developed. The indicator has operated successfully for the last three years. It was observed that the strength of the microphone signal is related to the amount of char in the line. In a recent experiment at BI-GAS this observation was further explored, and it was found that the signal is related to the char valve opening in the frequency range of 1 to 20 kHz. This is a clear indication that the flow/no-flow indicator can be upgraded to a density meter and consequently to a true mass flowmeter. This can be done by installing another flow/no-flow indicator upstream or downstream of the existing one and cross-correlating the two signals. DOE

SELECTIVE SEPARATION OF COAL FEEDSTOCKS FOR CONVERSION BY MAGNETIC SEPARATION TECHNIQUES
E. C. Hise and A. S. Holman 1981 8 p refs Presented at 91st Natl. Meeting of the Am. Inst. of Chem. Engr., Detroit 16 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028060; CONF-810814-6) Avail: NTIS
HC A02/MF A01

The Open-Gradient Magnetic Separation (OGMS) technique can separate particles on the basis of small differences in magnetic susceptibility. The highly reactive coal macerals are diamagnetic while the minerals and less reactive macerals range from slightly diamagnetic to paramagnetic with the pyritic minerals exhibiting the greatest positive magnetic susceptibility. OGMS can spread a falling stream of fine coal into a spectrum permitting the physical separation of these several maceral and mineral groups. Several eastern bituminous coals were selectively separated into five to ten fractions. Petrographic examination of these separated fractions shows a concentration of the maceral and mineral groups in the appropriate fractions. It is proposed that the selective separation of the most reactive macerals, as well as of those minerals that exhibit a catalytic effect, can enhance the efficiency of coal conversion. DOE

The reasons why process well integrity is important are covered in a review and evaluation of significant data generated from various field tests, including identification of well failure mechanisms. A close relationship is observed between process well behavior and process performance. As a logical extension of this evaluaton, design and performance criteria for underground coal gasification (UCG) process wells are developed. Applications to the next generation of field tests are presented in the form of proposed design features for UCG process wells, features intended to prevent the failure modes that have occurred in past field experiments. The market potential of hydrogen as a chemical raw material and a secondary energy carrier in the Federal Republic of Germany was assessed for various market sectors for the period from 1985 to 2025. The present status of research and technology is depicted. The hydrogen demand in the market sectors of chemistry, petroleum refining industry, steel production, energy, and transport are assessed. Hydrogen production costs for different actual and future technologies are asessed and compared with the production of competing energy carriers, including nuclear high temperature heat. The anticipated demand of hydrogen, broken down according to market sectors is given for the years 1985, 2005 and 2025, taking into account the development of the national and global energy demand. Eight technologies for the production of hydrogen and four technologies for the production of synthetic natural gas are compared, both technically and economically. Hydrogen from high temperature electrolysis of steam is expected to enter the market as a competitive energy carrier not before 2015 to 2025. Author (ESA)

FINITE ELEMENT ANALYSIS OF SOIL-SHEET PILE INTERACTION Ph.D. Thesis
David William Nyby 1981 232 p
Avail: Univ. Microfilms Order No. 8120717

A finite element model which accurately and economically models soil-sheet pile structures was developed. The model was used to analyze cantilever and anchored sheet pile walls. The finite element model includes transition and interface elements. The transition element has the capability of conforming to the displaced shape of the sheet pile elements on one side (cubic element) and soil elements on the other sides (bilinear element). The interface element models the frictional resistance between the soil and the sheet pile. It behaves elastically below a threshold force level (Coulomb friction) and perfectly plastic above this value. The soil is modeled using nonlinear constitutive relations. These relations are used for both the transition elements and the bilinear elements. The economy of the finite element model was increased in two ways. Closed-form integration was used to reduce the computational effort and an equation solver was used which takes advantage of the banded, symmetric, and positive-definite characteristics of the global stiffness matrix. Dissert. Abstr.

AN IMPROVED MODEL FOR SOIL-STRUCTURE INTERACTION ANALYSIS Ph.D. Thesis
Abdul Quddus Mohammad 1981 170 p
Avail: Univ. Microfilms Order No. 8118889

A model for beams supported on a soil layer of finite thickness is developed by proposing that such foundations may be represented by vertical springs (with stiffness, k) connected by shear springs (representing shear properties of soil) defined by shear stiffness, k sub s. A method of solution based on the principle of minimum potential energy is proposed for such a model. Numerical examples for a wide range of foundation variables are worked out for displacement of the contact surface along the length of the beam as well as beyond the physical limits of the beam. The pressure distribution at the interface and the bending moment of the beam are also solved. Numerical results indicate that displacements, pressure distribution, and bending moment differ considerably as compared to Winkler solution. Dissert. Abstr.

SOIL STABILIZATION BY CHEMICAL ADDITIVES Ph.D. Thesis
Fouad Muhammed Ghazali 1981 229 p
Avail: Univ. Microfilms Order No. 8121199

The effects of phosphoric acid and lime additives on the compaction characteristics, the cohesion value, and the angle of friction of soils containing various percentages of Kaolin clay were compared and the applicability of Sherif's procedure for determining the coefficient of lateral earth pressure at rest for chemically stabilized soils was investigated. Both additives were found to increase the cohesion and the angle of friction of compacted sandkaolin clay mixtures. Increments were greater in basic addition than in acidic addition. The increment in the cohesion value is dependent mostly on clay content, water content and dry density while the increment in the angle of friction is mostly dependent on clay content and water content, with the factors of the type and content of the chemical common to both increments. Compaction data indicate that maximum dry density, and optimum water content are dependent on clay content and chemical type and content. The expression proposed by Sherif was found to be applicable for chemically treated cohesive soils. Dissert. Abstr.

BEHAVIORAL PREDICTIONS OF COMPACTED EMBANKMENTS ON RIGID FOUNDATIONS Ph.D. Thesis
Darwin Eugene Fox 1981 231 p
Avail: Univ. Microfilms Order No. 8122513

Samples of excavated schists were taken during construction from railroad right-of-way of the nearly vertical multicolored beds used in embankments as high as 35 m. From one site, composite samples weighing 667 N each were taken of individual colored layers, red, yellow, white, and black, at a depth of 30 m. The red layer was also sampled at a depth of 8 m, and a representative mixed sample was taken from the adjacent fill area. At a second site, 50 km eastward, a grey-green micaceous schist, more highly metamorphosed, was at the 35 m depth. Samples were examined by X-ray diffraction and electron microscopy. Standard engineering tests placed all samples in the ASSHTO A-4 classification, close to the boundary of A-5, being nonplastic or with low plasticity indexes, and with liquid limits from 30 to 38. Based on results of an Iowa K-Test and a mathematical model, earth pressure and settlement predictions are made, and stability calculations along a cycloidal rupture surface are shown. Procedures are seen to be compatible with simplified hand calculationns or computerized finite element techniques, and produce realistic values. Dissert. Abstr.

STRAIN AND PORE PRESSURE BEHAVIOR OF FINE

GRAINED SOILS SUBJECTED TO CYCLIC SHEAR LOADING Ph.D. Thesis
Rune Dyvik 1981 360 p
Avail: Univ. Microfilms Order No. 8121143

The behavior of fine grained soils subjected to cyclic loading is investigated. Consolidated, constant volume, static (monotonic) and cyclic laboratory shear tests were performed using the Norwegian Geotechnical Institute direct simple shear device, which was modified for cyclic loading capabilities. All cyclic tests were performed with stress controlled square wave loading and most with complete and symmetric stress reversal. Pore pressure is found to be a basic indication of the degradation of a soil specimen subjected to shear. Pore pressure is used directly in predicting the behavior of soil specimens subjected to varying cyclic stress levels. A unique relationship between modulus and pore pressure for a particulr soil subjected to cyclic loading is observed. If the cyclic shear strain at any test parameter combination (cyclic shear stress level and number of cycles) is determined (through constitutive relations or graphically), the resulting pore pressure is also determined from this unique relationship. Dissert. Abstr.

THE HANDLING, HAZARDS, AND MAINTENANCE OF HEAVY LIQUIDS IN THE GEOLOGIC LABORATORY
Phoebe L. Hauff and Joseph Airey 1980 28 p refs
(USGS-CIRC-827) Avail: NTIS HC A03/MF A01

Data on toxic properties are presented for organic heavy liquids bromoform, methylene iodide, tetrabromoethane, and cleric compounds used for mineral separation processes. The physical properties, hazards of handling, proper storage facilities, and adequate protective clothing are discussed for each compound as well as for their common and less-common solvents. Toxicity data are listed along with exposure symptoms and suggested first aid treatments. Safety for the worker is emphasized. Three reclamation methods which recover the solvent used as a dilutant and purify the heavy liquid are discussed. These include: the water cascade, refluxing-distillation-condensation, and flash evaporation methods. Various techniques for restoration and stabilization of these heavy liquids are also included. A ONE-DIMENSIONAL PLANE WAVE PROPAGATION CODE FOR LAYERED RATE-DEPENDENT HYSTERETIC MATERIALS Final Report, Nov. 1979 - Sep. 1981
John O. Curtis Sep. 1981 95 p refs
(DA Proj. 4A1-61101-A9-1D)
(AD-A105241; WES/MP/SL-81-25) Avail: NTIS HC A05/MF A01 CSCL 08/13

Recent experimental data on soils showing that the application of loads with submillisecond rise times results in significant rate-dependent compressibility behavior have prompted the need for a one-dimensional plane wave propagation code for layered rate-dependent hysteretic or visco-compacting materials. An explicit one-dimensional finite element code--named ONED3P--was developed which incorporates a three-parameter (spring and dashpot) mechanical model consisting of a linear spring and dashpot in series coupled in parallel with a piecewise linear hysteretic or compacting spring. ONED3P allows for analysis of a column of multilayered visco-compacting soils loaded by a digitized surface pressure-time history. Any set of consistent units may be used with this code and results may be obtained in the form of stress-, strain-, acceleration-, velocity-, and/or displacement-time histories as well as stress-strain curves using standard Calcomp software. Several demonstration problems were calculated using ONED3P to evaluate its features and capabilities against (a) available analytical solutions for viscous and nonviscous problems, (b) other code solutions, and (c) measurements from field experiments that evince rate-dependent soil behavior. In general, results were extremely good. Special attention was given to the effects of loading rate or frequency on wave speeds in viscous media and to methods of deriving the ONED3P model parameters from laboratory material property test data. Program listings and a user's guide are included. GRA

MIDWAY HOUSE-TIGHTENING PROJECT: A STUDY OF INDOOR AIR QUALITY
Francis J. Offermann, John R. Girman, and Craig D. Hollowell May 1981 30 p refs
(Contract W-7405-eng-48)
(DE81-030886; LBL-12777) Avail: NTIS HC A03/MF A01

Effects leakage areas and average concentrations of nitrogen dioxide, formaldehyde, and radon, were measured in 12 houses before and after special house-tightening retrofits. The average reduction in leakage area resulting from these retrofits was 32%. None of the pollutants measured before or after the retrofits reached levels exceeding existing guidelines. The moderate increases in radon and formaldehyde concentrations observed are consistent with what could be expected from the estimation average decrease in air-exchange rates. Because the pre- and post-retrofit measurement involved only single, relatively short-term samples taken two months aparts, uncertainties associated with the variability of source strength and occupant activities affecting ventilation remain and preclude any definitive conclusions. DOE

SOLAR HEATING AND COOLING OF BUILDINGS (SHACOB): REQUIREMENTS DEFINITION AND IMPACT ANALYSIS-2. VOLUME 1: ENERGY-CONSERVING DESIGN FOR RESIDENTIAL STRUCTURES
C. K. Cretcher Nov. 1980 140 p refs Sponsored by Electric Power Research Inst.
(EPRI Proj. 553-2)
(DE82-900206; EPRI-EM-1506-Vol-1) Avail: NTIS HC A07/MF A01

The impact of stringent energy conserving building standards on electric utility service areas and their customers was analyzed. The demands on the seven broadly representative electric utilities were aggregated to represent the total new construction electric heating demands in the years 1990 and 2000 to be compared to the aggregate obtained similarly for a nominal, less stringent standard, viz., ASHRAE 90-75. Results presented include the percentage of energy savings achieved in both heating and cooling seasons and typical demand profile changes. A utility economic impact analysis was performed for the cases investigated to determine changes in operating costs and potential capacity sales.

A third cost component considered is the incremental cost of superinsulation (over ASHRAE 90-75) to the customer. The aggregate net cost to the utility/customer entity is utilized as a measure of overall economic benefit. DOE

SOLAR HEATING AND COOLING OF BUILDINGS (SHACOB): REQUIREMENTS DEFINITION AND IMPACT ANALYSIS-2. VOLUME 3: CUSTOMER LOAD MANAGEMENT SYSTEMS
C. K. Cretcher and R. C. Rountredd Nov. 1980 87 p refs Sponsored by Electric Power Research Inst.
(EPRI Proj. 553-2)
(DE82-900208; EPRI-EM-1506-Vol-3) Avail: NTIS HC A05/MF A01

Customer Load Management Systems, using off-peak storage and control at the residences, are analyzed to determine their potential for capacity and energy savings by the electric utility. Areas broadly representative of utilities in the regions around Washington, DC and Albuquerque, NM were of interest. Near optimum tank volumes were determined for both service areas, and charging duration/off-time were identified as having the greatest influence on tank performance. The impacts on utility operations and corresponding utility/customer economics were determined in terms of delta demands used to estimate the utilities' generating capacity differences between the conventional load management, (CLM) direct solar with load management (DSLM), and electric resistive systems. Energy differences are also determined. These capacity and energy deltas are translated into changes in utility costs due to penetration of the CLM or DSLM systems into electric resistive markets in the snapshot years of 1990 and 2000. DOE

CONTROL SYSTEMS IMPROVEMENTS IN A PRECISION COORDINATE MEASURING MACHINE
S. S. Douglass, E. F. Babelay, Jr., R. E. Igou, L. M. Woodard, and W. L. Green Sep. 1981 17 p refs
(Contract W-7405-eng-26)
(DE82-000024; Y-2249) Avail: NTIS HC A02/MF A01

A conventional, manually driven Moore No. 3 coordinate measuring machine at the Oak Ridge Y-12 Plant is being upgraded to provide a continuous-path numerical control capability and simultaneously serve as a vehicle for testing new machine slide-control concepts. Besides new lead screw drive motors, an NC machine control unit, and a closed-loop servo system, the machine has also been equipped with vibration isolation, air-bearing slideways, and laser interferometric position feedback. The present conventional slide servo system will be replaced with a digital servo system wherein various feedback and compensation techniques can be realized through the use of a high speed, dedicated digital processor. The improvements to data are described with emphasis on identification and compensation of the slide control systems. GRA

INTERIOR DESIGN FOR PASSIVE SOLAR HOMES
Jill C. Breen Jul. 1981 7 p refs Presented at the 6th Natl. Passive Solar Conf., Portland, Oreg., 8-12 Sep. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-027939; SERI/TP-721-1312; CONF-810925-10) Avail: NTIS HC A02/MF A01

The increasing emphasis on refinement of passive solar systems brought recognition to interior design as an integral part of passive solar architecture. Interior design can be used as a finetuning tool minimizing many of the problems associated with passive solar energy use in residential buildings. In addition, treatment of interior space in solar model homes may be a prime factor in determining sales success. A new style of interior design is evplving in response to changes in building from incorporating passive solar design features. The psychology behind passive solar achitecture is reflected in interiors, and selection of interior components increasingly depends on the functional suitably of various interior elements. DOE

COMPARISON OF RESIDENTIAL WINDOW DISTRIBUTIONS AND EFFECTS OF MASS AND INSULATION
M. Hannifan, C. Christensen, and R. Perkins Jul. 1981 7 p refs Presented at the 6th National Passive Solar Conf., Portland, Oreg. 8-12 Sep. 1981
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE81-027938; SERI/TP-721-1300; CONF-810925-9) Avail: NTIS HC A02/MF A01

The energy requirements and comfort implications of various window distributions and window areas (representing conventional, sun-tempered, and passive solar designs) are investigated for single-family residences in Albuquerque, NM, Denver, CO, and Madison, WI. Three distinct mass levels ranging from lightweight to heavyweight interiors and three distinct insulations levels, including energy-conserving, night-insulated, and superinsulated cases, are analyzed. Energy requirements are reported for residences with electric resistance heating and mechanical air conditioning. Comfort conditions reported are based on interior average air temperatures and mean-squared errors. DOE

MATERIALS FOR MAGNETIC REFRIGERATION BETWEEN 2 AND 20 K
J. A. Barclay and W. A. Steyert May 1981 24 p refs
(Contract W-7405-eng-36)
(DE81-024031; LA-8746-MS) Avail: NTIS HC A02/MF A01

As part of a research and development program on magnetic refrigeration, paramagnetic materials suitable for magnetic refrigeration in the 2 to 20 K range were studied for the Jet Propulsion Laboratory. The best materials with known properties, as derived from a literature survey, are plotted. For one of those materials, gadolinium gallium garnet, the results are presented of field-dependent heat capacity measurements. Preparation and fabrication of gadolinium compounds are discussed briefly as well as the scope of further work for selecting and studying working materials for magnetic refrigeration. DOE

NEW BUILDING MATERIALS. A CONTRIBUTION TO ENVIRONMENTAL PROTECTION. SUBPROJECT: FLY ASH CEMENT Final Report
Dieter Deuster Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 138 p refs In GERMAN; ENGLISH summary Sponsored by Forschung und Technologie
(BMFT-FB-T-80-176; ISSN-0340-7608) Avail: NTIS HC A07/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 29

Fly ash cement was developed from a mixture of Portland cement and fly ash as a hydraulic binding agent. In laboratory investigations, fly ash cement was produced by homogenizing

Portland cement, clinkers, and fly ash as well as by grinding Portland cement, clinkers, gypsum and fly ash together. The experiments indicate that grinding the components together gives higher compressive strength than grinding separately, followed by homogenizing. Investigations were conducted in which the fly ash cement was produced by grinding the components together with a fly ash content of 30% by weight. This cement meets specifications and fits into the range of the cement standard DIN 1164. For the Federal Republic of Germany, it is officially permitted for the first time for construction purposes as fly ash cement, designated as FAZ 35 F. Author (ESA)

SIMULATION OF THE FLOW DURING STAMPING: CHARACTERISTICS AND APPLICATION OF MODELING CLAY USED FOR SIMULATION OF MATERIAL FLOW IN A FORGE Final Report [SIMULATION DES ECOULEMENTS EN ESTAMPAGE]

S. Jacomet, H. J. Braudel, J. L. Chenot, and Sophia Antipolis (CEMEF) 9 Mar. 1981 60 p In FRENCH
(Contract CEMEF-4.79.7465)
(CETIM-1.3K.28.2) Avail: NTIS HC A04/MF A01

Information is given on the design of experiments where material flow during a stamping process is simulated. The choice of modeling clay is discussed, relating to seven different types. Rheological tests in order to characterize the modeling clays are described. The preparation of specimens is explained. The mechanical equipment necessary for stamping simulation is determined. MODELLING OF SOIL-STRUCTURE INTERACTION BY FINITE AND INFINITE ELEMENTS Ph.D. Thesis

Francisco Medina Dec. 1980 68 p refs Sponsored in part by Chile Univ., Santiago and Organization of American States
(Grants NSF ENV-76-04264; NSF PFR-79-08261)
(PB81-229270; UCB/EERC-80/43; NSF/RA-800548) Avail: NTIS HC A04/MF A01 CSCL 13M

A direct method for solving dynamically excited structures on elastic semi-infinite media is suggested as an improvement over available approaches. The method consists in modeling the near field with finite elements and the far field with infinite elements. The method falls within the framework of the classical finite element method and preserves its flexibilities. The key to the success of the proposed method is the proper definition of the infinite element shape functions. An axisymmetric infinite element is developed to solve three dimensional wave propagation problems in cylindrical orthotropic, elastic, unbounded continua. The element is capable of propagating Rayleigh, shear and compressional waves in the frequency domain. A scheme to numerically integrate the element characteristic matrices is formulated based upon Gauss-Laguerre quadrature. GRA

SOME ASPECTS OF SKIN FRICTION OF PILES IN CLAY UNDER CYCLIC LOADING

H. G. Poulos Dec. 1980 33 p refs Sponsored in part by the Australian Research Grants Committee and the Univ. of Sydney
(PB81-226730; R-379) Avail: NTIS HC A03/MF A01 CSCL 13B

A number of mode tests on a pile shaft in clay were performed to investigate the influence of cyclic loading on the ultimate skin friction. It is found that the loss of skin friction due to cyclic loading depends on both the cyclic displacement prior to failure and the number of cycles of load. Such loss of skin friction can occur both for one way or two way cyclic loading. The cyclic stiffness of the pile depends on the cyclic displacement of the pile. The rate of loading also influences the skin friction but does not appear to influence the stiffness of the pile. GRA

UNIFICATIONS AND EXTENSIONS OF THE MULTIPLE ACCESS COMMUNICATIONS PROBLEM Ph.D. Thesis

Mart Lauri Molle 1981 138 p
Avail: Univ. Microfilms Order No. 8121012

Multiple access protocols permit a broadcast communications channel to be shared by a large number of stations under distributed control. It is assumed that only one message at a time can be transmitted successfully over the common channel. A local optimality condition for synchronous multiple access protocols was derived and it is shown that many known protocols are special cases of this condition. A survey of much of the recent work on infinite population tree algorithms that use the history of channel activity to carry out short-range dynamic scheduling is included. An approach is presented for deriving upper bounds on the maximum stable throughput with finite average delay for infinite population protocols. Dissert. Abstr.

N82-12290 Washington Univ., Seattle.

MODELING AND PERFORMANCE OPTIMIZATION OF LARGE-SCALE DATA-COMMUNICATION NETWORKS Ph.D. Thesis

Francis D. Gorecki 1981 159 p
Avail: Univ. Microfilms Order No. 8121200

A theory of modeling, analysis, and performance optimization is developed and illustrated for large-scale, data communication networks. In a novel and significant departure from existing problem formulations, channel and network models are presented which include the effects of channel distortion, nodal processing errors, and protocol dependent errors. All of these effects are of critical importance in practice, but cannot be readily incorporated into other models. Information theoretic techniques are developed and used to characterize network capacity and message integrity as a function of protocols, routing policies, channel capacity assignment, and channel distortion. Flow assignment techniques which optimize network performance with respect to certain classes of physically important performance matrices are formulated and employed to derive centralized and distributed routing algorithms. Dissert. Abstr.

A COMBINED SOURCE-CHANNEL CODING APPROACH TO IMAGE TRANSMISSION Ph.D. Thesis

David George Daut 1981 410 p
Avail: Univ. Microfilms Order No. 8121141

A combined source-channel coding approach is described for the encoding, transmission, and remote reconstruction of image data. Several two dimensional image source encoding schemes are considered. Each source encoding technique is relatively efficient in the absence of channel errors. In the presence of channel errors, however, system performance degrades rapidly. By providing error control protection to those encoded bits which contribute most significantly to image reconstruction, it is possible to minimize this degradation without sacrificing transmission bandwidth. The result is a relatively robust overall system design which is reasonably insensitive to channel errors and yet provides performance approaching the rate distortion bound. Dissert. Abstr.

N82-12292 California Univ., Los Angeles.

ANALYSIS OF NONCOHERENT MULTIPLE ACCESS COMMUNICATION CHANNELS Ph.D. Thesis

Ronald Eugene Sorace 1981 149 p
Avail: Univ. Microfilms Order No. 8122849

A number of users simultaneously transmitting M-ary frequency shift keying signals via a multiple access channel to a receiver are considered. The two types of noncoherent detectors considered for each of the M orthogonal frequencies are a binary hard decision single threshold detector and a multilevel soft decision detector. After presentation of a random coding bound for block codes, a random coding bound for a hybrid convolutional coding scheme using a super Viterbi decoder is given. This latter notion is contrasted to independent user decoding. The convolutional coding system is studied for two types of noise which are particularly detrimental to multiple access communication. Various combinatorial expressions to facilitate performance computations are presented. Emphasis is given to the hard decision scheme, since the reduced information at the receiver renders this situation more difficult. A closely related pulse position modulation laser communication system with multiple access is also examined. Dissert. Abstr.

N82-12293 Northeastern Univ., Boston, Mass.

BANDWIDTH CONSTRAINED SIGNAL DESIGN FOR DIGITAL COMMUNICATION OVER RAYLEIGH FADING CHANNELS AND PARTIAL BAND INTERFERENCE CHANNELS Ph.D. Thesis

Iftekhar Rahman 1981 320 p
Avail: Univ. Microfilms Order No. 8122612

Signal design techniques involving bandwidth efficient coding and modulation are investigated for Rayleigh fading channels and partial band interference channels, and several aspects of the design problem are discussed. Performance is evaluated by deriving upper bounds to the bit error rates as a function of the bit signal to noise ratio and with a bandwidth constraint. Single level codes and concatenated codes are treated. Hard decision decoding and unquantized soft decision decoding are evaluated and compared. Several signal designs are compared and conclusions drawn regarding their relative efficiency. A more general approach to the design problem is then taken by deriving the capacity and computational cut-off rate limits. These limits are then used to obtain performance bounds for the existing codes. Finally, it is discussed how one may in practice use the results to design efficient waveforms, from a basic set of FSK-type (bandwidth limted) signals, for reliable communication over Rayleigh Fading channels. Dissert. Abstr.

MESSAGE QUEUEING DELAYS IN POLLING SCHEMES WITH APPLICATIONS TO DATA COMMUNICATION NETWORKS Ph.D. Thesis

Luis Felipe M. deMoraes 1981 241 p
Avail: Univ. Microfilms Order No. 8120941

Polling multiple-access schemes, which are intended to provide the coordination and efficient share of communication facilities among the several users of a network, are presented and analyzed. Two polling disciplines, the gated and exhaustive, under which the terminals are polled in a cyclic fashion, are considered and studied. A polling scheme with positional priorities is also introduced. By noting the several similarities between this last and a TDMA scheme, where the messages at each terminal can belong to several priority levels, results for such a TDMA scheme are also obtained. Finally, another polling procedure, which employs reservation polling (probing) time periods during which busy terminals are identified, is introduced and analyzed. The performance index used in analyses consists of the message waiting time. The analyses are carried out within a queueing theoretic framework for network terminals modeled as independent sources, which generate messages according to a renewal process. An analytical technique, which employs a Markov ratio limit theorem is presented for the derivation of performance parameters. Dissert. Abstr.

MULTIPLE ARRESTED SYNTHETIC APERTURE RADAR Ph.D. Thesis

Jerrold Stuart Shuster 1981 296 p
Avail: Univ. Microfilms Order No. 8119140

A radar (MASAR) for the detection of slowly moving targets in clutter was analytically conceptualized and evaluated. The radar consists of a succession of synthetic aperture antennas which are coincident in space but are displaced in time by several interpulse periods. The radar is evaluated using the target to clutter power ratio as the measure of performance. The radar is assumed to be clutter power limited, so noise is ignored in the evaluation. The evaluation consists of a comparison between three different receiver processing schemes. The first processor is a set of weights which optimizes the target to clutter power ratio and is the central feature of MASAR. The second processor is a set of weights comprising the target signal, itself; it is shown to be optimum for rapidly decorrelating clutter. The third processor is set of binomial weights; effectively, it reduces the system to an n-pulse canceller which, for a two antenna system, is the well known displaced phase center antenna (DPCA) radar. Dissert. Abstr.

N82-12296 Colorado Univ. at Boulder.

EFFICIENT STRUCTURE, AND ALGORITHMS FOR DIGITAL SIGNAL PROCESSING Ph.D. Thesis

Masud M. Arjmand 1981 260 p
Avail: Univ. Microfilms Order No. 8122266

Algorithms and structures for specific signal processing problems that effectively utilize the capabilities offered by modern integrated circuit technology are developed. Several parameters that determine whether or not a given algorithm and its resultng hardware structure is efficient are studied. Among these parameters are finite wordlength effects, computational and hardware complexity (measured in the form of chip area of an implementation), speed of operation or data throughput, modularity and regularity. The definition of an efficient algorithm is determined by the technology used to implement that algorithm. Some of the factors that influence the development of very large scale integration algorithms for signal factors for signal processing are discussed. Three major areas of signal processing, namely, linear filtering, noncyclic convolution and Fourier transformation are considered. Dissert. Abstr.

REAL-TIME MULTIPLE-LOOK SYNTHETIC APERTURE RADAR PROCESSOR FOR SPACECRAFT APPLICATIONS Patent

Chialin Wu (JPL, California Inst. of Technology, Pasadena) and Vance C. Tyree, inventors (to NASA) (JPL, California Inst. of Technology, Pasadena) Issued 29 Sep. 1981 13 p Filed 15 Dec. 1978 Supersedes N79-14278 (17 - 05, p 0585) Sponsored by NASA
(NASA-Case-NPO-14054-1; US-Patent-4,292,634;
US-Patent-Appl-SN-969761; US-Patent-Class-343-5CM) Avail: US Patent and Trademark Office CSCL 17I

A spaceborne synthetic aperture radar (SAR) having pipeline multiple-look data processing is described which makes use of excessive azimuth bandwidth in radar echo signals to produce multiple-looking images. Time multiplexed single-look image lines from an azimuth correlator go through an energy analyzer which analyzes the mean energy in each separate look to determine the radar antenna electric boresight for use in generating the correct reference functions for the production of high quality SAR images. The multiplexed single look image lines also go through a registration delay to produce multi-look images.

AN EVALUATION OF THE PERFORMANCE OF 12 GHz LOW COST TVRO TERMINALS IN NORTHWESTERN ONTARIO
R. W. Huck and E. L. Perrier Aug. 1981 79 p
(CRC-1345) Avail: NTIS HC A05/MF A01

The technical performance of low cost terminals over a long period, the ability of users to operate the terminals, and the acceptability of the signals received from Anik B were assessed at 25 of the 43 terminals installed in Northwestern Ontario, to receive programs of the Ontario Educational Communications Authority. The procedures used to make the on-site measurements are described. Results are summarized and analyzed for the following: (1) polarization angle error; (2) antenna pointing errors; (3) noise figures; (4) carrier-to-noise ratio and signal-to-noise ratio; (5) baseband distortions; (6) IF bandpass response and AFC operation; and (7) remodulator response. PROMPT DETECTION OF AIRCRAFT MANEUVERS BY USE OF RANGE RATE RADAR DATA Final Report
James A. Shannon Aug. 1981 46 p
(AD-A105063; FAA-RD-81-62) Avail: NTIS HC A03/MF A01 CSCL 17/9

In addition to the usual range and bearing information concerning aircraft targets, the next generation of long range radars can have the capability of measuring directly a component of velocity. An investigation was conducted to determine first, the accuracy with which target velocity can be measured and secondly, how these velocity data can be exploited so as to better predict aircraft position. A B727 was flown in a special pattern, which included many maneuvers, at a distance of about 100 nmi from a prototype of the velocity measuring radar. The standard deviation of the measurement of the component of velocity was found to be less than 1.3 knots. The velocity data from the test flight were subjected to processing by a tracker which calculates changes in aircraft heading from changes in velocity component. The results are promising. In all maneuver were immediately detected and the velocity vectors constructed by the tracker followed closely the vectors flown by the aircraft. The benefical consequences of incorporating a tracker using velocity data are pointed out. An example is given comparing the automatic of a potential conflict using the conventional tracker and then the tracker which processes velocity data. In the example the use of such data is vital to a safe resolution. GRA

MOVING TARGET DETECTOR/AIRPORT SURVEILLANCE RADAR (ASR-7) FIELD EVALUATION Final Report, Feb. 1979 - Jan. 1980
W. Goodchild Aug. 1981 52 p refs
(AD-A105196; FAA-CT-81-31; FAA-RD-81-57) Avail: NTIS HC A04/MF A01 CSCL 17/7

The Moving Target Detector (MTD) II, a sophisticated radar processor, was evaluated to determine its capability to provide improved radar detection in an air traffic control (ATC) environment. The MTD II was installed on one channel of an airport surveillance radar (ASR-7) at Burlington, Vermont. The major objective of testing was to compare the performance of the MTD II with that of the ASR-7 Moving Target Indicator (MTI). This report concentrates on the comparative probability of detection, false alarm rate, MTI improvement factor, subclutter visibility, dynamic range, velocity response, and the simultaneous flight test results of the two systems. Comparison of the MTD II to the MTD I system is made when necessary to show major improvements or deficiencies in the MTD II design. The results of the tests have shown that the MTD II provides surveillance capabilities superior to those of the ASR-7/MTI. Author (GRA)

COLUMBUS, OHIO, VOICE RESPONSE SYSTEM DEMONSTRATION AND EVALUATION Final Report, Dec. 1979 - Apr. 1980
John C. Henline Jun. 1981 54 p
(FAA Proj. 131-402-854)
(AD-A104750; FAA-CT-80-50; FAA-RD-81-20) Avail: NTIS HC A04/MF A01 CSCL 17/2

The Voice Response System (VRS) was subjected to a 4-month demonstration in the Columbus, Ohio, Flight Service Station (FSS) preflight area. The purpose of the experiment was to test and evaluate the VRS system, user acceptance, and the effects on the specialists/facility workload, and to determine the general impact of VRS on the Columbus (CMH) FSS preflight area. In addition, the test permitted collection of technical performance data which could serve as the framework for an integrated national system for the mass dissemination of weather information. It is concluded that the VRS caused a shift in user demand/preference, reduced FSS briefer workload, reduced demand for basic pilots automatic telephone weather answering service (PATWAS), and was determined to be acceptable to the general aviation user. OPTICAL PROCESSING FOR ADAPTIVE PHASED ARRAY RADAR Final Technical Report, 1 Jan. - 31 Dec. 1980
David Casasent Jun. 1981 193 p refs
(Contract F30602-80-C-0048; AF Proj. 2304)
(AD-A105124; RADC-TR-81-152) Avail: NTIS HC A09/MF A01 CSCL 17/9

Three new optical signal processing techniques for adaptive phased array radar (APAR) signal processing are described. The coherent optical correlator uses acousto-optic transducers and computes the far-field noise distribution of the antenna. Digital post-processing is then used to compute the adaptive weights from this information. A new hybrid time and space integrating optical signal processing architecture is advanced and a new adjunct antenna concept is introduced for this processor. Initial acousto-optic experimental results and initial simulations are advanced. An electronic support system and the necessary post-processing issues are described. The second technique uses an input LED array and fiber optic interconnections with a linear photo detector to realize a vector-matrix processor. With the addition of an electronic feedback system, an iterative optical processor results. This system computes the set of adaptive weights given the covariance matrix of the noise field and the desired steering vector. The design and performance of the system fabricated and its use in an APAR signal processing are described. A new wavelength diversity processor concept for the iterative optical processor is described in many new algorithms and potential applications of the system are provided. Author (GRA)

COMPARATIVE STUDY OF NONLINEAR TIME WARPING TECHNIQUES IN ISOLATED WORD SPEECH RECOGNITION SYSTEMS

A. Waibel and B. Yegnanarayana 17 Jun. 1981 60 p refs
(Contract F33615-78-C-1551; ARPA Order 3597; Grant NSF MCS-78-25825)
(AD-A104865; CMU-CS-81-125) Avail: NTIS HC A04/MF A01 CSCL 09/2

In this paper we present the description of an isolated word recognition system and a discussion of various design choices that effect its performance. In particular, we report experimental results aimed at evaluating several methods to optimize the performance of dynamic warping algorithms. Three major aspects that have been suggested have been investigated: relaxation of the boundary conditions to allow for inaccurate begin-end time detection; choice of warping algorithm, e.g., Itakura asymmetric, Sakoe and Chiba symmetric, Sakoe and Chiba asymmetric; and choice of an appropriate warping window to restrict computation to a minimum needed for best recognition results. Recognition results were tested on two vocabularies: the digits and a highly confusable subset of the alphabet (e.g., a, b, d, p, t, g, v, c, z). The relaxation of the boundary conditions degraded the performance of the confusable subset and the digits. The asymmetric Itakura algorithm yielded better results for the confusables, while we obtained slightly better results for the digits using the symmetric Sakoe and Chiba algorithm. The choice of a 100-ms warping window appears to be optimal for both vocabularies used. Author (GRA)

RADAR IMAGING FROM A DISTORTED ARRAY

B. D. Steinberg 13 Oct. 1981 24 p refs
(WF12100000)
(AD-A104803; NRL-MR-4646) Avail: NTIS HC A02/MF A01 CSCL 17/9

High angular resolution radar imaging may be achieved with a large-aperture antenna even if the aperture is distorted, provided that adaptive signal processing compensates for the distortion. An algorithm for imaging ground-based targets is described and experimental results are given for a 3 cm wavelength demonstration system using a distorted 27 m, random, sparse array. The measured beamwidth of one mr conformed to theory, confirming the validity of the technique. Extension of the algorithm to accommodate isolated targets such as aircraft and ships also is discussed. Author (GRA)

ESTIMATION OF BIAS ERRORS IN ANGLE-OF-ARRIVAL MEASUREMENTS USING PLATFORM MOTION Interim Report

A. Grindlay 28 Aug. 1981 17 p refs
(RR0210541)
(AD-A104742; NRL-8512) Avail: NTIS HC A02/MF A01 CSCL 17/3

An algorithm has been developed to estimate the bias errors in angle-of-arrival measurements made by electromagnetic detection devices on-board a pitching and rolling platform. The algorithm assumes that continuous exact measurements of the platform's roll and pitch conditions are available. When the roll and pitch conditions are used to transform deck-plane angular measurements of a nearly fixed target's position to a stabilized coordinate system, the resulting stabilized coordinates (azimuth and elevation) should not vary with changes in the roll and pitch conditions. If changes do occur they are a result of bias errors in the measurement system and the algorithm which has been developed uses these changes to estimate the sense and magnitude of angular bias errors. MULTIPLE ELECTROMAGNETIC SCATTERING FROM A CLUSTER OF SPHERES. VOLUME 1: THEORY Special Report, Jun. 1979 - Sep. 1980

F. Borghese, P. Denti, and O. I. Sindoni Aberdeen Proving Ground, Md. Army Armament Research and Development Command Sep. 1981 21 p refs
(Grant DA-ERO-78-G-106)
(AD-A105453; ARCSL-SP-81008) Avail: NTIS HC A02/MF A01 CSCL 20/6

A method to calculate the electromagnetic scattering properties of a cluster of spheres of arbitrary radii and possibly complex refractive indexes is proposed. The suggested approach takes into account multiple scattering effects and does not require any approximation except for the truncation of the multipolar expansions describing the scattered field. NEW APPROACH TO SPEECH DIGITIZATION COMBINING TIME-DOMAIN HARMONIC SCALING AND ADAPTIVE RESIDUAL CODING Final Report, Oct. 1980 - Aug. 1981

James L. Melsa and Arun K. Pande 31 Aug. 1981 174 p refs
(Contract DCA100-80-C-0050)
(AD-A105383) Avail: NTIS HC A08/MF A01 CSCL 09/2

This report describes the results of a twelve-month study, supported under DCA Contract 100-80-C-0050, of a new speech digitization algorithm combining Time-Domain Harmonic Scaling (TDHS) and Adaptive Reidual Coding (ARC). The FORTRAN simulation of this system conducted as part of this study produces high quality speech reproduction at mediumband bit rates of 9.6 kb/s and 16 kb/s. This system also displays excellent robustness characteristics for channel bit error rates as high as 1% and for acoustic background noise. By basing the required pitch extraction on a three-level clipped signal, the hardware requirements for the system are kept modest. The combined algorithm has several features which become significant in a fuel system applications. Because the algorithm is a high performance, waveform matching algorithm, extremely good pervformance in the random configuration with other algorithms is anticipated. Since the technique is basically a waveform reconstruction technique, it will perform well on non speech signals such as in-band signaling and modem tones. Author (GRA)

ANTENNA

15 Oct. 1981 101 p refs Transl. into ENGLISH from Antenny (USSR), no. 13, 1971 p 3-48 and 56-70
(AD-A105521; FTD-ID(RS)T-0943-81) Avail: NTIS HC A06/MF A01 CSCL 20/14

Various investigations of antenna design and operation are presented. The design of phased annular antenna arrays of interacting radiators excited by a Butler circuit is discussed. The critical wave number and wave resistance of a coaxial line with a cross-shaped interior conductor are determined. In addition, the synthesis of difference direction patterns of spherical antennas is examined and the input resistance of a vibrator with a dielectric cover is calculated by the induced EMF method.

Finally, the calculation of the H-plane stepped joint of rectangular waveguides is discussed. M.G.

AN ADVANCED 500-MHZ-BANDWIDTH FIBER-OPTIC SIGNAL LINK FOR EMP AND GENERAL LABORATORY APPLICATIONS Technical Report, Sep. 1978 - Nov. 1979
James C. Blackburn Jul. 1981 29 p refs Sponsored in part by Defense Nuclear Agency
(AD-A105118; HDL-TR-1940) Avail: NTIS HC A03/MF A01 CSCL 17/2

Means have been found to control modal noise in a fiber-optic system using single-mode lasers. Laser coherence is reduced by dithering, and careful attention is given to fiber connections. These techniques, in combination with miniaturization, have produced a compact wideband analog fiber-optic link that is well suited to signal transmission where dielectric transmission is dictated by electrical noise, need for complete isolation, TEMPEST considerations, or a requirement for wide bandwidth. The optical transmitter has a volume of 550 cc, contains an optically remote-controlled 0- to 45-dB input attenuator and calibrator, and will operate for 2 hr on its internal batteries. Maximum input sensitivity is a few millivolts into 50 ohms, system risetime in 0.8 ns, and dynamic range is greater than 30 dB. Transmission distances up to kilometers are possible, although fiber dispersion will reduce bandwidth at long distances. Author (GRA)
